62.2	Cleaning and disinfection are performed on all surfaces in the classified area and SCA.	Yes		7
62.3	Cleaning is performed in the direction of clean to dirty areas.	Yes		7
62.4	Reusable cleaning tools are disinfected prior to and after each use.	Yes		7.1.2
62.5	Only sterile cleaning, disinfecting, and sporicidal agents are permitted for use in the PEC. ***Inspector note: If pharmacy utilizes non-ready to use (RTU) agents, they must be diluted with sterile water. Per USP, "Once opened, sterile cleaning and disinfecting agents and supplies (eg, closed containers of sterile wipers) and sterile 70% IPA may be reused for a time period specified as by the manufacturer and/or described in the facility written SOPs."***	Yes		7.1.1, 7.1.2
62.6	Only sterile supplies and equipment are permitted for use in the PEC. ***Inspector notes: Non-disposable cleaning tools or handles must be properly disinfected prior to entering the PEC and prior to use.***	Yes		7.1.1, 7.1.2

The National Association of Boards of Pharmacy (NABP) developed this inspection form for sole use by NABP and its member boards of pharmacy for inspection of facilities licensed by a member board. Disclosure of the form to or use of the form by a third party, other than a facility being inspected by NABP or a member board, is strictly prohibited without NABP's prior written permission or unless required by state law.

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare Rx of LA dba Infucare Rx of LA
e-Profile ID: 0
Inspection Date: 01/00/1900 - 01/16/2025

		Observation	Inspector Notes	USP Reference(s)
62.7	Compounding personnel are using the appropriate sterile cleaning, disinfecting, and sporicidal agents within the PEC.	Yes		7.1.1
62.8	Compounding personnel are using the appropriate cleaning and disinfecting procedures and techniques within the PEC. ***Inspector note: Per USP, "All cleaning, disinfecting, and application of sporicidal disinfectants must be documented according to the facility's SOPs"; "Cleaning must be performed in the direction of clean to dirty areas"; and when 70% sterile IPA is used, it is used last and allowed to dry. There are differing opinions on the best order of cleaning.*** ***Procedure includes using a sterile low-lint wiper to all surfaces. Allow surfaces to dry completely before beginning compounding.***	Yes		7.1.2 Box 7, Box 8
62.9	The manufacturer's directions or published data for the minimum contact time is followed for each of the cleaning, disinfecting, and sporicidal disinfectant used. ***Per USP, contact times should be included in the SOP based on the agent used.***	Yes		7.1.1 Box 7, Box 8
62.10	Sterile 70% IPA is applied to all surfaces in the ISO Class 5 PEC at the frequencies specified by USP during active compounding. ***Inspector note: Per USP <797>, sterile 70% IPA must be applied: immediately before initiating compounding procedures, to the work surface of the PEC at least every 30 minutes (if the compounding process takes 30 minutes or less), to the work surface of the PEC immediately after compounding (when the compounding process takes more than 30 minutes), after each batch or lot is completed, and after cleaning and disinfecting.***	Yes		7

Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.
- Recommend also pulling supervising personnel file.
- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).

Review five (5) personnel files and document your observations.
- For applicants seeking a Class E-S Non-Resident Sterile Compounding Inspection (Texas Sampling), review a total of 10 personnel records.
- *Note: long-term employees may not have initial training available, if this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.

Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed.
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.

Demonstrating Knowledge and Competency of Core Skills (Section 2.1)

USP requirements:
1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2).
2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas:
-Hand hygiene
-Garbing
-Cleaning and disinfection
-Calculations, measuring, and mixing
-Aseptic technique
-Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components)
-Use of equipment
-Documentation of the compounding process (eg, master formulation and compounding records)
-Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area
-Proper use of PECs
-Principles of movement of materials and personnel within the compounding area
3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3).
4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3).
5. All training and evaluations must be documented.

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Compounding SOPs	*Initial Training and Competency in Maintaining the Quality of the Environment	*Initial Training and Competency in Sterile Compounding Principles and Practices	Ongoing Training and Competency in Sterile Compounding Principles and Practices	Notes
				Compounders and Supervising Personnel: Initially and at least every 12 months Other Personnel (examples: persons who do not compound but clean/disinfect and restock or who perform in-process checks; persons who only compound immediate use): Initially and as defined by pharmacy SOPs

Inspector Instructions	Hand Hygiene and Garbing Competency Evaluation (Section 2.2)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information.	USP requirements: 1. The garbing and hand hygiene competency evaluation consists of a visual observation and gloved fingertip and thumb sampling (GFT) of both hands. 2. The initial competency evaluation consists of three (3) separate and complete hand hygiene observation, followed by a full garbing procedure and a GFT after garbing. The initial three (3) successful completions must be in succession—failure of any of the three (3) initial garbing competency evaluations requires repeat testing until personnel successfully complete three (3) evaluations in a row. 3. The pharmacy uses a microbiological growth media device (eg, plates, paddles, or slides) containing general microbial growth agar (eg, trypticase soy agar [TSA]) supplemented with neutralizing additives (eg, lecithin and polysorbate 80) that supports both bacterial and fungal growth. 4. The media device is incubated at 30°C-35°C for no less than 48h and then at 20°C-25°C for no less than an additional five days. 5. Failure is indicated by visual observation of improper hand hygiene and garbing procedures and/or GFT results that exceed the defined action levels. Action level after garbing: >0 cfu/total from both hands. 6. Documentation includes, at minimum: -Name of the person evaluated -Evaluation date and time -Media and components used including manufacturer, expiration date, and lot number -Starting temperature for each interval of incubation -Dates of incubation -Results (the number of cfu per hand must be recorded; microbial identification of the cfu is not required by the chapter for GFT) -Results of the evaluation and any corrective actions -Name of the observer and personnel reading and documenting the results

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Hand Hygiene and Garbing Visual Observation	*Initial GFT x 3 (Post hand washing and garbing)	Subsequent GFT (Post handwashing and garbing)	Documented Failures and Retraining Needs (If none, please mark as N/A)	Notes

Disclosure of the form to or use of the form by a third party, other than a facility being inspected by NABP or a member board, is strictly prohibited without NABP's prior written permission or unless required by state law.

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed.
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.
5. Document in notes if initial aseptic manipulation competencies are present in files (*unless long-term employee).

Aseptic Manipulation Competency (Section 2.3)

USP requirements:
1. Media-fill testing procedures simulate the most difficult compounding procedures encountered by personnel.
2. The pharmacy conducts media-fill testing as described in Box 2.
3. The final containers are incubated at 20°C-25°C and 30°C-35°C for a minimum of seven days at each temperature band.
4. Failure is indicated by visible turbidity or other visual manifestations of growth in the media in one or more container closure unit(s) on or before 14 days.
5. Immediately following the media-fill test, GFT is performed on both hands and inside of an ISO Class 5 PEC. Failure is indicated by visual observation of GFT results that exceed defined action levels. Action level after media-fill testing: >3 cfu/total from both hands.
6. Immediately following the GFT, a surface sample of the direct compounding area inside the PEC is performed in accordance with USP standards for surface sample monitoring and action levels. Action level ISO Class 5: >3 cfu/media device.
7. Failure in the media fill, GFT, or surface sampling constitutes an overall failure of the aseptic manipulation competency.
8. Documentation includes, at minimum:
-Name of the person evaluated
-Evaluation date and time
-Media and components used including manufacturer, expiration date, and lot number
-Starting temperature for each interval of incubation
-Dates of incubation
-Results (for GFT, the number of cfu per hand must be recorded and for surface samples, the number of cfu per sample must be recorded. Note: microbial identification of the cfu is not required for media-fill testing)
-Results of the evaluation and any corrective actions
-Name of the observer and personnel reading and documenting the results

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Aseptic Manipulation Visual Observation	Media-fill	GFT (post media-fill)	Surface Sampling (post media-fill)	Documented Failures and Retraining Needs (If none, please mark as N/A)	Notes

Section 9: Statement of Responsibility - MUST BE COMPLETED by an Authorized Person (NAC 639.945)

Statement of Responsibility

1. I am the Corporate Secretary and General Counsel (title) for InfuCare Rx, LLC (name of Pharmacy) and in that capacity, I am authorized to speak on the Pharmacy's behalf.
2. I understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be responsible for any violations of pharmacy law that may occur in the Pharmacy owned by such owner(s), shareholder(s), member(s), or partner(s).
3. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be named in any action taken by the Nevada State Board of Pharmacy against the Pharmacy.
4. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) cannot require or permit the pharmacist(s) in said Pharmacy to violate any provision of local, state, or federal laws or regulations pertaining to the practice of pharmacy.
5. I further understand and acknowledge that Nevada law requires that each pharmacy located inside the State of Nevada employ only pharmacists, intern pharmacists, pharmaceutical technicians, and technicians in training that are licensed by the Nevada State Board of Pharmacy. (NRS 639.100).
6. I further understand and acknowledge that Nevada law requires that each pharmacy located outside the State of Nevada engaged in providing pharmacy services into Nevada employs at least one pharmacist licensed by the Nevada State Board of Pharmacy who will be responsible for any prescription dispensed to a patient located in Nevada and responsible for any acts or omissions of pharmacy personnel who are not registered with the Board. (NRS 639.2328).

Section 8: Arrests, Detentions, Litigations, Arbitrations.	Yes	No
1. Have you ever been convicted of, or entered, a plea of guilty, guilty by mentally ill or nolo contendere to any criminal offense or civil violation, federal or state, for any reason whatsoever, regardless of the disposition of the event? (Except minor traffic citations.)		✓
2. If you answered "yes" to question 1, was the offense or violation related to drugs, including prescription drugs and/or controlled substances, the manufacturer or distribution of drugs or the practice of pharmacy?		
3. Have you ever had a civil or criminal record expunged or sealed by a court order?		✓
4. Have you, as an individual, member or a company, partner, or owner, director or officer of a corporation, ever been a party to a lawsuit as either a plaintiff or defendant (including any administrative proceedings before a licensing board) or of an arbitration as either a claimant or respondent? (Other than divorces.)		✓
5. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) been a party to a lawsuit (including any administrative proceedings before a licensing board), arbitration or bankruptcy?		✓
6. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer or director) ever appeared before any licensing agency or similar authority in or outside the State of Nevada for any reason whatsoever (including any disciplinary or board citation)?		✓
7. Have you ever been denied a personal license, permit, certificate or registration for a privileged, occupational or professional activity?		✓
8. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner member, officer or director) ever been refused a business license.		✓
9. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) ever surrendered a license, permit, certificate or registration relating to the pharmaceutical industry voluntarily or otherwise (other than upon voluntary closure of a manufacturer).		✓
10. Have you been diagnosed or treated for any mental illness, including alcohol or substance abuse, or physical condition that would impair your ability to perform the essential functions of your license?		✓

I certify under penalty of perjury that the information contained in this application is accurate, true and complete in all material respects. I understand that making any false representation in this application is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire application and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event this application is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

Sterile Compounding Questionnaire

Rev (09/11/2024)

This application cannot be returned by fax or email.
We must have an original signature to process.

Approval of this completed questionnaire is required for an existing pharmacy, new pharmacy and/or out-sourcing facility applicant who wish to engage in preparing, compounding, dispensing, and furnishing sterile compounded products to Nevada patients or consumers.

Please provide a thorough response to the questions below and provide any necessary supporting documents.
-For a new pharmacy or out-sourcing facility applicant, submit this completed form with your application.
-For an existing pharmacy, send the completed form to the address indicated above.

Section 1: General Information

Pharmacy Name: InfuCare Rx, LLC

NV Pharmacy or Outsourcing facility license # (if applicable): PH04244

Physical Address: 2540 Market Street, Ste. 1

City: Aston State: PA Zip: 19014

Mailing Address (if different from physical address): P.O. Box 2578

City: Secaucus State: NJ Zip: 07096

Telephone: 877-202-6017 Toll Free # (NAC 639.708, NRS 639.23286): 877-202-6017

Fax: 877-278-1544 Contact Email: licensing@infucarerx.com

Website: www.infucarerx.com

Nevada Business License # (if applicable) N/A

Supervising/Managing Pharmacist Name (NRS 639.220): Andrew Wee

Supervising/Managing Pharmacist NV Pharmacist Registration #: 22276

Name of Designated Person(s) as defined by revised USP-797 guidelines: Scott Bell, Sherilyn Veder, Thomas McCool

Email of Designated Person(s): sbell@infucarerx.com, sveder@infucarerx.com, tmccool@infucarerx.com

Telephone of Designated Person(s): 877-202-6017

Section 2: Sterile Compounding Questions (Use a separate piece of paper if additional space is needed.)

1. What risk level sterile compounding will your facility be performing (check all that apply)?

   ☑ Category 1 ☑ Category 2 ☐ Category 3

If you marked "**Category 3**", you must also complete **section 4**.

2. If compounding Category 2 products is the location performing sterility and endotoxin testing (if required) to obtain extended beyond-use dates? ☐ Yes ☑ No

3. If compounding Category 2 products is the location performing aseptically processed CSPs or terminally sterilized CSPs? **No** ☐ Aseptic ☐ Terminal

4. Is the pharmacy following the new garbing requirements listed in the revised USP-797 guidelines? ☑ Yes ☐ No

5. When was the most recent certification for the ISO classified areas? 8/5/25 Clean Room #1, 9/3/25 Clean Room #2

6. What is the frequency of the recertification for the ISO classified areas? Every 6 months

7. Were there any follow-up items required from the most recent certification report? ☑ Yes ☐ No

8. If preparing Category 2 or Category 3 CSPs from non-sterile starting components are the pre-sterilization procedures such as weighing and mixing completed in an ISO Class 8 or better environment? N/A ☐ Yes ☐ No

9. If compounding Category 1 CSPs and Category 2 CSPs how often is surface sampling of all classified areas and pass-through chambers conducted? Monthly

10. Will you be performing sterile hazardous drug compounding? ☐ Yes ☑ No

If you marked "**Yes**", you must also complete **section 3**.

11. List the sterile compounded products that you will be compounding for Nevada patients or consumers:
Amikacin Sulfate, Ampicillin Sodium, Avycaz, Azithromycin, Aztreonam, ceFAZolin Sodium, Cefepime HCl, cefOXitin, Sodium, cefTAZidime, cefTRIAXone , DAPTOmycin, Ertapenem, Gentamicin Sulfate, IMIPENEM/CILASTATIN, Meropenem, Micafungin Sodium, MYCAMINE, Nafcillin, Oxacillin Sodium, Penicillin G Potassium, PENICILLIN G, POTASSIUM, PFIZERPEN, PIPERACILLIN SODIUM/TAZOB, TEFLARO, Tigecycline, Unasyn, Vancomycin HCl, Zerbaxa, TPN, Hydration

12. What laboratory performs your sterility or endotoxin testing?

Name: N/A

Address: _____

City: _____ State: _____ Zip: _____

Telephone: _____

13. What is your procedure for visual inspection of compounded sterile products?

We visually inspect each compounded sterile product under a black and white light. The visual inspection is done once the compounded sterile product is prepared (and again prior to shipping if stored in the refrigerator immediately after compounding).

14. How often do you perform glove fingertip and medial fill testing?

Every 6 months

15. Describe your initial and ongoing training program for all personnel performing sterile compounding:

Initially, staff members are trained to ensure qualification in compounded sterile preparations. The knowledge check is done via SoleSource training and the competency is completed via hands on visual observations. Ongoing training is done annually for knowledge check via SoleSource, and visual observation competencies via Simplifi. Additionally, gloved fingertip and thumb sampling and media fill is done every 6 months.

16. Describe the cleaning procedure for your primary and secondary engineering controls, including the frequency of cleaning and the names of cleaning, disinfectant, sporicidal, and/or deactivation and decontamination agents used:

A daily cleaning is done using a germicidal disinfectant (sterile TB1-3300) at all ISO 5 and ISO7 area, high tough areas, interior surfaces, pass through, work surfaces, floors,and sink. All the listed areas are then wiped using sterile Isopropyl Alcohol 70%. A monthly cleaning is done using a sproficidal agent (Peridox RTU) in all the areas for daily cleaning, ceilings, walls, doors, equipment outside PEC, storage bin, and furniture surfaces.

17. Who performs the sterile compounding process at your facility?

Compounding staff includes anyone that has completed all parts of the initial and onboarding training.

18. Who is responsible and accountable for the sterile compounding process at your facility?

Designated Person

19. If products are shipped/mailed, what shipping conditions are used to ensure product safety/efficacy?

The products are shipped in packaging to maintain the refrigerated temperature requirements. Ice bricks and bubble wrapping is also used to maintain the product efficacy.

Section 3: Sterile Hazardous Compounding Questions (Complete this section ONLY if you be performing Sterile Hazardous Compounding.)		
1. What type of primary engineering controls will you be using in your facility? N/A - we do not dispense any hazardous compounded medications		
2. Are you complying with all USP 800 guidelines?	Yes	No
3. Have your employees who compound with hazardous drugs signed an acknowledgement that they understand the risks associated with this process?	Yes	No
4. Is your BSC or CACI vented 100% to the outside?	Yes	No
5. Do you have a negative pressure buffer room at your facility?	Yes	No
6. Will you be compounding with antineoplastic HDs or HD API?	Yes	No
7. If yes, are the drugs stored in an externally ventilated, negative pressure room?	Yes	No
8. Will you be utilizing a closed system transfer device?	Yes	No
9. If yes, list the name of the device: N/A - we do not dispense any hazardous compounded medications		

10. What information is provided to the patient or consumer on the proper handling and disposal of hazardous drugs products/containers? N/A - we do not dispense any hazardous compounded medications

11. Describe your initial process for training new employees prior to compounding sterile hazardous drugs?
N/A - we do not dispense any hazardous compounded medications

Section 4: Sterile Category 3 Compounding Questions (Complete this section ONLY if you will be performing Category 3 Compounding.)

1. List the specific Category 3 sterile products that your facility compounds:
N/A - we do not dispense any category 3 compounds

2. What is the frequency for ongoing garbing, gloved fingertip and thumb sampling, and media fill testing for compounding personnel?
N/A - we do not dispense any category 3 compounds

3. Is the pharmacy meeting all of the additional garbing requirements for compounding Category 3 CSPs as defined by the revised USP-797 guidelines? Yes No

4. What is the frequency for completing volumetric active air sampling?
N/A - we do not dispense any category 3 compounds

5. What is the frequency for completing surface sampling? N/A - we do not dispense any category 3 compounds		
6. What is the frequency for using sporicidal agents? N/A - we do not dispense any category 3 compounds		
7. Is an endotoxin test performed for all products compounded from one or more nonsterile component?	Yes	No
8. Is the BUD assigned supported by stability data obtained using a stability-indicating analytical method?	Yes	No

I certify under penalty of perjury that the information contained in this form is accurate, true and complete in all material respects. I understand that making any false representation in this form is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire form and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event the form is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

(1) Cross out the unused lines. Keep the biennial inventory record at the licensed-registered location. (2) Schedule I and II drugs must be separated from all other drugs or placed on a separate form. (3) Unopened containers of same substance, manufacturer, volume, and concentration can be listed together. (4) List open containers as separate line items. (5) Measure in weight (powder or crystals) or volume (liquids) or number of units (tablets or capsules). (6) For opened containers: If the substance is listed in Schedule I or II, make an exact count or measure of the contents. (7) Finished form refers to the strength and form of the item as commercially prepared.

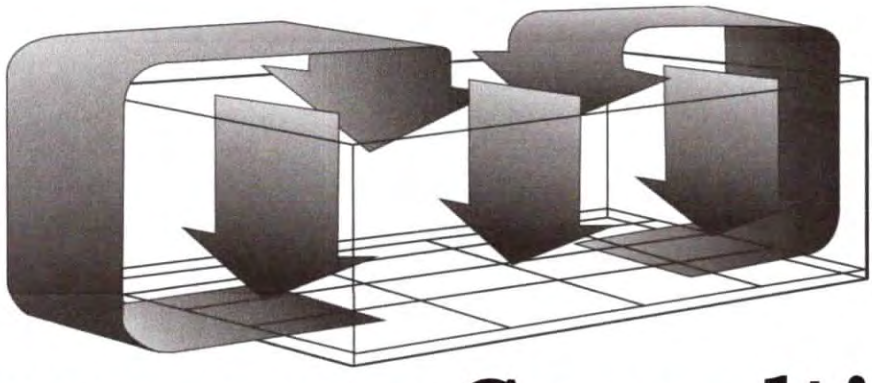
InfuCare RX Cleanroom Testing Report



August 2025

Performed At:

InfuCare RX
2540 Market Street, Suite 1
Aston, Pennsylvania 19014

Prepared For:

Mr. Thomas McCool

Cleanroom Consulting Services

P.O. Box 394, Douglassville, Pennsylvania 19518
(800) 970-7629
(610) 385-1826 FAX
WWW.CleanroomConsulting.Com

Executive Summary

Cleanroom testing was completed on August 5, 2025 within the InfuCare RX cleanroom. This scheduled testing is part of a semi-annual rotation. This type of program is designed to furnish an operating baseline of readings. Any abnormal fluctuations from that baseline can be corrected quickly without a contamination crisis. The following points of interest are noted.

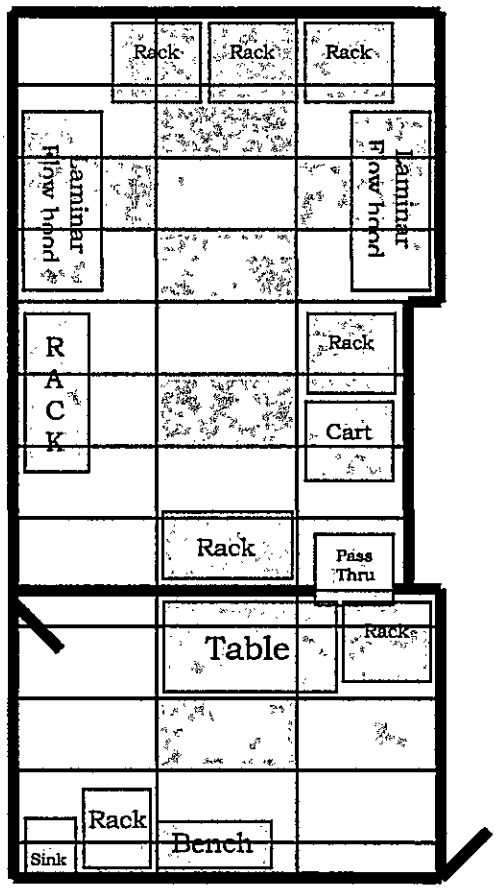
1. Testing was performed in the "Operational" cleanroom condition with the Labconco and Cleatech laminar flow hoods operating. "Operational" is the term used for testing a cleanroom in the state at which all machinery is operational and production workers are present. Up to two workers plus the tester were present.

2. Average temperature recorded in the main cleanroom was 66.62°. This average is considered generally acceptable. A room temperature average of 63° – 70° (USP-797) degrees Fahrenheit, depending upon product specifications, gowning requirements and worker comfort is recommended. It is recommended that the control system be evaluated by a qualified mechanical company.

3. Average relative humidity recorded in the main cleanroom was 41.05%. This average is considered to be generally on the slightly dry side of acceptable. The guidance in ISO Document 14644-4 "Cleanrooms and Associated Controlled Environments – Part 4 refers to a typical set range of less than 65.00% but higher than 30.00%. Generally, a relative humidity average of approximately 45.00% should be maintained (Unless product protection warrants otherwise (USP-797 less than 60%). Humidity varied during testing. It is recommended that the control system be evaluated by a qualified mechanical company.

4. All readings were taken with the Labconco and Cleatech laminar flow hoods operational with the white lights on. The UV light of the Labconco laminar flow hood was verified as functional.

5. Viable microbiological samples, both air and surface, were collected in the clean areas. A set of negative controls were also evaluated. All viable microbiological samples were taken in the "dynamic" condition.



6. All equipment utilized for testing has been calibrated according to manufacturer recommendations and NIST traceable standards. Calibration certificates included.

7. All drawings are accurate representations but not to exact scale.

8. It is hypothesized that the Repeater Pump has previously damaged the HEPA filter in the lower right corner of the Cleatech laminar flow hood. These minor damages have been able to be repaired, thus far. This should be monitored. Care must always be taken to not to come in contact with the HEPA filter face in either laminar flow hood.

10. Airflow visualization studies using smoke were performed within the laminar flow hoods using a visual smoke. These studies were recorded and are included as attachments to this report.

11. It appears that indoor shoes are now being used as the standard clean area footwear.

Main Cleanroom

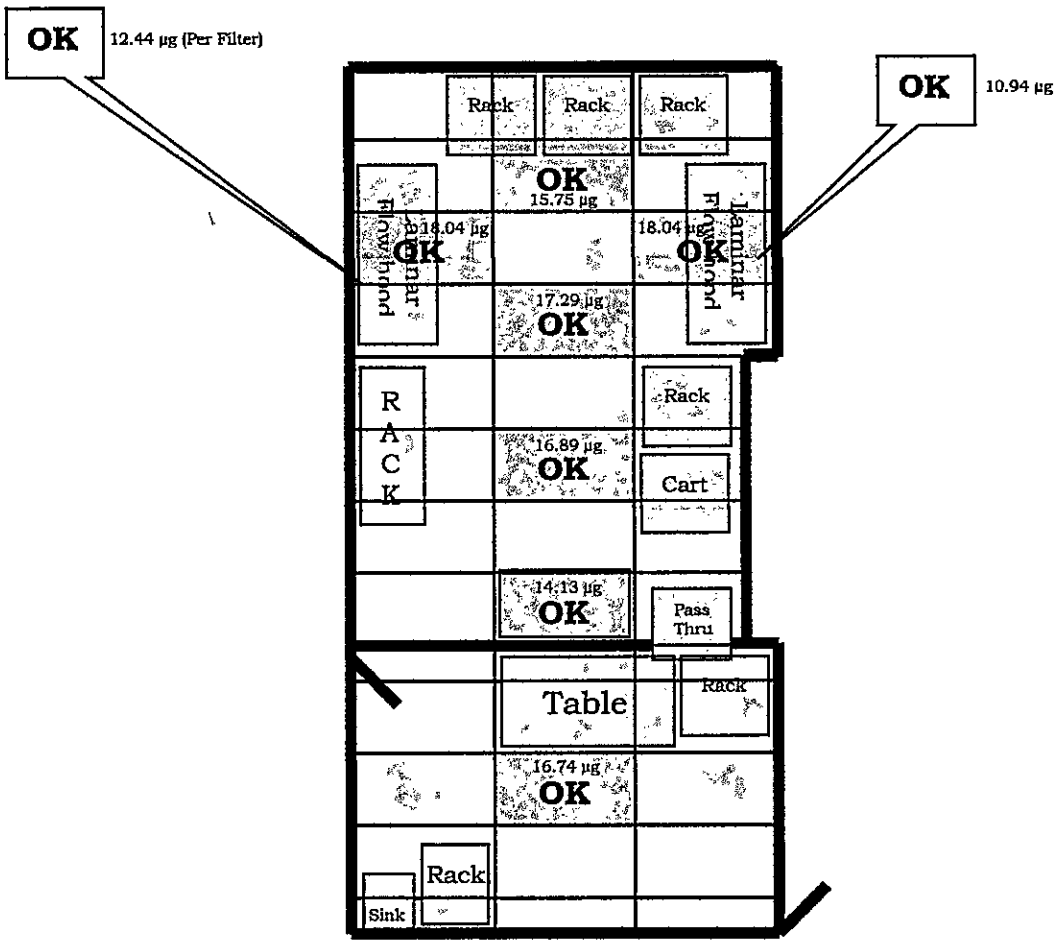
Gowning

HEPA Filter Leak Test Summary

PURPOSE: To verify that all HEPA filters, filter housings and mounting frames located in the clean areas are free from leakage.

PROCEDURE: The instruments were set up and operated per manufacturers' instructions. PAO aerosol generator output was introduced upstream of the HEPA filters and measured or calculated to establish leakage limits. The sample probe of the photometer was used to scan the entire downstream side of the HEPA filters, mounting frames and filter housing at a traverse rate of not more than 2 inches per second in slightly overlapping strokes. The probe was 1 inch in area and had a sample rate of 1 cubic foot per minute/28.3 liters per minute.

SPECIFICATIONS: Aerosol penetration shall not exceed 0.01% of the upstream concentration at any point. Repairs of any leakage greater than 0.01% of the upstream air are made using silicone caulking and/or filter media paper. The size of any repair shall be less than 5% of the filter face area and less than 1.5" in length or width.



INSTRUMENTATION: 1 CFM/28.3 LPM Aerosol Photometer, Hand Held Sampling Probe, PAO aerosol Generator, Air Compressor

Model: ATI, TDA-2E
Calibration Date: August 9, 2024

INSTRUMENTATION SPECIFICATIONS: Penetration is measured in percent (%). The internal reference is 10% ± 1.0%. The sample flow rate is 28.3 LPM (1 CFM) ± 2.8 LPM.

RESULTS:

No leakage was detected in the HEPA filters located in the clean areas.

Airflow Velocity Test Summary

PURPOSE: To determine the velocity of air in feet per minute (FPM) delivered through each HEPA filter.

PROCEDURE: The air data multimeter and/or hot wire thermo-anemometer was used to sample the air flow rate on the appropriate test grid pattern of the in-ceiling HEPA filters and laminar flow hoods. The total room air volume was then calculated in cubic feet of air by multiplying the average filter velocity by the effective filter area. The uniformity range was calculated by taking the average air velocity and determining the percentage of individual readings that are ± 20% of that average.

INSTRUMENTATION: Electronic Air Data Multimeter, Hot Wire Thermo-Anemometer, ring stand

Model: Shortridge, ADM-870
Calibration Date: May 12, 2025

Model: TSI, 9535
Calibration Date: August 19, 2024

INSTRUMENTATION SPECIFICATIONS: Air Data Multimeter - Air velocity is measured in feet per minute (FPM) or meters per second (M/S) and corrected for local or standard density. The measurement range is 25 to 30,000 FPM with a pitot tube and 25 to 10,000 FPM with the Velprobe. The measurement range using the Velgrid is 25 to 2500 FPM. Accuracy is ±3% of readings and ±5% from 25 to 10,000 FPM.

Hot Wire Thermo-Anemometer - Air velocity is measured in feet per minute (FPM) or meters per second (M/S). The measurement range is 0 to 6,000 FPM with a 1 FPM resolution. Accuracy is ±3.0% of readings or ±3.0 FPM, whichever is greater.

RESULTS:

Room/Area	Velocity (FPM)	± 20% Uniformity Range	Air Volume (CFM)	Air Changes Per Hour (ACH)
Main Cleanroom	113.83	100.00%	4,961.65	197.95
Gowning Area	119.50	100.00%	868.17	67.83

Airflow Velocity Test Summary (Continued)

PURPOSE: To determine the velocity of air in feet per minute (FPM) delivered through each HEPA filter.

PROCEDURE: The air data multimeter and/or hot wire thermo-anemometer was used to sample the air flow rate on the appropriate test grid pattern of the in-ceiling HEPA filters and Labconco laminar flow hood. The total room air volume was then calculated in cubic feet of air by multiplying the average filter velocity by the effective filter area. The uniformity range was calculated by taking the average air velocity and determining the percentage of individual readings that are ± 20% of that average.

InfuCare RX Cleanroom

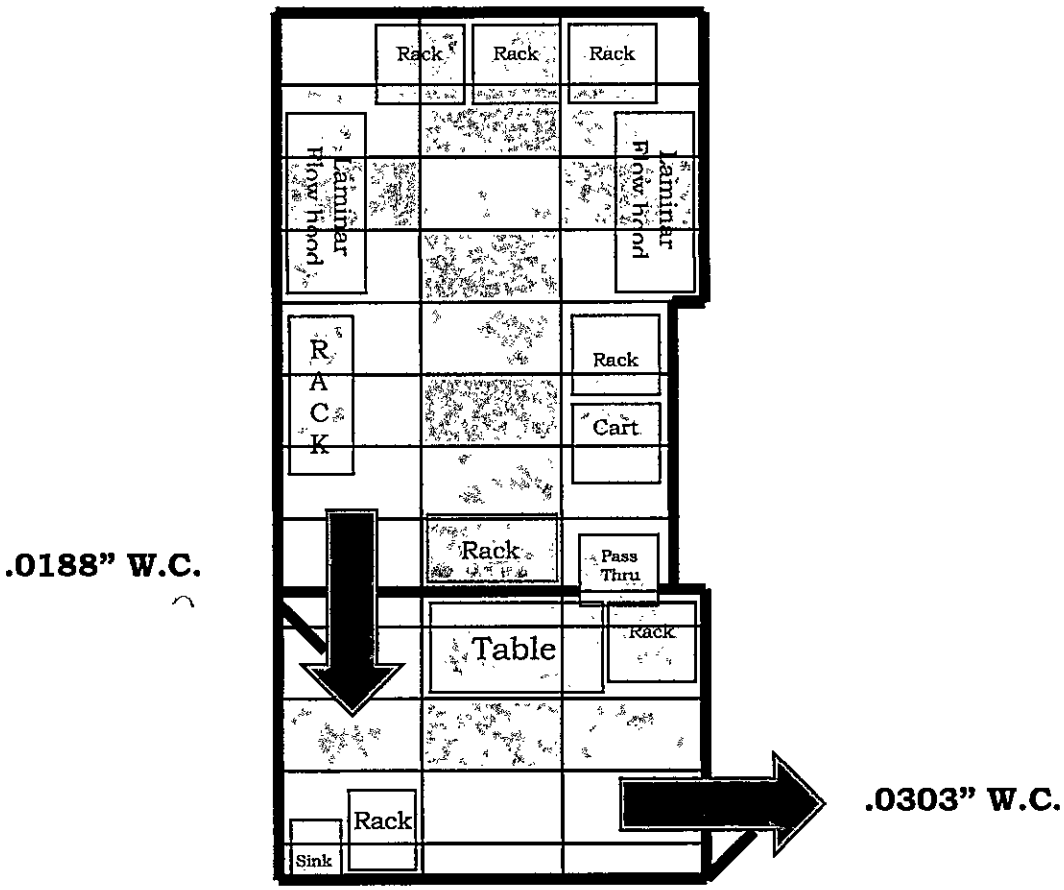
Aston, Pennsylvania

DATE: August 5, 2025

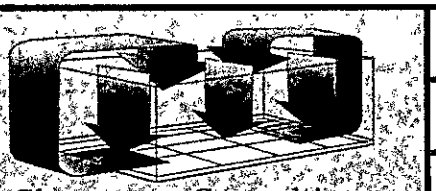
Room Pressurization Test Summary

PURPOSE: To verify that the cleanroom systems can maintain a specified positive pressure in inches water column (W.C.) to all outside surrounding less clean areas.

PROCEDURE: With all doors closed and the air handling system operating at design capacity, the pressure differential (in inches water column) between the cleanrooms and surrounding areas were measured. The direction of pressurization and the differential pressure to the nearest 0.0001" W.C. was recorded.



INSTRUMENTATION: Electronic Air Data Multimeter



Model: Shortridge, ADM-870
Calibration Date: May 12, 2025

INSTRUMENTATION SPECIFICATIONS: Pressure differential is measured in inches of water column (W.C.) or Pascals (Pa). The measurement range is from 0.0001 to 60.00 inches W.C. Maximum safe pressures are 20 psid (900% full scale) and 60 psia common mode. Accuracy is ±2% of readings ± one digit.

RESULTS:

From Room/Area:	Relative to:	Reading
Main Cleanroom	Gowning Room	+.0188" W.C.
Gowning Room	Gowning Entrance	+.0303" W.C.

Airborne Particle Count Test Summary

PURPOSE: To measure the airborne particle levels in microns (µ) within the clean areas in order to classify the area per ISO 14644-1 and/or ISO 14644-2.

PROCEDURE: The clean areas were divided into grids of equal proportion. The particle counter was set up and operated per manufacturers instructions. Particle counts were taken at the 0.5 micron size and larger and sampled at a rate of 1 cubic foot per minute/28.3 Liters per minute. All measurements were made under ambient conditions with no additional induced challenge. The particle counter probe was placed in the center of each test grid at approximately 36" above the floor using the tripod and sampled for one minute. The particle count at each grid location was recorded.

INSTRUMENTATION: 1 CFM/28.3 LPM laser particle counter, sampling probe, tripod

Model: Met One 2408
Calibration Date: August 7, 2024

INSTRUMENTATION SPECIFICATIONS: Particles are measured in microns (µ). The flow rate is 1 CFM/28.3 LPM ± 10% with less than a 5% coincidence loss at 400,000 particles per cubic foot/liters per minute of sampled air.

RESULTS:

A statistical analysis was calculated at the 0.5µ size for the following areas tested as described in ISO 14644-1 and/or ISO 14644-2. All readings were taken in the "Operational" condition.

Room/ Area	Size	Average Particle Count	Standard Deviation	Standard Error	95% Upper Confidence Limit	Classification
Main Cleanroom						
F^3	0.5µ	32.13	49.87	17.63	65.63	(Class 10,000)
M^3	0.5µ	1134.01	1760.50	622.43	2316.63	ISO-7
Gowning Area						
F^3	0.5µ	490.80	244.81	109.48	720.72	(Class 100,000)
M^3	0.5µ	17325.24	8641.96	3864.80	25441.32	ISO-8

Airborne Particle Count Test Summary (Continued)

PURPOSE: To measure the airborne particle levels in microns (µ) within the clean areas in order to classify the area per ISO 14644-1 and/or ISO 14644-2.

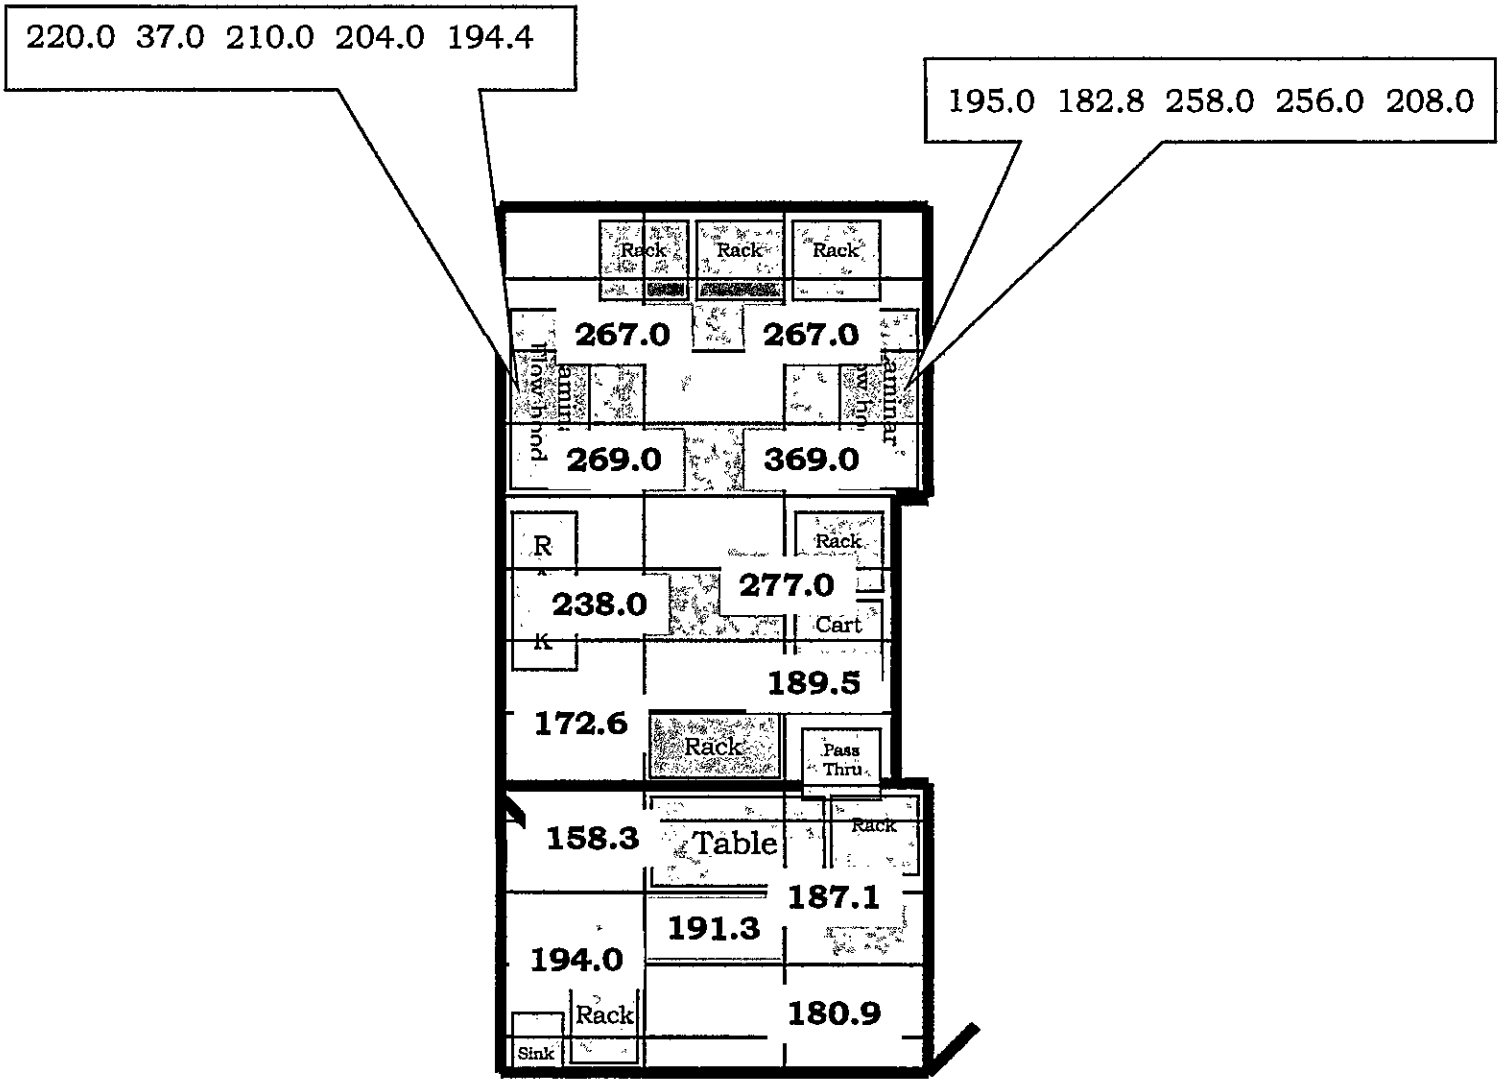
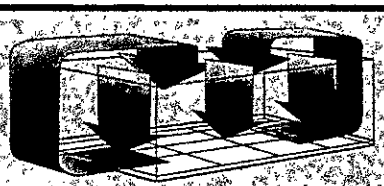
Lighting Level Test Summary

PURPOSE: To determine the intensity of the fluorescent lights in foot candles (FC) at work level height within the clean areas.

PROCEDURE: A preliminary operating period of the lighting preceded this test in order to obtain proper seasoning of the fixtures. The clean areas were divided into grids of equal proportion. The illumination meter was placed in the center of each test grid at work level height (40"). The light levels were recorded.



INSTRUMENTATION: Digital Illumination Meter



Model: Extech 401027
Calibration Date: August 2, 2024

INSTRUMENTATION SPECIFICATIONS: Light levels are measured in foot candles (FC). The accuracy is ±5% plus 4 digits full scale.

RESULTS:

Room/Area	Average Lighting Level (Foot Candles)
Main Cleanroom	257.39
Gowning Area	182.32
Labconco Laminar Flow Hood	219.96
Cleatech Laminar Flow Hood	213.08

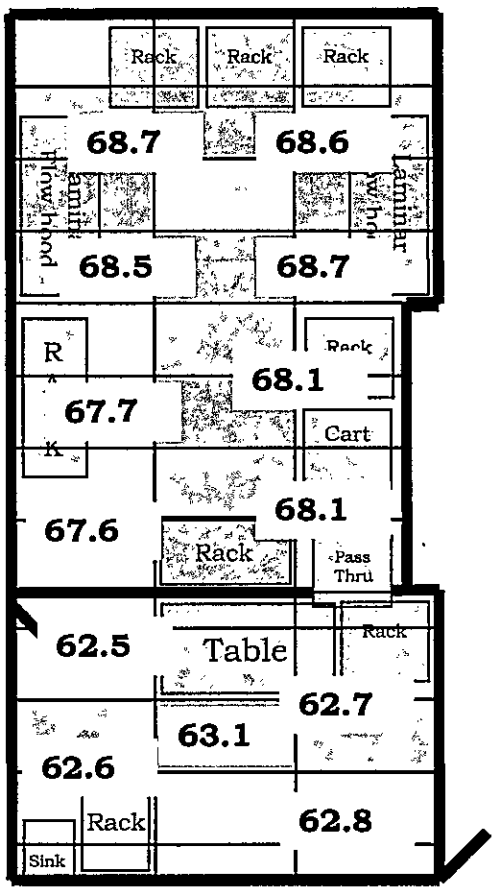
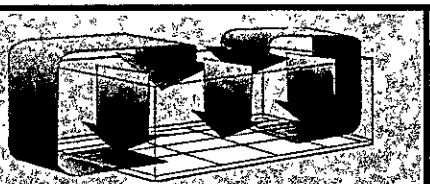
Sound Level Test Summary

PURPOSE: To measure the sound levels in decibels in the "A" weighting mode (dBA) within the clean areas.

PROCEDURE: The clean areas were divided into grids of equal proportion. The sound level meter was set to record in the "A" weighting mode. The sound level meter was placed in the center of each test grid at a height of 40" above floor level. The sound levels were recorded.



INSTRUMENTATION: Sound Level Meter



Model: Extech SL-510
Calibration Date: March 12, 2025

INSTRUMENTATION SPECIFICATIONS: Sound levels are measured in decibels within the "A" weighting mode, most sensitive to the human ear (dBA). The accuracy is ±1 dB at 1kHz frequency (Class 2 Standards, IEC 61672-2013 and ANSI/ASA S1.2/Part 1).

RESULTS:

Room/Area	**Average Sound Level (dBA)**
Main Cleanroom	68.25

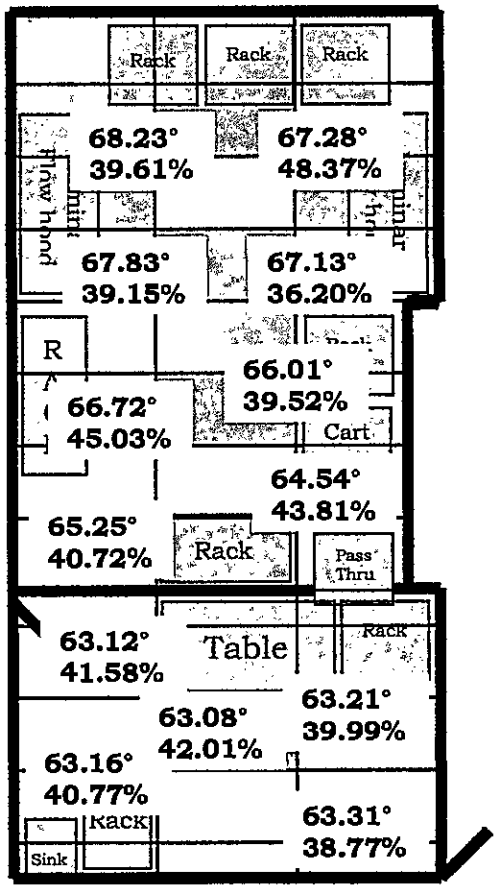
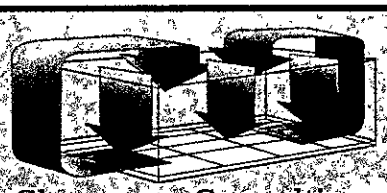
Temperature and Humidity Test Summary

PURPOSE: To verify the capability of the cleanroom air handling equipment to maintain temperature (°F) and relative humidity (%) within the design specifications.

PROCEDURE: The clean areas were divided into grids of equal proportion. The temperature and humidity probe was placed into the center of each test grid. Readings were taken at a distance of 36" above the floor. The temperature and humidity levels were recorded.



INSTRUMENTATION: Thermohygrometer



Model: Vaisala MI-70 With HMP-76 Probe
Calibration Date: January 6, 2025

INSTRUMENTATION SPECIFICATIONS: Temperature accuracy is ±.2°C at 20°C. Relative humidity accuracy is ±1% RH at 0% RH to 90% RH and ±1.7% RH at 90% RH to 100% RH.

RESULTS:

Room	Temperature (°F)	Humidity (%)
Main Cleanroom	66.62°	41.05%
Gowning Area	63.18°	40.82%

Viable Microbiological Sample Summary

PURPOSE: To verify the levels of viable microbiological bacteria and fungi present at each plotted location.

PROCEDURE: Select clean area locations were chosen for sample collection. The air sampling equipment was setup per manufacturers instructions and placed into the center of each sample location. Tryptic soy irradiated standard collection contact plate collection agar was used. 1000 liters of air was sampled at all locations.

INSTRUMENTATION: PBI SAS Microbiological Sampler, tryptic soy contact plate agar

Model: PBI SAS Super 180
Calibration Date: April 1, 2025

INSTRUMENTATION SPECIFICATIONS: Airborne micro-organisms are collected on microbiological agar by impaction produced by aspiration. The nominal airflow rate is 100 liters per minute.

RESULTS:

Mass Flow Meter	4040 0112 010		300552827	11-20-2024

Traceability Statement:

CIH Equipment Company Inc. certifies that the instrument listed above meets or exceeds manufacturing tolerance limits as stated in the referenced test procedure (unless otherwise noted). This instrument has been calibrated using standards with accuracies traceable to the National Institute of Standards and Technology. CIH Equipment Company Inc. calibration system is A2LA accredited to ISO/IEC 17025-2017, ANSI/NCSL Z540-1-1994. This report may not be reproduced, except in full, without the written approval CIH Equipment Company Inc. This calibration was done by comparing the unit under test to the listed calibration standards, there was no sampling used in this calibration. The result reported herein apply only to the calibration of the items described above and no limitations of use apply to the calibration unit. A PASS (in tolerance) or FAIL (out of tolerance) result indicates all measured values fall within or outside unmodified limits. The statement of compliance does not take the reported measurement uncertainty into account. In addition, reported uncertainties do not include instabilities due to transportation, usage, passage of time etc.

PO #: Customer Eqpt ID#: Calibration Due Date: _____

This instrument has been calibrated using Calibration Standards which are traceable to NIST (National Institute of Standards and Technology). Test accuracy ratio is 4:1 for pressures and temperature. Quality Assurance Program and calibration procedures meet the requirements for ANSI/NCSL Z540-1, ISO 17025, MIL-STD 45662A and manufacturer's specifications. Calibration accuracy is certified when meters are used with properly functioning accessories only. All Uncertainties are expressed in expanded terms (twice the calculated uncertainty). This report shall not be reproduced, except in full, without the written approval of Shortridge Instruments, Inc. Results relate only to the item calibrated. For limitations on use, see Shortridge Instruments, Inc. Instruction Manual for the use of AirData Multimeters. Procedure used: Procedure for Differential Pressure, Absolute Pressure and Temperature Recalibration of AirData Multimeters SIP-CP02 Revision: 30 Dated: 04/04/16.

There were no additions to or deviations from the specified calibration procedure during the calibration process.

Any calibration due date shown is specified by the customer.

The enclosed ADM Calibration Equipment form(s) that lists the Standards for Pressures, Low Velocity, and Temperature is/are an integral part of this calibration and must remain with this Certificate of Recalibration. There may be more than one such form included that pertains to this calibration.

Any additional information required pertaining to this calibration or to any repairs performed may be included in other documentation. If applicable, these documents may include, but not be limited to an AirData Multimeter Recalibration Notes form, and/or a Repair Record Notes form.

NOTES: _____

AIRDATA MULTIMETER CERTIFICATE OF RECALIBRATION

Customer ID: 011733 S/N: M94962

Customer: CLEANROOM CONSULTING SERVICES City: DOUGLASSVILLE State: PA

As-Received Model #: ADM-870 Converted to Model #: Order #: R250408

PO #: Customer Eqpt ID#: Calibration Due Date: _____

This instrument has been calibrated using Calibration Standards which are traceable to NIST (National Institute of Standards and Technology). Test accuracy ratio is 4:1 for pressures and temperature. Quality Assurance Program and calibration procedures meet the requirements for ANSI/NCSL Z540-1, ISO 17025, MIL-STD 45662A and manufacturer's specifications. Calibration accuracy is certified when meters are used with properly functioning accessories only. All Uncertainties are expressed in expanded terms (twice the calculated uncertainty). This report shall not be reproduced, except in full, without the written approval of Shortridge Instruments, Inc. Results relate only to the item calibrated. For limitations on use, see Shortridge Instruments, Inc. Instruction Manual for the use of AirData Multimeters. Procedure used: Procedure for Differential Pressure, Absolute Pressure and Temperature Recalibration of AirData Multimeters SIP-CP02 Revision: 30 Dated: 04/04/16

Rated Accuracy: 0.03° F	Range: 33° F to 158° F		Resolution: 0.01° F	Uncertainty: < 0.023° F

Total combined Uncertainty for MultiTemp and TemProbe testing : ≤ 0.046° F

This form may include information for measuring and test equipment that has been removed from service while undergoing a scheduled calibration. The detailed information for the measuring and test equipment is not removed from this form while the equipment is not in service. This form is updated with the new calibration information prior to the measuring and test equipment being placed back into service.

This form has a revision number and revision date in the bottom left corner which may be changed when equipment information is updated. This form also has a date in the bottom right corner that is updated when calibration dates and calibration due date information on this form require an update. If this form is updated during a customer's calibration, two of these forms will be included, one for the As-Received Test and one for the Final Test.

This form must remain with the calibration documents corresponding to the Order Number and Meter Serial Number referenced on page 1.

Note(s):
Service report as an attachment.

The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k = 2,which for a normal distribution corresponds to a coverage probability of approximately 95 %. The measurement results are traceable to the international system of units (SI) through national metrology institutes (NIST USA, MIKES Finland, or equivalent) or via ISO/IEC 17025 accredited calibration laboratories.

VAISALA

CALIBRATION CERTIFICATE

This certificate may only be reproduced in full, except with the prior written permission by the issuing laboratory.

Vaisala is ISO 9001 and ISO 14001 certified company.

Certificate Number BOS250210024

Calibration note(s):

The humidity calibration was done by comparing the instrument humidity readings to the reference humidity generator readings in the Vaisala laboratory's permanent facility. The reference humidity readings were calculated based on two-pressure humidity generation principle using the measurement results of saturator pressure and temperature and calibration chamber pressure and temperature.

The temperature(s) of the instrument was calibrated by comparing the instruments's temperature readings to a reference thermometer.

Before measurements the instrument was allowed to stabilize to the conditions of the laboratory with power supply on. The purge function was run before the calibration if the instrument has the chemical purge option.

The measurement results were obtained from the measured values or the results were calculated from the measured values by using adjustment coefficients. The reference and instrument readings are averages of at least five independent observations. All relative humidity readings below freezing are compliant to WMO humidity calculation method. The dew point readings are frost point readings when dew point is below 0 °C if the readings are given as a dew point.

The 0 %rh humidity was measured in dry nitrogen gas or dry gas using the humidity meter as a reference if the 0 %rh humidity point was measured

The calibration uncertainty represents the situation at the time and conditions of calibration. When using the instrument at different conditions and at different time the effect of the conditions and stability of the instrument shall be evaluated separately. The calibration results and the statement of conformity with specification/acceptance limit relate only to the calibrated instrument and the calibration points.

The statement of conformity is based on simple acceptance, whether the calibration result is within or outside the manufacturer's specification/acceptance limits. The calibration uncertainty is not taken into account in the statement of conformity. The probability of accepting a non-conforming result or rejecting a conforming result can be as large as 50 % with this acceptance rule when the calibration result is close to the acceptance limit.

Pass or - = The calibration result is equal or within the manufacturer's acceptance limit.
Fail or * = The calibration result is outside the manufacturer's acceptance limit.
N/A = The calibration result acceptance limit is not specified.

DESCRIPTION	QUANTITY
ISO 17025 Accredited Calibration & Full PM Service SAS Super 180, Serial #: 10-D-06805; Head #: 4	1

Service Notes:

- The unit was received, inspected and found to be within manufacturer specifications (177.9 L/m); please see attached calibration certificate for details.
- Performed ISO 17025 accredited calibration in wind tunnel.
- Performed full PM checklist, tightened hardware, stress tested battery, battery charger and all components.

Please contact Customer Support at support@biosci-intl.com or 301-231-7400 with any questions.

Additional service-related notes: Please see footnote below regarding +/-2% interchangeability of heads and media types.

Bioscience International certifies that the above described instrument conforms to the original manufacturer's tolerances for the parameters listed (not applicable to As Found data) & has been calibrated in accordance with ISO 17025:2017 guidelines under accredited conditions (pursuant to Bioscience International's A2LA certificate 5699.01) using standards whose accuracies are traceable to the International System of Units (SIs) through the U.S. National Institute of Standards & Technology or international equivalent, have been verified with respect to instrumentation whose accuracy is traceable to NIST, or are derived from accepted values of physical constants. CMC test uncertainty is +/-2.2%. Instruments are calibrated with a test uncertainty ratio of 4:1 or greater whenever possible. In all cases, statistical methods are used to minimize uncertainty using the best commercially available methods. The decision rule used is Simple Acceptance as defined in ILAC GB with a measurement uncertainty value that will never exceed 50% of the tolerance unless otherwise specified. Voltage readings are for preventative maintenance purposes & not part of the calibration; values other than voltage, temperature, pressure, & air velocity are calculated values. All sampling heads may be used interchangeably with +/-2% equivalence as long as they have the same hole count/size and are kept clean/free of obstructions. Calibration results relate only to the items listed above; the instrument should be recalibrated prior to switching media sizes (e.g., from 90mm Petri dishes to 55mm contact plates or vice versa).

† Bin excluded from ISO 17025 calibrations.

TSI Incorporated does hereby certify that the above described instrument conforms to the manufacturer's specifications (not applicable to As Found data) and has been calibrated using standards whose accuracies are traceable to the International System of Units (SI) through the National Institute of Standards and Technology within the limitations of NIST's calibration services or have been derived from accepted values of natural physical constants or have been derived by the ratio type of self-calibration techniques. TSI is registered to ISO 9001:2015. TSI is accredited to ISO 17025:2017 by ANAB Certificate Number AC-2850.

The aforementioned uncertainty values represent expanded uncertainty and are based on a standard uncertainty multiplied by a coverage factor k=2 providing a confidence level of approximately 95%. This report may not be reproduced unless permission is obtained in writing from the TSI calibration service department issuing this report. The unit is found to have passed when the readings are within the specification limits of the device as presented as the allowable range stated with each measurement above. The customer shall assess the results and uncertainty in order to determine if the results meet their needs.

This certificate indicates Traceability to standards provided by (NIST) National Institute of Standards and Technology and/or a National Standards Laboratory.

A Test Uncertainty Ratio of at least 4:1 is maintained unless otherwise stated and is calculated using the expanded measurement uncertainty. Uncertainty evaluation includes the instrument under test and is calculated in accordance with the ISO "Guide to the Expression of Uncertainty in Measurement : (GUM). The uncertainty represents an expanded uncertainty using a coverage factor k=2 to approximate a 95% confidence level. Conformance based on Simple Acceptance as a Decision Rule, as defined in ILAC G8, with a measurement uncertainty value that will not exceed 50% of the tolerance unless otherwise stated by the customer. The results contained herein relate only to the item calibrated. This certificate shall not be reproduced except in full, without written approval of Control Company.

Nominal=Standard's Reading; As Left=Instrument's Reading; In Tol=In Tolerance; Min/Max=Acceptance Range; ± U=Expanded Measurement Uncertainty; TUR=Test Uncertainty Ratio; Accuracy=±(Max-Min)/2; Min=As Left Nominal(Rounded) – Tolerance; Max= As Left Nominal(Rounded) + Tolerance;

Nicol Rodriguez

Nicol Rodriguez, Quality Manager

Note :

Maintaining Accuracy:

In our opinion once calibrated your Digital Barometer should maintain its accuracy. There is no exact way to determine how long calibration will be maintained. Digital Barometer change little, if any at all, but can be affected by aging, temperature, shock, and contamination.

Recalibration:

For factory calibration and re-certification traceable to National Institute of Standards and Technology contact Control Company.

Issue Date : 03 Jul 2024

Sterile Water 1000mL	00264-7850-00	B. BRAUN MEDICAL	J5H772	11/30/2027	1

COMPOUNDING INSTRUCTIONS

For each cefTRIAXone 2gm SDV** vial, reconstitute with 19.2 ml Sterile Water for Injection for a resulting concentration of 0.1 Gm/ml.
Total Prep: 7 vials of cefTRIAXone 2gm SDV** x 2 Gm = 14 Gm in 140 mls of solution (0.1 Gm/ml). 20 mls per dose x 7 doses = 140 mls.
1 dose(s) per container. For each container: add 20 mls (2 Gm) reconstituted solution to each Syringe 30mL Luer-Lok Tip #302832 container.Ceftriaxone 2gm IV Syringe

Physical Appearance of final preparation: Yellow, clear solution in syringe.

This Product was prepared within an ISO class 5 Laminar air flow hood or ISO class 7 clean room and proper aseptic procedures were used at all times to prevent bacterial contamination. BUD of 10 days determined by USP 797 and ESPD 7th edition.

Business Licensure Information for State of Residence and Federal
(board of pharmacy, state controlled substance, DEA, FDA, etc)

License/Registration Agency	Business Name on License/Registration	Registration/License Type	Registration/License Number & Expiration Date
Pennsylvania State Board of Pharmacy	Infucare RX	Pharmacy	PP482586 & 8/31/2027
Drug Enforcement Administration	Infucare RX	Controlled Substance - Pharmacy	FI5571256 & 11/30/2027

Inspector Notes: List states in which Non-Resident licenses are held: AL, AK, AZ, AR, CO, CT, DE, DC, FL, GA, HI, ID, IL, IN, IA, KS, KY, LA, MA, MD, MI, MN, MS, MO, MT, NE, NV, NH, NJ, NM, NY, NC, ND, OK, OR, RI, SC, SD, TN, UT, VT, VA, WA, WV, WI, WY. The pharmacy does not distribute or dispense to Puerto Rico. There is insulin stocked in the pharmacy, and the DP states the pharmacy has not ordered ReliOn insulin. The DP stated there are no platforms used that are a marketplace for pharmacies to buy, sell, or bid on short date and overstock prescription products, and no price labels for any such platforms were observed. The pharmacy does not compound semaglutide, tirzepatide, survodutide or retatrutide products. The pharmacy does not repackage biological products, but does provide biological products in a ready use formulation (ex., Immunoglobulin).

Documents collected as part of the Inspection.
To obtain a copy of these documents please contact the facility directly. They are not included in the final report.

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
General Pharmacy			
1.00	Is the PIC (or pharmacy manager/director) present for the inspection? *If no, list the pharmacist on duty.*	Yes	
2.00	Is the PIC employed full-time at the pharmacy? *List the number of hours worked per week onsite.*	Yes	The PIC is scheduled on site for 40 hours per week.
3.00	Are there any other businesses located at this address? *If yes, note type of business and name.*	No	
4.00	Does the pharmacy have any other websites? *Provide list of other names/URLs.*	No	
4.01	Does the pharmacy hold .pharmacy verification?	No	
5.00	Do any other websites link to the pharmacy website (such as a provider, or other affiliate)? *If yes, list.*	No	
6.00	Does the pharmacy allow patients to securely enter/update profile and medical information through the website (such as through a secure patient portal)?	Yes	
7.00	Are patients able to order or refill prescriptions through the website? *If yes, describe.*	Yes	Patients are able to request refills through the Health.Infucare.com app for patients who have opted into using this service. Approximately 20% patients use the app.
8.00	Are photographs allowed during the inspection (no PHI)?	Yes	
9.00	List of additional personnel **interviewed as part of the inspection, including name and title:**		Thomas McCool, Area General Manager; John Hopkins, National Director of Pharmacy Operations; Jessica Seefried, National Audit Manager; Kathi Seefried, National Audit Manager; Sejal Patel, Clinical Manager; Aaron Callahan, National Materials Management Specialist; Roshni Tailor, Pharmacist; Chris Fantini, Pharmacy Technician; Sherilyn Vader, Pharmacy Technician Designated Person; Andrew Wee, PIC

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
Types of Practice Additional Questions	**If any part of a question is no, enter "No" and explain the observation.**		
10.00	If the pharmacy mails or delivers filled prescriptions (patient specific, labeled with patient name when it leaves the pharmacy), are any of the deliveries to a provider or facility for administration to the patient? *If yes, indicate volume or percentage of deliveries going to a provider or facility in this state, and volume or percentage of deliveries going to a provider or facility in other states.*	Yes	Estimated volume stated as 15% dispensed for administration of the total dispensed in PA.
11.00	Does the pharmacy provide prescription products to a provider or facility for "office use" (not pursuant to a prescription received prior to delivery, not patient specific, not labeled with the patient name)? *If yes, indicate volume or percentage provided to a provider or facility within this state, and volume or percentage provided to a provider or facility in other states.*	Yes	The pharmacy does not distribute prescriptions within PA. The pharmacy provides IV immunoglobulin to one physician clinic in Nevada which accounts for 100% provided to other states since the pharmacy does not distribute prescriptions to other states.
12.00	Does the pharmacy provide prescription products to providers or facilities (including other pharmacies) as a wholesale distributer (sold to the provider or facility for their use, administration, or providing/dispensing to patients)?	No	
13.00	If yes, is the percentage of product distributed at wholesale to providers or facilities within this state less than 5%? *Indicate actual percentage and if the percentage is based on number of units, number of prescriptions, dollar volume of total sales or dollar volume of prescription sales.*	N/A	
14.00	If yes, is the percentage of product distributed at wholesale to providers or facilities in other states less than 5%? *Indicate actual percentage and if the percentage is based on number of units, number of prescriptions, dollar volume of total sales or dollar volume of prescription sales.*	N/A

		Observation	Notes
22.00	Does the pharmacy have any additional restrictions, limitations, or waivers with regards to any federal licenses or registrations (FDA, DEA, etc)? *If yes, note the agency and additional item.*	No	
23.00	Has the pharmacy been inspected or visited by the DEA? *If yes, indicate the inspection/visit date and note any deficiencies. Also note how frequently the pharmacy is inspected/visited by the DEA.*	Yes	DEA visited the pharmacy with no formal inspection on 11/2/2022. No deficiencies and no frequency is in place for repeat inspections.
24.00	Has the pharmacy been inspected by the FDA? *If yes, indicate the inspection date and note any deficiencies, significant correspondence, or if a "483" was issued and date, and response and date. Also note how frequently the pharmacy is inspected by the FDA.*	No	
25.00	Does the pharmacy hold any accreditations or certifications? *If yes, indicate which and collect most recent date of survey.*	Yes	URAC accreditation inspection for Specialty Pharmacy Accreditation 5.0 Accreditation was conducted on 9/18/2024. ACHC Home Infusion Therapy Accreditation inspection was conducted on 10/29/2024.
26.00	Has the pharmacy held any accreditations or certifications in the past that they no longer hold? *Provide a list and the reasons for such.*	No	
27.00	Does the pharmacy perform patient lab testing such as blood glucose tests, cholesterol tests, etc? *Verify that the lab director is current (usually the PIC is the lab director named). If yes, record the Clinical Laboratory Improvement Amendments (CLIA) waiver information, expiration date, and the name of lab director listed.*	No	
28.00	Does the pharmacy maintain all required records, including but not limited to prescription files and invoices on site? *Record how long records ere kept. If not on site, where?*	No	Records are kept in paper form for 3 years on-site and then the records are transferred to Iron Mountain for 10 years. Records are kept electronically indefinitely.

		Observation	Notes
Personnel	**If any part of a question is no, enter "No" and explain the observation.**		
30.00	Are all pharmacist, pharmacy intern, and pharmacy technician (if applicable) licenses or registrations with the board current and in good standing? *Describe how this is documented.*	Yes	Infucare Rx corporate office has a licensing compliance team to review the status of all personnel and their licensures and registrations.
31.00	Is there a process for periodic verification of validity of licenses? *Describe the process.*	Yes	Infucare Rx corporate office has a licensing team to review the status of all personnel and licensing and registrations are validated each month.
32.00	If pharmacists are providing patient services that require additional training or certification, are they appropriately trained and certified? *(Immunization, CPR, MTM, etc.). Mark NA if no patient services that require additional training/certification. If yes, list certifications and if current?*	N/A	
33.00	Does the pharmacy maintain the proper technician-to-pharmacist ratio? *Mark N/A if not required by resident state. Indicate ratio used and the maximum number of staff who work at the same time.*	N/A	
Facility and Security	**If any part of a question is no, enter "No" and explain the observation.**		
34.00	Does the pharmacy have a working security/alarm system in place? *If yes, describe.*	Yes	The pharmacy has ADT for security and alarm systems for all doors, motion sensors, glass break, and cameras. Verkada provides the personnel badge system for the exterior doors and pharmacy doors.
35.00	Are Schedule II controlled substances secured in a locked cabinet or safe? *If not, describe how controlled substances are secured or stored.*	N/A	The pharmacy does not have any controlled substances on-site.
36.00	Are there contingency plans in the event the pharmacy cannot be secured? *Describe how the drug products will be secured and handled.*	Yes	A pharmacist would come on site and secure the medications and have the medications. The operations team would provide guidance depending upon the incident. A pharmacist would remain on-site until medications are secured or transferred to the Pine Brook, NJ location.

		Observation	Notes
39.00	Is temperature in the drug storage area maintained to provide controlled room temperature of 20° to 25°C (68° to 77 °F), or more restrictive if warranted by specific drug product storage requirements? *Describe. Record the temperature at the time of inspection.*	Yes	The temperature of the drug storage area at inspection was 68.1°F.
39.01	Is temperature monitoring in place to detect any excursions (24/7) by continuous monitoring or retroactive detection using min/max? Temperature records are maintained. *If yes, describe the process*	Yes	The pharmacy uses Temp Stick data probes to continuously monitor temperatures. The probes are set to a range of 68° to 77 °F for controlled room temperature. If there is an excursion en email and text alert is sent to the PIC, Area General Manager and assigned pharmacy staff. Alerts will go off every hour until resolved. For extended excursions the PIC and pharmacist will come on site to relocate medications to an area with a suitable temperature.
39.02	Are excursion action plans in place including evaluating excursion effects on drug product integrity?	Yes	
40.00	Are the refrigerator and freezer restricted to drug products only (no food)?	Yes	
41.00	Does the pharmacy have a process for how the refrigerator temperature is monitored for excursions 24/7? *If yes, describe the process. Indicate range. How are excursions detected? How long are records maintained?*	Yes	The pharmacy uses Temp Stick data probes to continuously monitor temperatures. The probes are set to e range of 36° to 46 °F for refrigerator temperature. If there is an excursion an email and text alert is sent to the PIC, Area General Manager and assigned pharmacy staff. Alerts will go off every hour until resolved. For extended excursions the PIC and pharmacist will come on site to relocate medications to an area with a suitable temperature.
41.01	Is the temperature in the refrigerator within the USP range (2°-8°C or 36°-46 °F) or as specified by FDA approved labeling for drug product storage? *Record the temperature of the refrigerator at the time of inspection.*	Yes	Refrigerator #1: 39.6°F; Refrigerator #2: 41.0°F; Refrigerator #3: 40.9°F; Refrigerator #4: 38.4°F; Refrigerator #5: 43.6°F; Refrigerator #6 37.4°F; Refrigerator #7: 39.0°F; Refrigerator #8: 39.2°F; Refrigerator #9: 41.5°F; Refrigerator #10: 40.8°F; Refrigerator #11: 41.7°F; Refrigerator #12: 39.3°F

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
42.00	Does the pharmacy have a process for how the freezer temperature is monitored for excursions 24/7? *If yes, describe the process. Indicate range. How are excursions detected? How long are records maintained?*	N/A	Ice packs are stored in the freezers for shipping.
42.01	Is the temperature in the freezer within the USP range (between −25° to −10°C or −13° to 14 °F) or as specified by FDA approved labeling for drug product storage? *Record the temperature of the freezer at the time of inspection.*	N/A	
43.00	Are there contingency plans in the event of power outage or refrigerator/freezer failure? *Describe process.*	Yes	An alert will go off and staff will determine if materials can be moved to an alternative refrigerator on-site or if the products need to be sent to the Pine Brook, NJ location.
44.00	Are there contingency plans in the event of heating or air conditioning failure? *Describe processes.*	Yes	The pharmacy has a redundant HVAC unit for each cleanroom suite. The pharmacy has a preventative maintenance program with Oliver Mechanical Services for each HVAC unit. The pharmacy has a contractile agreement with Oliver Mechanical for emergency services. If HVAC units incidents cannot be addressed in a timely manner all drugs will be moved to the Pine Brook, NJ location.
45.00	Is there a plan of action if there are any temperature or humidity excursions to determine if the integrity of the products has been compromised?	Yes	For temperature and/or humidity excursions, historical information is reviewed to determine the estimated time out of specification. All drugs in the affected area(s) will be quarantined and reviewed for viability and integrity with the manufacturer of each drug prior to use.
46.00	Does the pharmacy utilize any automated apparatuses for prescription processing/counting (such es robotics, Baker cells, etc)? *List numbers and types.*	Yes	The pharmacy has 4 Baxter repeater pumps for sterile compounding and 2 Apex TPN compounding devices.
46.01	If yes, do they have and follow policies and procedures addressing cross-contamination and identification of drug products?	Yes

Verified Pharmacy Program® Inspection Form

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
Product Receipt and Inventory	**If any part of a question is no, enter "No" and explain the observation.**		
47.00	Does the pharmacy have a documented process for establishing sources (vendors) of prescription drugs? *Describe.*	Yes	The InfuCare RX Corporate Compliance Purchasing Team establishes the agreements with vendors.
47.01	Does the pharmacy purchase all prescription drugs directly from the manufacturer?	Yes	
47.02	Does the pharmacy purchase (obtain) prescription drugs from other pharmacies? *If yes, list pharmacy source information, and circumstances leading to the purchase.*	Yes	The pharmacy participates with internal drug transfers between other InfuCare RX pharmacy locations.
47.03	Does the pharmacy purchase (obtain) prescription drugs from wholesale distributors (non-manufacturer sources)? *List non-manufacturer sources.*	Yes	Wholesalers: Cencora (Amerisource Bergen), McKesson, CuraScript.
47.04	Does the pharmacy require wholesale distributor sources to purchase prescription drugs directly from the manufacturer? *If yes, how is this verified?*	Yes	Tracelink warehouses the transaction information and the data in Tracelink is used in addition to the transactions documents from the wholesalers and manufacturers.
47.05	Does the pharmacy purchase drugs from wholesale distributors that purchased the drug from other wholesale distributors? *If yes, Describe the due diligence steps to determine the source's legitimacy and legitimacy of the drugs sold by the vendor. (For instance, does the pharmacy examine transaction histories and limit the number of movements of drugs between wholesale distributors, and look for pharmacies in the supply chain?)*	No	
47.06	Does the pharmacy determine that all sources listed on transaction histories have requisite state licensing? *If yes, describe the process.*	Yes	The pharmacy procurement department has connected with each manufacturer to verify they are licensed in PA.

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
87.02	"Quality-Related Event" (QRE) is defined to mean any departure from the appropriate dispensing of a prescribed medication that is or is not corrected prior to the delivery and/or administration of the medication including (but not limited to): 1. a variation from the prescriber's prescription drug order such as incorrect drug, strength, form, or patient; or inadequate or incorrect packaging, labeling, or directions; 2. a failure to identify and manage over-utilization or under-utilization; therapeutic duplication; drug-disease contraindications; drug-drug interactions incorrect drug dosage or duration of drug treatment; drug-allergy interactions; or clinical abuse/misuse. 3. packaging or warnings that fail to meet recognized standards, the delivery of a medication to the wrong patient, or the failure to detect and appropriately manage a significant actual or potential problem with a patient's drug therapy.	Yes	
87.03	There is documentation of initial/ongoing (at least yearly) review and training of all pharmacy employees on the CQI program and processes. *For example, may be formal training or reviewed at a yearly meeting.*	Yes	
88.00	**Documentation of QREs** starts as soon as possible, but no more than three days, after determining their occurrence. *Indicate if documentation/forms are hard copy or electronic.*	Yes	The pharmacy uses an electronic documentation system Healthicity.
88.01	Documentation includes all the pertinent data about the prescription involved including personnel involved at each step.	Yes	
88.02	Documentation includes documenting the type of QRE details and how/who discovered the QRE.	Yes	
88.03	Documentation incudes possible contributing factors such as day and time the QRE occurred, number of pharmacists and technicians on duty, prescription volume that day, equipment failure, or other factors affecting work-flow at the time.	Yes

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
88.04	Documentation includes steps taken to remediate including communications with the patient and the provider, and if the medication was ingested, disposition of the patient.	Yes	
89.00	**QRE data** collected is analyzed to assess causes and any contributing factors (root cause). *Indicate who performs the analysis and frequency (with each event, weekly, monthly, quarterly, etc).*	Yes	Thomas McCool, Area General Manager oversees the QRE events. Data is rolled up to the corporate level to assess trends for remediation to assess if the QRE is local or a national event. The roll up data are reviewed quarterly by the Quality Management Team at corporate.
89.01	The pharmacy uses the findings of the analysis to formulate an appropriate response and develop pharmacy systems and workflow processes designed to prevent QREs and increase good outcomes for patients.	Yes	
89.02	For pharmacies utilizing a drug formulary, a periodic review of such formulary is undertaken to ensure that appropriate medications are being offered/selected in the best interest of patients.	N/A	
90.00	**Quality meetings** are held at least annually by staff members of the pharmacy to consider the effects on quality of the pharmacy system due to staffing levels, workflow, and technological support.	Yes	
90.01	The meeting reviews data showing evidence of the quality of care for patients and develops plans for improvements to increase good outcomes for patients.	Yes	
90.02	Improvements or changes made are evaluated for performance to measure the effectiveness of the CQI program.	Yes

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Notes
91.00	**Reporting:** Incidents of QREs are reported to a nationally recognized error reporting program, an outside peer review committee, or a patient safety organization. *Indicate which organizations are reported including if the pharmacy reports QREs to the board of pharmacy.*	Yes	All local QRE events are reported to the corporate Quality Management Team. The corporate Quality Management Team would assess if a QRE event would require reporting the PA BOP.
91.01	Adverse events are reported to the appropriate entities such as the board of pharmacy, MedWatch, FDA, VAERS, etc?	Yes	
91.02	Incidents involving malfunctioning or defective medical equipment or devices (blood glucose meters, DME, injection devices, etc) are documented and reported to the manufacturer or distributor.	Yes	
92.00	**Quality Self-Audits** are performed by the pharmacy at least quarterly (and upon change in PIC) to determine whether the occurrence of QREs has decreased and whether there has been compliance with preventative procedures, and to develop a plan for improved adherence with the CQI program in the future.	Yes	
93.00	**Consumer Surveys** are conducted at least yearly of patients who receive pharmaceutical products and services at the pharmacy. A statistically valid sampling technique may be used in lieu of surveying every patient. Each pharmacy should use the results of its consumer survey to evaluate its own performance at a particular time and over a period of time.	Yes	
94.00	**Patient Complaints** are documented, tracked, and investigated as appropriate and the information is used as part of the CQI program.	Yes

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
	Standard Operating Procedures (SOPs) for Compounded Sterile Preparations (CSPs)		**Please note NABP did not review each SOP for alignment on USP <797>. The SOP(s) described below is/are a reflection of any self-assessment completed by the pharmacy and/or shared with the inspector during the onsite inspection.**	
1.0	Does the pharmacy have a designated person(s) who meets the requirements in compliance with USP <797> standards? ***Inspector note: Per USP, "The compounding facility must designate one or more individuals (ie, the designated person(s)) to be responsible and accountable for the performance and operation of the facility and personnel in the preparation of CSPs and for performing other functions."*** *If no, go to compliance statements.*	Yes		1.1.3, 2
1.1	The designated person(s) (for the QA program) has the training, experience, responsibility, and authority to perform the duties required of them.	Yes		18
1.2	The designated person(s) is responsible and accountable for the performance and operation of the facility. ***Per USP, "The designated person(s) is responsible for ensuring that each area related to CSP preparation meets the classified air quality standard appropriate for the activities conducted in that area. The designated person(s) must also ensure that the ISO Class 5 areas are located, operated, maintained, monitored, and certified to have appropriate air quality."***	Yes		2, 4.2, 4.5

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
1.3	The designated person(s) is responsible for personnel performing sterile compounding or other related functions (eg, quality checks and prescription dispensing of compounded preparations).	Yes		2, 17
1.4	The designated person(s) reviews facility SOPs at least every 12 months to ensure that they reflect current practice and such review is documented.	Yes		2, 17
1.5	The designated person(s) ensures that SOP revisions are implemented.	Yes		2, 17
1.6	The designated person(s) communicates all SOP revisions to all impacted personnel. ***Inspector note: USP <797> recommends that personnel should also document acknowledgment and communication of SOP changes and revisions.***	Yes		2, 17
1.7	The designated person(s) ensures that personnel demonstrate competency in performing every procedure that relates to their job function.	Yes		2, 17
1.8	The designated person(s) ensures that corrective actions are taken if problems, deviations, out-of-range results, failures, or errors are identified. ***Inspector note: Per USP, "Data collected in response to corrective actions must be reviewed to confirm that the actions taken have been effective."***	Yes		2, 5, 12

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
2.0	Has the pharmacy developed and implemented SOPs that describe sterile compounding processes and other support activities in compliance with USP <797> standards? ***Inspector note: In order for this to be answered yes, all topics must be addressed if applicable to their business practices.*** *If no, document "missing" in Inspector Notes* *If yes, document the name, number, and version of each SOP in the Inspector Notes.*	Yes		17
2.1	**Scope of Practice:** Types of CSPs that are prepared (eg, immediate use, allergenic extracts, Category 1, Category 2, Category 3). Roles and responsibilities of the designated person(s).		SOP 9.4 Scope of Services and PM; SOP 401 Sterile Preparation; SOP 402 Establishing Categories; SOP 613 Designated Person	1.5
2.2	**Personnel Training and Evaluation:** Description of initial and ongoing training and competency for the designated person(s), compounding personnel, personnel with direct oversight of compounding personnel, and personnel who only perform restocking or cleaning, and disinfecting duties outside of the primary engineering control (PEC). Description of media-fill testing procedures, hand hygiene and garbing competency, and aseptic manipulation competency. Training and competency assessment of personnel on all sterilization methods and equipment used by the facility. Frequency of training is defined.		SOP 604 Competency Testing in Aseptic Manipulation	2, 2.2, 10 Box 1, Box 2, Table 2, Table 3

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
9.2	Only Category 1 CSPS are prepared in a SCA. ***If pharmacy is compounding Category 2 or Category 3 CSPs in a SCA, inspector should answer this statement as no and collect photographs and copies of the MFR, CR, and provide a description of their observations in the Inspector Notes.***	N/A		4.2.1, 4.2.3 Table 5
9.3	The SCA is located away from unsealed windows, doors that connect to outdoors, and traffic flow. ***Inspector note: Per USP, "strong air currents from opened doors, personnel traffic, or air streams from the HVAC system can disrupt the unidirectional airflow of an open-faced PEC."***	N/A		4.2.1
9.4	The SCA is located away from environmental control challenges and separate from areas not related to compounding (ie, restrooms, warehouses, food preparation areas).	N/A		4.2.1
9.5	A visible perimeter establishes the boundaries of the SCA. ***Inspector note: Per USP, the SCA is defined as "a designated space, area, or room that is not required to be classified and is defined with a visible perimeter. The SCA must contain a PEC and is suitable for preparation of Category 1 CSPs only." USP further defines a perimeter as "a visible demarcation (such as a door, walls, or visible marking on the floor) that defines the SCA or AECA." The perimeter will be defined in the pharmacy's SOPs. Tape or an alternative method may be used to define this visible perimeter, since this is not a classified space.***	N/A		4.2.1 Glossary

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
9.6	Access to the SCA is restricted to authorized personnel. ***Inspector note: Per USP, authorized personnel includes personnel involved in compounding processes, maintenance, and cleaning.***	N/A		4.2.1
9.7	Free-standing humidifiers/dehumidifiers and air conditioners are not located within the perimeter of the SCA.	N/A		4.2
9.8	Only furniture, equipment, and other materials necessary for performing compounding activities are permitted in the compounding area. ***Inspector note: Per USP, these items should be low-shedding, easily cleaned, and disinfected. This applies to items within the perimeter around the Primary Engineering Control (PEC).***	N/A		4.5
9.9	Shipping cartons or other corrugated or uncoated cardboard are not allowed in the SCA.	N/A		4.5
9.10	The SCA and all surfaces (walls, floors, counters, equipment) are clean, uncluttered, and dedicated to compounding.	N/A		4.2.1, 4.3.2
9.11	The sink is located inside the SCA or in close proximity and is located at least one meter away from the PEC.	N/A		4.4
9.12	The area within one meter of the PEC is dedicated only for sterile compounding (eg, not storage, hand hygiene, donning and doffing garb, or other highly particle-generating activities, such as patient care).	N/A		4, 4.2.1

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
9.13	If overhangs or ledges are present in the SCA, are they easily cleanable? ***If no, describe observations in Inspector Notes.***	N/A		4.2.1, 4.3.2
10.0	Are surfaces smooth, impervious, free from cracks and crevices, and non-shedding so they can be cleaned and disinfected? ***Inspector note: this is a recommendation by USP.*** ***If no, describe in comments Inspector Notes (eg, peeling of Formica countertops)***	Yes		4.3.2
11.0	Are surfaces resistant to damage from cleaning, sanitizing, and sporicidal agents used? ***Inspector note: this is a recommendation by USP.*** ***If no, describe in comments inspector observations (ie observed rust on preparation cart or flaking of particle board on shelving).***	Yes		4.2.1, 4.3.2
12.0	**Cleanroom Suite:** Does the pharmacy use a Cleanroom Suite (ISO-classified anteroom and buffer room) as a SEC in compliance with USP <797> standards for facility design and environmental control? ***Inspector note: Per USP <797>, a cleanroom suite is required if compounding any Category 2 and Category 3 CSPs.*** ***If no, go to compliance statements.*** ***If pharmacy only uses an SCA for Category 1 CSPs, inspector should answer question as N/A.***	Yes		4.1, 4.1.1, 4.1.2, 4.2.1, 4.3.1 Table 5

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
12.1	Access to the cleanroom suite is restricted to authorized personnel. ***Inspector note: Per USP, authorized personnel includes personnel involved in compounding processes, maintenance, and cleaning. Some examples pharmacies may use to demonstrate compliance with this statement (but are not specifically required by the chapter) include posting a sign or creating a badge access point for authorized personnel to enter the cleanroom suite.***	Yes		4.2.1
12.2	The facility is designed to afford a well-lit environment.	Yes		4.2, 4.2.1
12.3	The facility provides a comfortable working environment (eg, temperature and humidity settings so appropriate garb can be donned).	Yes		4.2.1
12.4	The anteroom and buffer room are separated from surrounding unclassified areas by fixed walls and doors.	Yes		4, 4.2.1
12.5	Controls are in place to minimize the flow of lower-quality air into the more-controlled areas. ***Inspector note: Per USP, "strong air currents from opened doors, personnel traffic, or air streams from the HVAC system can disrupt the unidirectional airflow of an open-faced PEC."***	Yes		4.2.1
12.6	Anterooms providing access to only positive pressure buffer rooms meet at least ISO Class 8 specifications. ***If the pharmacy has a negative pressure room, inspector should answer statement as N/A.***	Yes		4.1.2, 4.2.1

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
12.7	The anteroom provides access to a negative pressure room and meets at least ISO Class 7 specifications. ***If the pharmacy does not compound hazardous drugs, inspector should answer statement as N/A.***	N/A		4.1.2, 4.2.1
12.8	The buffer room, where the PEC is placed, meets ISO Class 7 or better air quality specifications. ***Inspector note: If the PEC is a pharmaceutical isolator, the buffer room must be at least ISO Class 8 air quality or better and an anteroom is not required. Per USP <797>, a pharmaceutical isolator is defined as an enclosure that provides HEPA-filtered ISO Class 5 unidirectional air operated at a continuously higher pressure than its surrounding environment and is decontaminated using an automated system. It uses only decontaminated interfaces or rapid transfer ports for materials transfer. A CAI or CACI is not a pharmaceutical isolator.***	Yes		4.1.2, 4.2.1, 4.2.3
12.9	Air supply to the anteroom and buffer room is introduced through HEPA filters in the ceiling.	Yes		4.2.1
12.10	Air returns are located low on the wall. ***If the pharmacy has a visual smoke study (as described in the USP chapter and compliance statement below), inspector should answer statement as N/A.***	Yes		4.2.1

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
12.11	A visual smoke study demonstrates an absence of stagnant air where particles can accumulate and is repeated if any equipment/placement changes when air returns are not located low on the wall. ***Inspector note: Per USP, "the smoke study, along with environmental monitoring, must be repeated whenever a change is made to the placement of equipment within the room or any other alteration is performed within the cleanroom suite that affects the quality of the air (eg, HVAC alterations, chapter of HEPA filter units)."*** ***If air returns are low on the wall, inspector should answer statement as N/A.***	N/A		4.2.1
12.12	The anteroom has a line of demarcation to separate the dirty side from the clean side or has two separate anterooms, a dirty anteroom and a clean anteroom. ***Describe observations for the type of line of demarcation in the Inspector Notes.***	Yes	The line of demarcation is a black and yellow tape.	4.2.1
12.13	Personnel enter the dirty side/room first from the unclassified area and the clean side/room is located closest to the buffer room.	Yes		4.2.1
12.14	All surfaces (ceilings, walls, floors, doors, door frames, fixtures, shelving, work surfaces, counters, and cabinets) are smooth, impervious, free from cracks and crevices, and non-shedding.	Yes		4.2.1, 4.3.1
12.15	Junctures between ceilings and walls and between the walls and floors are sealed.	Yes		4.2.1, 4.3.1

e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
12.24	The anteroom does not contain floor drains.	Yes		4.4
13.0	Are **PECs** used to prepare CSPs located in the appropriate space (eg, buffer room or SCA) for category types prepared in compliance with USP <797> standards? ***Inspector to review certification reports and observe compounding area(s) to evaluate.*** ***If no, go to compliance statements.***	Yes		4.2.1, 4.2.2, 4.2.3 Table 4, Table 5
13.1	All compounded sterile preparations (that are not for immediate use) are compounded in a PEC.	Yes		1.3, 4, 4.1.2
13.2	PEC is certified to maintain ISO 5 classification or better conditions during dynamic operating conditions. ***The inspector should only answer yes if the PEC has been certified within the past six months.***	Yes		4.2.2, 4.2.3, 5
13.3	The PEC is located out of traffic patterns and away from room air currents that could disrupt the intended airflow patterns inside the PEC. ***Review certification report.***	Yes		4, 4.2.2, 4.2.3
13.4	Placement of the PEC allows for cleaning around the PEC.	Yes		4.2.3
13.5	**Category 2 and Category 3:** PEC(s) are located in a cleanroom suite. ***If pharmacy only compounds Category 1 CSPs, inspector should answer this statement as N/A.***	Yes		4.2.3 Table 5

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
16.0	Are there controls in place to minimize the influx of contaminants from materials (supplies and equipment) and personnel as they move from areas of lower quality to those of higher quality in compliance with USP <797> standards? ***Inspector note: An example of material movement from lower quality air to higher quality air includes movement from a non-classified area to an ISO Class 8 anteroom, ISO Class 8 anteroom to an ISO Class 7 buffer room, or from an ISO Class 7 buffer room to an ISO Class 5 PEC.*** *If no, go to compliance statements.*	Yes		4.5
16.1	Before any item is introduced into the SEC, placed into the pass-through chamber, or brought into the SCA (providing that packaging integrity will not be compromised), it is wiped with a sporicidal disinfectant, EPA-registered disinfectant, or sterile 70% isopropyl alcohol (IPA) using low-lint wipers by personnel wearing gloves.	Yes		4.5
16.2	Before any item is introduced into the PEC, it is wiped with sterile 70% IPA using sterile low-lint wipers and allowed to dry before use.	Yes		4.5
17.0	Does the pharmacy have the appropriate facility design and controls (including the fixtures, types of equipment, materials, and supplies that are stored) in the classified areas in compliance with USP <797> standards? *If no, go to compliance statements.*	Yes		4, 9.1, 19.1

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
17.1	The sink used for hand hygiene, located outside of the anteroom, is placed in an appropriate area and clean space to minimize the risk of bringing contaminants into the anteroom. ***Inspector note: Inspector should evaluate the sink location in relation to the activities that occur where the sink is located as well as the distance between the sink and the entrance to the compounding suite/SCA. Examples that may not be considered appropriate include but are not limited to: sink is located in the bathroom, an adjacent suite or property, or in an employee breakroom where food is prepared.*** ***If the sink is located in the anteroom, inspector should answer statement as N/A.***	N/A		4.4
17.2	The sink used for hand hygiene, located inside of the anteroom, is placed in an appropriate area to minimize the risk of bringing contaminants into the buffer room. ***Inspector note: Inspector should evaluate the sink location in relation to the doors and compounding activities. For example, the sink is where compounders perform hand hygiene close to where garb is stored (where it can easily get wet/splashed).*** ***If the sink is located outside the anteroom, inspector should answer statement as N/A.***	Yes		4.4
17.3	The doors into the anteroom from the general pharmacy area and from the anteroom into the clean/buffer room are prevented from both being open at the same time (eg, by interlocking, training of personnel, or signage).	Yes		4.2.1
17.4	The inside and outside doors of a pass-through are prevented from both being open at the same time (eg, by interlocking, training of personnel, or signage).	Yes		4.2.1

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
24.0	Is differential positive pressure maintained in compliance with USP <797> standards? ***Inspector note: Per USP <797>, no pressure differential is required between the SCA and the surrounding area.*** *If no, go to compliance statements.* *Inspector should view logs and current status (while observing compounding) to verify.* *If the pharmacy uses an SCA for sterile compounding environment, inspector should answer statement as N/A.*	Yes		4.2.1, 4.2.5, 5
24.1	The facility design creates room separation to allow positive pressure differentials between spaces (rooms) for movement of air from higher quality air to lower quality air. ***Inspector should review a graphic of the airflow contained in the certification report.***	Yes		4.2.1, 4.2.5, 5
24.2	The facility has a system in place to continuously monitor pressure differentials (eg, magnehelic gauge). ***Per USP, pressure differentials need to be monitored continuously, but personnel are not specifically required to visually monitor pressure during compounding activities.***	Yes		4.2.1, 4.2.5, 5
24.3	The facility has a record system to record pressure differentials on days when compounding occurs. ***Inspector note: Per USP, the quantitative results from the pressure monitoring device must be reviewed and documented at least daily on the days when compounding is occurs.***	Yes		4.2.1, 4.2.5, 5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
24.4	The differential positive pressure between unclassified and the first space in the compounding suite is at least 0.020 inch water column. ***Inspector note: Per USP, certifiers should confirm (this is a USP recommendation) positive pressure around doorways, pass-throughs and any opening in the cleanroom suite with smoke testing (to confirm positive pressure is maintained) with initial certification of the cleanroom suite.*** ***If no, record the observed pressure differential between the two identified spaces (eg, ISO Class 8 anteroom and the general pharmacy area).***	Yes		4.2.1, 4.2.5, 5
24.5	The differential positive pressure between adjacent classified areas is at least 0.020 inch water column. ***If no, record the observed pressure differential between the two identified spaces (eg, ISO Class 8 anteroom and the ISO Class 7 buffer room).***	Yes		4.2.1, 4.2.5, 5
24.6	Pressure differential monitoring and quantitative results are reviewed and documented at least daily on days when compounding occurs.	Yes		4.2.1, 4.2.5, 5
25.0	Does the pharmacy have a policy in place to cease compounding when the pharmacy is unable to maintain positive pressure differentials (outside of anticipated variations due to opening and closing of doors)?	Yes		4.2.1, 4.2.5, 5
26.0	Are pressure differential monitoring procedures in place that include an alarm or alert when there is an excursion? ***Inspector note: USP <797> does not require there to be an alarm or an alert.***	No		4.2.5
27.0	Does the facility perform both sterile and nonsterile compounding?	No		4.2.1

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
	Certification and Environmental Monitoring Inspector to review past two (2) Certification reports for the SEC and all PECs.			5
32.0	Does the pharmacy ensure that each area related to CSP preparation is certified to meet the classified air quality standard appropriate for the activities conducted in that area in compliance with USP <797> standards? ***If no, go to compliance statements.*** ***Inspector is to review current certification reports.***	Yes		5
32.1	The most recent PEC and SEC certification reports are available for review.	Yes		4.2, 5, 20
32.2	Certification of all classified areas, including PECs, is performed at least every six months.	Yes		4.2.3, 5
32.3	Certification of all classified areas, including PECs, is performed whenever a device is relocated or a major service to the facility is performed. ***Inspector note: Classified areas must be recertified if there are changes to the area such as redesign, construction, replacement or relocation of any PEC, or alteration in the configuration of the room that could affect airflow or air quality.***	Yes		5
32.4	Certification reports are reviewed by the designated person(s). ***Inspector note: If the designated person(s) review is not documented, describe how it is ensured that the review occurred.***	Yes		4.2, 5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
33.2	The certification report includes the name of the certifier. ***Inspector note: Per USP <797>, a qualified certifier may have received training and education from professional organizations such as the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) and Controlled Environment Testing Association (CETA). Both organizations provide certification (Registered Certification Professional – Sterile Compounding Facilities), education, and resources.***	Yes		5
33.3	The certification report describes the "dynamic conditions" including the number of personnel in the cleanroom suite. ***Inspector note: Compounders can perform mock compounding activities and/or performing media-fill while the certifier is conducting testing. Number of personnel present in the SEC must be documented.***	Yes		5, 20
33.4	**SEC: Airflow testing** is performed and documented on the certification report to determine acceptability of the **air volume and room air exchange rate (ACPH).** ***Inspector note: Per USP <797>, unclassified SCAs have no ACPH requirement.*** ***If pharmacy only compounds in an SCA, inspector should answer statement as N/A.***	Yes		4.2.4, 5 Table 6
33.5	**SEC:** All of the following ACPH required elements were documented on the certification report: the ACPH from HVAC, the ACPH contributed from the PEC, and the total ACPH. ***If pharmacy only compounds in an SCA, inspector should answer statement as N/A.***	Yes		4.2.4, 5

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
33.6	**The ISO Class 8 anteroom** is certified and documented as having a minimum of 20 ACPH with at least 15 ACPH of the total air change rate coming from HVAC through HEPA filters located in the ceiling. ***If the pharmacy has an ISO Class 7 anteroom, inspector should mark as N/A.***	Yes		4.2.4, 5 Table 6
33.7	**The ISO Class 7 buffer room and ISO Class 7 anteroom (if required)** is certified and documented as having a minimum of 30 ACPH with at least 15 ACPH of the total air change rate in a room coming from the HVAC through HEPA filters located in the ceiling. ***Inspector note: If the PEC is used to meet the minimum total ACPH requirements, the PEC must not be turned off, except for maintenance.***	No	The certification report does not show the separate room and PEC contributions for total ACPH.	4.2.4, 5 Table 6
33.8	**SEC: Airflow testing** is performed and documented on the certification report to determine acceptability of the **room pressure differential** in doorways between adjacent rooms.	Yes		4.2.5, 5
33.9	**SEC:** The differential pressure measured was at least 0.020 inch water column positive from the cleanroom to the anteroom and between the anteroom and all adjacent spaces with the doors closed. ***Inspector note: No pressure differential is required between the SCA and the surrounding area.***	Yes		4.2.1, 4.2.5, 5
33.10	**SEC:** All SEC HEPA filters were leak tested (to confirm **HEPA filter integrity**).	Yes		5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
33.11	**SEC:** All SEC HEPA filters with leaks were repaired. ***If leaks were not repaired, describe what actions pharmacy took (eg, pharmacy implemented mitigation strategies such as reduced BUD or used alternative pharmacy location).*** ***If no repairs were needed, inspector should answer statement as N/A.***	N/A		5
33.12	**PEC: (Dynamic airflow) Smoke pattern tests** are performed for each PEC during dynamic operating conditions to demonstrate unidirectional airflow and sweeping action over and away from the CSPs. ***Inspector note: Per USP, "HEPA-filtered air must be supplied by the PEC at a velocity sufficient to sweep particles away from critical sites and maintain unidirectional airflow during operations. Proper design, control, and use minimizes turbulence and creation of eddies or stagnant air in the PEC." Describe if smoke pattern testing of PEC was documented thoroughly in the report or through video.***	Yes	Airflow visualization studies using smoke were performed within the laminar flow hoods using visible smoke. The studies were recorded and noted to be under 'operational conditions'.	4.2.2, 4.2.3, 5
33.13	**PEC: Dynamic airflow smoke pattern** confirms equipment and supplies necessary for performing compounding activities in the PEC do not disrupt unidirectional airflow. ***Inspector note: Per USP, "Proper placement of equipment in a PEC must be initially verified by a dynamic airflow smoke pattern test to demonstrate minimal disruption in airflow. The dynamic airflow smoke pattern test must be repeated if equipment is placed in a different location."***	Yes		4.2.2, 4.2.3, 4.5, 5, 9.1

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
33.14	**PEC: Total (nonviable) particle count** testing was performed under dynamic operating conditions using calibrated electronic equipment. ***Inspector note: Per USP, "Measurements of total airborne particles must be taken in each PEC at locations where there is greatest risk to the exposed CSPs, containers, and closures...Measurements of total airborne particles in other classified areas, including the buffer room(s) and anteroom(s), should be taken at representative locations that reflect the quality of air in the room(s)."***	Yes		5, 5.1
33.15	**PEC:** All PEC HEPA filters were leak tested (to confirm **HEPA filter integrity**). ***Inspector note: The certification report for each PEC should show air velocities within the PEC.***	Yes		5
33.16	**PEC:** All PEC HEPA filters with leaks identified were repaired. ***If leaks were not repaired, describe what actions pharmacy took (example: PEC taken out of service until HEPA filter could be replaced).*** ***If no repairs were needed, inspector should answer statement as N/A.***	Yes	On the March 5, 2025 certification report conducted by Cleanroom Consulting Services, ISO 5 laminar flow hood serial number HLF000536 HEPA filter was patched and rechallenged with passing results.	5

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
33.17	**PEC-IVLFZ**: Pharmacy's integrated vertical laminar flow zone (IVLFZ) meets design, functional requirements, and certification requirements under USP <797>. ***Inspector note: Per USP <797>, "Strategic location of air returns in addition to full coverage of HEPA-filters above the work surface is required. Both static and dynamic smoke studies of air returns in addition to full coverage of HEPA-filtered air void of turbulence, dead air zones, and refluxing from the HEPA filters to and across the entire work area and to the air returns must be documented (eg, with video)."*** ***If pharmacy does not use an IVLFZ, inspector should answer statement as N/A.***	N/A		4.2.3
33.18	If a **robotic enclosure is used as the PEC**, or placed within the PEC, a dynamic airflow smoke pattern test must be performed initially and at least every 6 months thereafter to ensure that: 1) it is properly integrated into the facility, 2) there is no turbulence or refluxing at any critical site(s), 3) room air does not enter the PEC where sterile products and/or preparations may be exposed, and 4) all processes can be performed without introducing contamination to the direct compounding area(s). ***If pharmacy does not use a robotic enclosure, inspector should answer statement as N/A.***	N/A		4.2.3

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
34.0	Was smoke testing performed in SEC to confirm all particle generating equipment (eg, computers, printers, refrigerators, PECs) do not disrupt airflow? ***Inspector note: This question will be N/A unless the pharmacy is new, has recently completed construction, or equipment has been moved within SEC since last certification.***	N/A		5
35.0	Does the pharmacy have an established environmental monitoring (eg, microbiological air and surface monitoring) program in compliance with USP <797> standards? ***Inspector note: Per USP, "The goals of a microbiological air and surface monitoring program are to determine whether contamination is present at unacceptable levels and to assess whether proper personnel practices are being followed, cleaning and disinfecting agents are effective, and environmental quality is maintained."*** *If no, go to compliance statements.*	Yes		6, 6.1, 6.2
35.1	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed initially in the selected sampling sites to establish a baseline level of environmental quality for each classified area, ie, each ISO Class 5 PEC, each ISO Class 7, and ISO Class 8 room.	Yes		6, 6.1, 6.2
35.2	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed in conjunction with the certification of new facilities and equipment.	Yes		6, 6.1, 6.2

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
35.7	The pharmacy ensures that viable air and surface sampling is performed by a trained and competent individual who is familiar with the methods and procedures for air sampling and surface testing. ***If sampling is conducted by internal personnel, inspector should verify that documented training and competencies are located in the employee file.***	Yes		6, 6.1, 6.2
35.8	Environmental monitoring program (eg, viable air and/or surface monitoring) describes/identifies corrective actions to minimize the risk of CSP contamination and that these corrective actions are documented.	Yes		6, 20
36.0	Is surface sampling performed at the end of a compounding activity or shift but before the area has been cleaned and disinfected (to obtain a sample that is representative of the typical compounding conditions at the pharmacy)? ***Inspector note: this is a USP recommendation.***	Yes		6.1, 6.3
37.0	Does the pharmacy send out all air quality for viable airborne samples to an external lab (third party) for incubation and processing? ***If pharmacy exclusively does internal incubation and results processing, inspector should answer statement as N/A.***	Yes	The third party certification company sends their samples to the third party external lab Focus Laboratories of Allentown, PA. All samples collected by the pharmacy are internally incubated to USP standards.	6.2.2

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
38.0	Does the pharmacy send out all surfaces for viable particle samples to an external lab (third party) for incubation and processing? ***If pharmacy exclusively does internal incubation and results processing, inspector should answer statement as N/A.***	N/A	The third party certification company sends their samples to the third party external lab Focus Laboratories of Allentown, PA. All samples collected by the pharmacy are internally incubated to USP standards.	6.3
39.0	For any samples that are sent to an external lab (third party), does the pharmacy receive a report from the third party confirming incubation parameters meet USP <797> requirements (eg, the correct temperature and the correct length of incubation time are documented in the report)? ***Inspector note: Incubation parameters are the same as seen in statements 40.6-40.7 and 41.4-41.5.*** ***This question applies for any air or surface sample sent to an external lab. If no, describe observations.***	Yes	The third party certification company sends their samples to the third party external lab Focus Laboratories of Allentown, PA. All samples collected by the pharmacy are internally incubated to USP standards.	6.2.2
40.0	Are processes for sampling and monitoring **air quality for viable airborne** particles in compliance with USP <797> standards? ***Inspector note: Per USP <797>, facilities performing any Category 3 compounding must adhere to the increased environmental monitoring requirements for all classified areas where Category 3 CSPs are compounded and increased environmental monitoring requirements apply at all times regardless of whether Category 3 CSPs are being compounded on a given day.*** ***Review six months of air sampling data to verify. If no, go to compliance statements.***	Yes		6.2, 6.2.1, 6.2.2, 6.2.3, 14.4.2 Box 5, Table 7

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
40.5	The pharmacy uses an appropriate microbiological growth media for sampling. ***Inspector note: An appropriate microbiological growth media means a media that supports the growth of bacteria and fungi (eg, TSA), accompanied by a COA that verifies that the media meets expected growth promotion, pH, and sterilization requirements.***	Yes		6.2.2 Box 5
40.6	The pharmacy incubates all air samples for time and temperature in compliance with USP <797> following the one media device method. ***Inspector notes: Per USP <797> (Box 5), when using the one media device method, sampling media is to be covered, inverted, and incubated at 30°C–35°C for no less than 48 hours. Then, after examination and recording of results, further incubated at 20°C–25°C for no less than five additional days.*** ***If the pharmacy does not utilize this method or sends offsite, inspector should answer statement as N/A.***	N/A		6.2.2 Box 5
40.7	The pharmacy incubates all air samples for time and temperature in compliance with USP <797> following the alternative two media device method. ***Inspector note: Per USP <797> (Box 5), two samples may be collected for each sample location and incubated concurrently to shorten the overall incubation period. Both samples are TSA, or one sample is TSA and the other fungal media (eg, malt extract agar [MEA] or sabouraud dextrose agar [SDA]). Each sample is incubated in a separate incubator, one sample at 30°C-35°C for no less than 48 hours the other sample at 20°C-25°C for no less than five days. If fungal media is used, incubate at 20°C-25°C for no less than five days.*** ***If the pharmacy does not utilize this method or sends offsite, inspector should answer statement as N/A.***	N/A		6.2.2 Box 6

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
	Components FDA defines manufacturer... as used in section 510 of the Federal Food, Drug, and Cosmetic Act, includes the activities of relabelers, repackers, and salvagers. When not modified by "domestic" or "foreign," the term includes both domestic manufacturers and foreign manufacturers.			9
49.0	Does the pharmacy compound CSPs using active pharmaceutical ingredients (APIs) and non-API components? ***Inspector note: Per USP <797>, non-API components may include pharmaceutical excipients, sterile containers, and container closure systems. If the pharmacy does not compound using API or non-API components, inspector should answer this question as N/A.***	N/A		9.3
50.0	Is the pharmacy's selection of active API and non-API components in compliance with USP <797> standards? ***Verify by selecting products from the shelf of different suppliers and ask to see the COAs for those products. If no, go to compliance statements. If the pharmacy does not compound using API or non-API components, inspector should answer this question as N/A.***	N/A		9.3
50.1	**APIs**: APIs used are compliant with the criteria in the USP–NF monograph, if one exists. ***If pharmacy does not compound CSPs that have a USP monograph, inspector should answer this statement as N/A.***	N/A		9.3.1

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
51.2	Upon receipt of each lot of a component, personnel verify the labeling and condition of each component and examine the external packaging for evidence of deterioration and other aspects of unacceptable quality (eg, outer packaging is damaged, temperature-sensing indicators show that the component has been exposed to excessive temperatures).	N/A		9.3.2, 9.3.3
51.3	Each lot of commercially available sterile, depyrogenated containers and container-closure systems are accompanied by a COA or other documentation showing conformance with established specifications for sterility and depyrogenation requirements.	N/A		9.3.1, 9.3.2, 9.3.3
51.4	The date of receipt by the pharmacy is clearly marked on each API or component package that lacks a vendor expiration date and are assigned and labeled with an expiration date not to exceed one year after receipt by the pharmacy.	N/A		9.3.2, 9.3.3
51.5	All components are reinspected before use. ***Inspector note: Per USP <797>, all packages must be inspected to detect container breaks, looseness of the cap or closure, and deviation from the expected appearance, aroma, and/or texture of the contents that might have occurred during storage. Sterile container closures are visually reinspected to ensure that they are free from defects that could compromise sterility and that they are otherwise suitable for their intended use.***	N/A		9.3.2, 9.3.3

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
52.4	When nonsterile ingredients, products, components, or devices (eg, non-sterile APIs and nonsterile vials and closures) are used for compounding, the pharmacy has the appropriate equipment to sterilize the finished product. Per USP, "Injectable compounded preparations that contain nonsterile components or that come into contact with nonsterile devices (eg, containers, tubing) during any phase of the compounding procedure must be sterilized within 6 hours after completing the preparation to minimize the generation of bacterial endotoxins in CSPs." ***If the pharmacy does not perform compounding that requires sterilization, inspector should answer statement as N/A.***	N/A		9.1, 9.3.1, 10
53.0	Does the pharmacy operate and maintain records for all equipment used for compounding in accordance with manufacturer specifications and USP <797> standards? ***If no, go to compliance statements.***	Yes		9.1, 20
53.1	Automated, mechanical, or electronic equipment (monitoring equipment, autoclaves, ovens, etc) are periodically inspected and calibrated yearly or in accordance with the equipment manufacturer guidelines.	Yes		9.1, 9.3.4
53.2	Automated compounding devices (ACDs) and other similar equipment (single channel or multi-channel) are assessed for accuracy and calibrated daily, prior to initial use, and a daily record is maintained. ***Inspector note: Per USP, "The precision of the equipment can be monitored based on an assessment of day-to-day variations in its accuracy measures. Compounding personnel must maintain a daily record of the accuracy measurements on the days the equipment is in use. Corrective actions must be implemented if accuracy measurements are outside the manufacturer's specification."***	Yes		9.1

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
56.2	Compounding personnel entering the cleanroom suite and/or SCA adhere to the minimum garbing requirements in USP <797>. ***Inspector note: Per USP <797>, additional garbing requirements must be continuously met in the buffer room where Category 3 CSPs are prepared, regardless of whether Category 3 CSPs are compounded on a given day.***	Yes		3.3
56.3	Donning procedures are performed in an order that reduces the risk of contamination. ***Inspector note: USP recommends (not requires) the donning procedure to be performed in the anteroom.*** ***If no, inspector must describe in the notes column why a risk of contamination is a concern.***	Yes		3.3
56.4	Doffing procedures are performed in an order that reduces the risk of contamination.	Yes		3.3
56.5	The order of garbing was performed in the appropriate sequence in relation to the placement of the sink. ***Inspector note: If hand hygiene is completed outside of a classified area, alcohol-based hand rub must be used prior to donning garb.***	Yes		3.2, 3.3
56.6	Sterile gloves are donned in a classified room or SCA. ***Inspector note: If hand hygiene is completed outside of a classified area, alcohol-based hand rub must be used prior to donning garb and again before sterile gloves are donned, see USP <797> FAQ #97.***	Yes		3.2

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
56.7	Skin is not exposed inside the ISO Class 5 PEC.	Yes		3.3
56.8	Garb is replaced immediately if it becomes visibly soiled or if its integrity is compromised.	Yes		3.3
56.9	**Category 1 and Category 2 only:** Upon exit of the compounding area, all garb (except for gowns) is discarded or laundered prior to reuse. ***Inspector note: Gowns (disposable and non-disposable) may be reused within the same shift by the same person only if stored appropriately.*** ***If the facility prepares any Category 3 CSPs, additional garbing requirements must be followed and gowns must not be reused, inspector should answer statement as N/A.***	Yes		3.3
56.10	**Category 1 and Category 2 only:** Gowns reused within the same shift and by the same person are maintained in a manner that prevents contamination. ***Inspector note: Per USP <797>, gowns stored for reuse must be maintained in a classified area or adjacent to or within the SCA in a manner that prevents contamination (eg, away from sinks to avoid splashing).*** ***If the facility prepares any Category 3 CSPs, additional garbing requirements must be followed and gowns must not be reused; inspector should answer statement as N/A.***	N/A	Gowns are not allowed to be reused.	3.3
57.0	List the name(s) of the CSPs observed by the inspector as part of live compounding demonstration.		Magnesium Sulfate 2 grams in sodium chloride 0.9% 500mL IVPB #8; and Ceftriaxone 2 g/20mL syringe SWFI #15

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
58.0	**Compounding Observation:** Are compounding personnel observed using the appropriate aseptic technique that ensures the quality of the CSP and the environment is maintained in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		1, 2.1, 2.3
58.1	All sterile compounding is performed in a PEC with ISO Class 5 conditions or better. ***If the pharmacy only performs immediate use compounding, inspector should answer this statement as N/A.***	Yes		4.1.2
58.2	**Category 2 and Category 3 only:** All PECs are placed in a cleanroom suite. ***Inspector note: Per USP, "If compounding only Category 1 CSPs, the PEC may be placed in an unclassified SCA." If the pharmacy only prepares Category 1 CSPs, inspector should answer this statement as N/A.***	Yes		4.1.2
58.3	Compounding personnel ascertain before use that components are of the correct identity, appropriate quality, within the expiration date, and have been stored under the proper conditions.	Yes		9.3.3

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
58.4	All items are wiped with a sporicidal disinfectant, EPA-registered disinfectant, or sterile 70% IPA prior to being introduced into the clean side of the anteroom, placed into a pass-through chamber, and/or brought into the SCA. ***Inspector note: The wiping procedure or agents used should not compromise the packaging integrity or render the product label unreadable. Disinfectant dwell time minimums, as specified by the manufacturer, are to be followed.***	Yes		8.1
58.5	Before any item is introduced into the PEC, it is wiped with sterile 70% IPA using sterile low-lint wipers and allowed to dry before use. ***Inspector note: Per USP, "When sterile items are received in sealed containers designed to keep them sterile until opening, the sterile items may be removed from the covering as the supplies are introduced into the ISO Class 5 PEC without the need to wipe the individual sterile supply items with sterile 70% IPA. The wiping procedure must not render the product label unreadable."***	Yes		8.2
58.6	Aseptic processes and manipulations are performed in a manner intended to minimize the risk of contamination. ***Inspector note: Observe the compounder's technique to ensure proper aseptic technique is utilized such as: preparation occurs in the direct compounding area (DCA); the compounder does not interrupt first air during the compounding process; proper set up of equipment, supplies, and components that ensure first air is not interrupted; the compounder handles the syringe in a manner that does not introduce contaminates (touch contamination on the plunger rod); proper entry and exit of materials in ISO Class 5 PEC; and frequent sanitization of gloves.***	Yes		2.3

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
58.7	All critical sites (eg, vial stoppers, ampule necks, and IV bag septums) are wiped with sterile 70% IPA in the PEC and allowed to dry before puncturing.	Yes		7, 8.3
58.8	Gloves are disinfected with sterile 70% IPA immediately before compounding and regularly throughout the compounding process. ***Inspector note: Per USP, best practice is to re-sanitize each time hands re-enter the PEC. This may not occur when compounder is staging the next batch.***	Yes		3.3
58.9	Gloves are regularly inspected for holes, punctures, or tears, and are replaced immediately if such defects are detected.	Yes		3.3
59.0	Do compounding personnel adhere to the USP established time limits for components after initial puncture or entry in compliance with USP <797> standards? ***Look at punctured, stored containers and confirm if puncture time or BUD is noted on the container and stored within time limits. If no, go to the compliance statements.***	Yes		15

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
59.1	Single dose containers (entered or punctured only in an ISO Class 5 air or cleaner air) are not used beyond 12 hours after initial puncture or entry or assigned BUD, whichever is shorter. ***Inspector note: This applies to conventionally manufactured single-dose vials, compounded single-dose CSPs used as components, and CSP stock solutions. The labeled storage requirements during that 12-hour period must be maintained. Additionally, per USP, "This time limit for entering or puncturing (a single-dose CSP or CSP stock solution) is not intended to restrict the BUD of the final CSP."***	Yes		15.1, 16.2
59.2	Multiple-use containers are not used for more than 28 days after initial puncture or entry, manufacturer specifications, or assigned BUD, whichever is shorter. ***Inspector note: This applies to conventionally manufactured multiple-dose vials and compounded multiple-dose CSPs used as components. Multiple-dose CSPs are required to meet the criteria for antimicrobial effectiveness testing (USP <51>) and must be stored under the conditions upon which its BUD is based (eg, refrigerator or controlled room temperature).***	Yes		14.5, 15.2, 16.1
59.3	The remaining contents of opened single-dose ampules (or vials where container closure system has been removed) are discarded immediately. ***Inspector note: Ampules or vials where the container closure system has been removed must not be stored for any time period.***	Yes		15.1

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
59.4	Pharmacy bulk package containers of sterile drugs for parenteral use are only entered or punctured in an ISO Class 5 PEC. ***Inspector note: Per USP, the pharmacy bulk package system must be used according to the manufacturer's labeling.***	Yes		15.3
60.0	**Inspect several different finished compounded sterile preparations.** Are all the finished compounded sterile preparations free from any evidence of particulates, filaments, floaters, or signs of contamination? ***Inspector note: If found, request the compounded preparation to be quarantined and notify NABP immediately. Additionally, list the name(s) of the compounded preparation(s) observed; description of type of contamination suspected (eg, filament or floater); number of preparations affected (eg, two of the five vials on the shelf); lot or batch information; BUD assigned; and collect photographs, copy of MFR, and CR.***	Yes		12
61.0	Are there procedures for in-process checks performed by a pharmacist? ***Inspector note: In-process checks are safety steps for complex, multi-step compounding processes or high risk drugs or high risk populations (eg, neonates).*** ***These checks indicate that appropriate procedures and packaging are followed for each step, including addressing pharmacist verification of steps performed by non-pharmacists and visual inspection of product.*** ***Documentation of the compounding accuracy is recommended to be performed by someone other than the compounder to ensure proper measurement, reconstitution, and component usage. Some checks may be done retrospectively and with the assistance of technology.***	Yes		2 Table 2, Table 3

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
62.0	**Cleaning and Disinfection Observation:** Does the pharmacy perform cleaning and disinfection activities in compliance with USP <797> standards? ***If inspector is unable to observe cleaning activities (due to timing of compounding activities observed), inspector should interview compounder(s) to have them walk through their normal process. If this occurs, inspector should record in notes column "process only."*** ***If no, go to compliance statements.***	Yes		7
62.1	All cleaning and disinfection activities are performed by appropriately garbed personnel.	Yes		7
62.2	Cleaning and disinfection are performed on all surfaces in the classified area and SCA.	Yes		7
62.3	Cleaning is performed in the direction of clean to dirty areas.	Yes		7
62.4	Reusable cleaning tools are disinfected prior to and after each use.	Yes		7.1.2
62.5	Only sterile cleaning, disinfecting, and sporicidal agents are permitted for use in the PEC. ***Inspector note: If pharmacy utilizes non-ready to use (RTU) agents, they must be diluted with sterile water. Per USP, "Once opened, sterile cleaning and disinfecting agents and supplies (eg, closed containers of sterile wipers) and sterile 70% IPA may be reused for a time period specified as by the manufacturer and/or described in the facility written SOPs."***	Yes		7.1.1, 7.1.2

		Observation	Inspector Notes	USP Reference(s)
62.6	Only sterile supplies and equipment are permitted for use in the PEC. ***Inspector notes: Non-disposable cleaning tools or handles must be properly disinfected prior to entering the PEC and prior to use.***	Yes		7.1.1, 7.1.2
62.7	Compounding personnel are using the appropriate sterile cleaning, disinfecting, and sporicidal agents within the PEC.	Yes		7.1.1
62.8	Compounding personnel are using the appropriate cleaning and disinfecting procedures and techniques within the PEC. ***Inspector note: Per USP, "All cleaning, disinfecting, and application of sporicidal disinfectants must be documented according to the facility's SOPs"; "Cleaning must be performed in the direction of clean to dirty areas"; and when 70% sterile IPA is used, it is used last and allowed to dry. There are differing opinions on the best order of cleaning. Procedure includes using a sterile low-lint wiper to all surfaces. Allow surfaces to dry completely before beginning compounding.***	Yes		7.1.2 Box 7, Box 8
62.9	The manufacturer's directions or published data for the minimum contact time is followed for each of the cleaning, disinfecting, and sporicidal disinfectant used. ***Per USP, contact times should be included in the SOP based on the agent used.***	Yes		7.1.1 Box 7, Box 8

e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
67.1	The pharmacy has the appropriate dry heat sterilization equipment. ***Inspector note: Dry heat sterilization is usually performed in an oven designed for sterilization at 160°C or higher. The dry heat oven should be able to get to the appropriate temperature and pressure, for example, not be a toaster oven.***	N/A		10.4
67.2	Solutions are passed through a 1.2 micron or smaller filter into the final containers to remove particulates before sterilization.	N/A		10.4
67.3	During sterilization, sufficient space is left between materials to allow for circulation of hot air.	N/A		10.4
67.4	CSPs and other items are exposed to dry heat for the length of time necessary for all items to reach sterilizing temperature of 160°C or higher. ***Inspector note: Per USP <797>, if lower temperatures are used, they are validated by biological indicators (see USP <1229.8>, Validation of Dry Heat Sterilization, Biological Indicators). The calibrated oven must be equipped with temperature controls and a timer.***	N/A		10.4

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
67.5	The appropriate biological indicators are used to verify the effectiveness each sterilization run or load and documented in the compounding record. ***Inspector note: Per USP <797>, "The effectiveness of dry heat sterilization must be verified and documented with each sterilization run or load by using appropriate biological indicators, such as spores of Bacillus atrophaeus (ATCC 9372; see Biological Indicators for Sterilization USP <1229.5>) and other confirmation methods (e.g., temperature-sensing devices). The date, run, and load numbers of the dry heat oven used to sterilize a CSP must be documented in the CR."***	N/A		10.4 USP <1229.5>
67.6	A calibrated data recorder or chart is used to monitor each cycle and the data is reviewed to identify cycle irregularities (eg, deviations in temperature or exposure time) and results documented on the CR.	N/A		10.4, 20
68.0	**Dry Heat Depyrogenation:** Is the appropriate depyrogenation method used and documented in compliance with USP <797> standards? ***View documentation records of items depyrogenated to confirm.*** ***If the pharmacy does not use this method, inspector should answer question as N/A.***	N/A		10.1 USP <1228.1>
68.1	Glassware, metal, and other thermostable containers are exposed to dry heat for the length of time necessary for all items to be rendered pyrogen free.	N/A		10.1

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
68.2	The effectiveness of the dry heat depyrogenation cycle is established and documented. ***Inspector note: Per USP <797>, this must be done initially, re-established any time there are changes made to the cycle (eg, load conditions, duration, temperature), and verified at least annually by using endotoxin challenge vials (ECVs) to demonstrate that the cycle is capable of achieving a ≥ 3-log reduction in endotoxins (see Bacterial Endotoxins Test USP <85>). The verification must be documented.***	N/A		10.1 USP <1228.1> USP <85>
68.3	Items that are not thermostable are depyrogenated by multiple rinses with sterile, nonpyrogenic water (eg, sterile water for injection or sterile water for irrigation) and then thoroughly drained or dried immediately before use in compounding. ***Inspector note: USP <1228.4> Depyrogenation by Rinsing also applies.***	N/A		10.1 USP <1228.4>
	Master Formulation and Compounding Records **Inspector should review a minimum of five (5) master formulation records and five (5) compounding records.**			**11**
69.0	Are **Master Formulation Records (MFRs)** created and maintained in compliance with USP <797> standards? ***If no, go to the compliance statements.***	No		11.1
69.1	The pharmacy creates and maintains MFRs for CSPs that are prepared for more than one patient.	Yes		11.1, 20
69.2	MFR changes and alterations are approved and documented according to the pharmacy's SOPs.	Yes		11.1

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
69.3	The pharmacy creates and maintains MFRs for CSPs that are prepared from nonsterile ingredients.	Yes		11.1, 20
69.4	The MFR includes the name, strength or activity, and dosage form of the sterile compounded preparation.	Yes		11.1, 20
69.5	The MFR includes the identities and amounts of all ingredients.	Yes		11.1, 20
69.6	The MFR includes the type and size of container closure.	Yes		11.1, 20
69.7	The MFR includes complete instructions for preparing the sterile compounded preparation, including equipment, supplies, a description of the compounding steps, and any special precautions.	Yes		11.1, 20
69.8	The MFR includes a physical description of the final CSP.	No	The integrated MFR to CR does not have a physical description for the compounding personnel to review.	11.1, 20
69.9	The MFR includes the BUD and storage requirements.	Yes		11.1, 14.2, 20
69.10	The MFR includes the reference source to support the stability of the CSP.	No	References for BUDs on MFRs were inconsistently documented.	11.1, 20
69.11	The MFR includes quality control procedures (eg, pH testing, filter integrity testing).	Yes		11.1, 20

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
73.7	**Category 2 CSPs:** BUDs for **terminally sterilized Category 2 CSPs** where **sterility testing and endotoxin testing (if applicable) are performed** and passed do not exceed the limits established in Table 13. ***Inspector note: Per USP <797> Table 13, BUD maximum limits for terminally sterilized to PNSU of 10^{-6} (eg, dry heat, steam, irradiation) Category 2 CSPs are defined as: 45 days CRT; 60 days refrigerator; and 90 days freezer. Endotoxin testing is required for Category 2 injectable CSPs compounded from one or more nonsterile component(s) and assigned a BUD that requires sterility testing. USP <797> recommends that all injectable Category 2 CSPs made from one or more nonsterile components are also endotoxin tested.*** ***If no terminally sterilized Category 2 CSPs are prepared, inspector should answer statement as N/A.***	N/A		14.3, 14.2.1, 14.2.3, Table 13
74.0	Does the pharmacy ensure the assigned BUD does not exceed the shortest beyond use date of any individual compounded components? ***Inspector note: Per USP, "the BUD should generally not exceed the shortest BUD of any of the individual compounded components. However, there may be acceptable instances when the BUD of the final CSP exceeds the BUD assigned to compounded components (eg, pH-altering solutions). If the assigned BUD of the final CSP exceeds the BUD of the compounded components, the physical, chemical, and microbiological quality of the final CSP must not be negatively impacted." Other examples where this may occur: formula within a formula, preservative-free compounded component used in a preserved final CSP, "in-use" times for pharmacy bulk packages, and cyclosporine ophthalmic stock solution.*** ***If no, inspector should describe the observations, including the name of the component whose BUD was shorter than the assigned BUD of the final CSP.***	Yes		14.3

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: Infucare RX LLC dba Infucare RX

e-Profile ID: 1309782

Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
76.2	When preservatives are used, they are appropriate for the CSP formulation and the route of administration. Inspector note: Per USP <797>, "The preservative must not be inactivated by any ingredients in the CSP, and some preservatives are not always appropriate for the patient (eg, neonates) or route of administration (eg, intrathecal or ophthalmic injection)."	N/A		14.5
76.3	Aqueous multiple-dose CSPs pass antimicrobial effectiveness testing in accordance with USP <51>. ***Inspector note: Per USP <797>, a test can be one test done for each formulation in the particular container-closure system in which it will be packaged, or test results provided by an FDA-registered facility or in appropriate peer-reviewed literature,, provided the sterile compounded preparation formulation and container-closure system used are exactly the same as those tested, unless a bracketing study is performed. The concentration of all other ingredients (including preservatives) must be the same throughout the bracketing study.*** ***Additionally, multiple-dose, nonpreserved, aqueous topical, and topical ophthalmic CSPs prepared as a Category 2 or Category 3 CSP are not required to pass antimicrobial effectiveness testing if the preparation is: For use by a single patient, labeled (in the label or labeling) to indicate that, once opened, it must be discarded after 24 hours when stored at controlled room temperature and/or that, once opened, it must be discarded after 72 hours when stored under refrigeration.***	N/A		14.5 USP <51>

Facility Name: Infucare RX LLC dba Infucare RX
e-Profile ID: 1309782
Inspection Date: 09/15/2025 & 09/16/2025

		Observation	Inspector Notes	USP Reference(s)
78.3	Pharmacy is utilizing an alternative method for sterility assurance testing (other than USP <71>). ***Inspector note: Per USP, "If an alternative method is used for sterility testing, the method must be validated (see USP <1223>) and demonstrated to be suitable for that CSP formulation."*** ***If an alternative method is used, describe the method used and how the pharmacy ensures they are compliant with state-specific regulations.***	N/A		12.2 USP <71>, <1223>
78.4	When sterility testing identifies a failure, the pharmacy has processes to investigate and identify any contributing factors. ***Inspector note: Per USP, "Sterility tests resulting in failures must prompt an investigation into the possible causes and must include identification of the microorganism, as well as an evaluation of the sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. The source(s) of the contamination, if identified, must be corrected, and the facility must determine whether the conditions causing the sterility failure affect other CSPs. The investigation and resulting corrective actions must be documented."*** ***Additionally, some rapid sterility test methods do not allow for the identification of the recovered microorganisms. If one of these methods is used, the pharmacy is not in compliance with the chapter, as the investigation must include identification of the recovered microorganism.***	N/A		12.2

Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.
- Recommend also pulling supervising personnel file.
- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).
Review five (5) personnel files and document your observations. (For applicants seeking a Class E-S Non-Resident Sterile Compounding Inspection (Texas Sampling), review a total of 10 personnel records.)
- *Note: long-term employees may not have initial training available. If this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.
Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed:
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.

Demonstrating Knowledge and Competency of Core Skills (Section 2.1)

USP requirements:
1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2).
2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas:
-Hand hygiene
-Garbing
-Cleaning and disinfection
-Calculations, measuring, and mixing
-Aseptic technique
-Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components)
-Use of equipment
-Documentation of the compounding process (eg, master formulation and compounding records)
-Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area
-Proper use of PECs
-Principles of movement of materials and personnel within the compounding area
3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3).
4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3).
5. All training and evaluations must be documented.

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed.
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.

Hand Hygiene and Garbing Competency Evaluation (Section 2.2)

USP requirements:
1. The garbing and hand hygiene competency evaluation consists of a visual observation and gloved fingertip and thumb sampling (GFT) of both hands.
2. The initial competency evaluation consists of three (3) separate and complete hand hygiene observation, followed by a full garbing procedure and a GFT after garbing. The initial three (3) successful completions must be in succession—failure of any of the three (3) initial garbing competency evaluations requires repeat testing until personnel successfully complete three (3) evaluations in a row.
3. The pharmacy uses a microbiological growth media device (eg, plates, paddles, or slides) containing general microbial growth agar (eg, trypticase soy agar [TSA]) supplemented with neutralizing additives (eg, lecithin and polysorbate 80) that supports both bacterial and fungal growth.
4. The media device is incubated at 30°C-35°C for no less than 48h and then at 20°C-25°C for no less than an additional five days.
5. Failure is indicated by visual observation of improper hand hygiene and garbing procedures and/or GFT results that exceed the defined action levels. Action level after garbing: >0 cfu/total from both hands.
6. Documentation includes, at minimum:
-Name of the person evaluated
-Evaluation date and time
-Media and components used including manufacturer, expiration date, and lot number
-Starting temperature for each interval of incubation
-Dates of incubation
-Results (the number of cfu per hand must be recorded; microbial identification of the cfu is not required by the chapter for GFT)
-Results of the evaluation and any corrective actions
-Name of the observer and personnel reading and documenting the results

Hand Hygiene and Garbing Visual Observation	*Initial GFT x 3 (Post hand washing and garbing)	Subsequent GFT (Post handwashing and garbing)	Documented Failures and Retraining Needs (If none, please mark as N/A)	Notes

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed.
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.
5. Document in notes if initial aseptic manipulation competencies are present in files (*unless long-term employee).

Aseptic Manipulation Competency (Section 2.3)

USP requirements:
1. Media-fill testing procedures simulate the most difficult compounding procedures encountered by personnel.
2. The pharmacy conducts media-fill testing as described in Box 2.
3. The final containers are incubated at 20°C-25°C and 30°C-35°C for a minimum of seven days at each temperature band.
4. Failure is indicated by visible turbidity or other visual manifestations of growth in the media in one or more container closure unit(s) on or before 14 days.
5. Immediately following the media-fill test, GFT is performed on both hands and inside of an ISO Class 5 PEC. Failure is indicated by visual observation of GFT results that exceed defined action levels. Action level after media-fill testing: >3 cfu/total from both hands.
6. Immediately following the GFT, a surface sample of the direct compounding area inside the PEC is performed in accordance with USP standards for surface sample monitoring and action levels. Action level ISO Class 5: >3 cfu/media device.
7. Failure in the media fill, GFT, or surface sampling constitutes an overall failure of the aseptic manipulation competency.
8. Documentation includes, at minimum:
-Name of the person evaluated
-Evaluation date and time
-Media and components used including manufacturer, expiration date, and lot number
-Starting temperature for each interval of incubation
-Dates of incubation
-Results (for GFT, the number of cfu per hand must be recorded and for surface samples, the number of cfu per sample must be recorded. Note: microbial identification of the cfu is not required for media-fill testing)
-Results of the evaluation and any corrective actions
-Name of the observer and personnel reading and documenting the results

GLOSSARY USP <797>
ACD: Automated compounding device.
ACPH: Air changes per hour.
Active pharmaceutical ingredient (API): Any substance or mixture of substances intended to be used in the compounding of a preparation, thereby becoming the active ingredient in that preparation and furnishing pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease in humans and animals or affecting the structure and function of the body. Also referred to as *Bulk drug substance*. A conventionally manufactured drug product is not an API but is typically manufactured from an API(s).
Added substance: An ingredient that is necessary to compound a preparation but is not intended or expected to cause a pharmacologic response if administered alone in the amount or concentration contained in a single dose of the compounded preparation. The term is used synonymously with the terms *inactive ingredient, excipient, and pharmaceutical ingredient.*
Administration: The direct application of a sterile product or preparation to a single patient by injecting, infusing, or otherwise providing a sterile product or preparation in its final form.
Airlock: A space with interlocked doors, constructed to maintain air pressure control when items move between two adjoining areas (generally with different air cleanliness standards). The intent of an airlock is to prevent ingress of particulate matter and microbial contamination from a lesser-controlled area.
Alcohol-based hand rub: An alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands of health care personnel to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients, excipients, and humectants.
Allergenic extract compounding area (AECA): A designated space, area, or room that is not required to be classified, with a visible perimeter that is suitable for preparation of allergenic extract prescription sets.
Allergenic extract prescription set: Combinations of licensed allergenic extracts that would be mixed and diluted to provide subcutaneous immunotherapy to an individual patient, even though these allergenic extract combinations are not specified in the approved BLAs for the licensed biological products.
Allergenic extract: A biological substance used for the diagnosis and/or treatment of allergic diseases such as allergic rhinitis, allergic sinusitis, allergic conjunctivitis, bee venom allergy, and food allergy.
Anteroom: An ISO Class 8 or cleaner room with fixed walls and doors where personnel hand hygiene, garbing procedures, and other activities that generate high particulate levels may be performed. The anteroom is the transition room between the unclassified area of the facility and the buffer room.
Aseptic processing: A method by which separate, sterile components (eg, drugs, containers, or closures) are brought together under conditions that maintain their sterility. The components can either be purchased as sterile or, when starting with nonsterile components, can be separately sterilized prior to combining (eg, by membrane filtration or by autoclave).

Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Aseptic technique: A set of methods used to keep objects and areas free of microorganisms and thereby minimize infection risk to the patient. It is accomplished through practices that maintain the microbe count at an irreducible minimum.
Assigned trainer: One or more individuals assigned by the designated person(s) to be responsible and accountable for directly providing the training, observation, and/or evaluation of personnel for the preparation of CSPs.
Batch: More than one CSP prepared as described in the MFR in a single, discrete process, and expected to have uniform character and quality, within specified limits.
Beyond-use date (BUD): The date, or the hour and date, after which a CSP must not be used, stored, or transported. The date is determined from the date and time the preparation is compounded.
Biological safety cabinet (BSC), Class II: A ventilated cabinet with an open front and inward and downward unidirectional HEPA-filtered airflow and HEPA-filtered exhaust. A BSC used to prepare a CSP must be capable of providing an ISO Class 5 or better environment for preparation of the CSPs.
Biological safety cabinet (BSC): A ventilated cabinet that may be used for compounding. These cabinets are divided into three general classes (Class I, Class II, and Class III). Class II BSCs are further divided into types (Type A1, Type A2, Type B1, Type B2, and Type C1).
BLA: Biological license application.
Blood components: Any therapeutic constituent of blood separated by physical or mechanical means (eg, white cells, red cells, platelets, plasma, serum). It is not intended to include plasma-derived products (eg, albumin, coagulation factors, immunoglobulins) manufactured under an approved BLA or equivalent.
BMBL: Biosafety in Microbiological and Biomedical Laboratories.
Buffer room: An ISO Class 7 or cleaner room with fixed walls and doors where PEC(s) that generate and maintain an ISO Class 5 environment are physically located. The buffer room may only be accessed through the anteroom or another buffer room.
Bulk drug substance: See the entry for *Active pharmaceutical ingredient*.
Category 1 CSP: A CSP that is assigned a BUD of 12 hours or less at controlled room temperature or 24 hours or less refrigerated that is compounded in accordance with all applicable requirements for Category 1 CSPs in this chapter.
Category 2 CSP: A CSP that may be assigned a BUD of greater than 12 hours at controlled room temperature or greater than 24 hours refrigerated that is compounded in accordance with all applicable requirements for Category 2 CSPs in this chapter.

NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
Category 3 CSP: A CSP that may be assigned a BUD exceeding the limits in *Table 13* for Category 2 CSPs and is compounded in accordance with all applicable requirements for Category 3 CSPs in this chapter.
CDC: Centers for Disease Control and Prevention.
Certificate of analysis (COA): A report from the supplier of a component, container, or closure that accompanies the supplier's material and contains the specifications and results of all analyses and a description of the material.
CFU: Colony-forming units.
Classified area: An area that maintains an air quality classification based on the ISO standards required in this chapter (see also the definition for *ISO class).*
Cleaning agent: An agent, usually containing a surfactant, used for the removal of substances (eg, dirt, debris, microbes, and residual drugs or chemicals) from surfaces.
Cleaning: The process of removing substances (eg, organic and inorganic material) from objects and surfaces, normally accomplished by manually or mechanically using water with detergents or enzymatic products.
Cleanroom suite: A classified area that consists of both an anteroom and buffer room.
Component: Any ingredient used in the compounding of a preparation, including any active ingredient, added substance, or conventionally manufactured product.
Compounded sterile preparation (CSP): A preparation intended to be sterile that is created by combining, admixing, diluting, pooling, reconstituting, repackaging, or otherwise altering a drug product or bulk drug substance.
Compounded stock solution: A sterile mixture of components that is used to compound additional CSPs.
Compounding area: The area where compounding is occurring (ie, a cleanroom suite, inside the perimeter of the SCA, or AECA).
Compounding aseptic containment isolator (CACI): A type of RABS that uses HEPA filtration to provide an ISO Class 5 unidirectional air environment designed for the compounding of sterile HDs.
Compounding aseptic isolator (CAI): A type of RABS that uses HEPA filtration to provide an ISO Class 5 unidirectional air environment designed for compounding of sterile non-HDs.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Compounding record (CR): Documents the compounding of each CSP.
Compounding: The process of combining, admixing, diluting, pooling, reconstituting, repackaging, or otherwise altering a drug product or bulk drug substance to create a sterile preparation.
Container closure system: Packaging components that together contain and protect the dosage form. This includes primary packaging components and secondary packaging components, if the latter are intended to provide additional protection.
Containment glove bag: A single-use disposable glove bag that is capable of containing airborne chemical particles.
Containment ventilated enclosure (CVE): A non-ISO classified full or partial enclosure that uses ventilation principles to capture, contain, and remove airborne contaminants through HEPA filtration and prevent their release into the work environment.
Conventionally manufactured product: A pharmaceutical dosage form, usually the subject of an application approved by the applicable national regulatory agency, that is manufactured under current good manufacturing practice conditions.
Critical site: A location that includes any component or fluid pathway surfaces (eg, vial septa, injection ports, and beakers) or openings (eg, opened ampules and needle hubs) that are exposed and at risk of direct contact with air (eg, ambient room or HEPA filtered), moisture (eg, oral and mucosal secretions), or touch contamination.
Designated person(s): One or more individuals assigned to be responsible and accountable for the performance and operation of the facility and personnel as related to the preparation of CSPs.
Direct compounding area (DCA): A critical area within the ISO Class 5 PEC where critical sites are exposed to unidirectional HEPA-filtered air, also known as first air.
Disinfectant: A chemical or physical agent used on inanimate surfaces and objects to destroy fungi, viruses, and bacteria. Sporicidal disinfectants are considered a special class of disinfectants that also are effective against bacterial and fungal spores.
Dynamic airflow smoke pattern test: A PEC test in which a visible source of smoke, which is neutrally buoyant, is used to observe air patterns within the unidirectional space (i.e., the DCA) under dynamic operating conditions (see the entry for *Dynamic operating conditions).* This test is not appropriate for ISO Class 7 or ISO Class 8 cleanrooms that do not have unidirectional airflow (see the entry for *Visual smoke study).*
Dynamic operating conditions: Conditions in the compounding area in which operating personnel are present and simulating or performing compounding. The conditions should reflect the largest number of personnel and highest complexity of compounding expected during routine operations as determined by the designated person(s).

GLOSSARY USP<797>
ECV: Endotoxin challenge vial.
EPA: US Environmental Protection Agency.
Excipient: See the entry for *Added substance.*
FDA: US Food and Drug Administration.
Filter integrity test: A test (eg, bubble point test) of the integrity of a sterilizing-grade filter performed after the filtration process to detect whether the integrity of the filter has been compromised.
Final yield: The total number of containers prepared at the end of the compounding process prior to release testing.
First air: The air exiting the HEPA filter in a unidirectional air stream.
Formulation: The specific qualitative and quantitative composition of the final CSP.
Garb: Items such as gloves, garments (eg, gowns), shoe covers, head and facial hair covers, masks, and other items designed to reduce particle shedding from personnel and minimize the risk of contamination of CSP(s).
GFT: Gloved fingertip and thumb testing.
Hazardous drug (HD): Any drug identified by at least one of the following six criteria: carcinogenicity, teratogenicity or developmental toxicity, reproductive toxicity in humans, organ toxicity at low dose in humans or animals, genotoxicity, or new drugs that mimic existing HDs in structure or toxicity.
High-efficiency particulate air (HEPA) filtration: Being, using, or containing a filter designed to remove 99.97% of airborne particles measuring 0.3-micron or greater in diameter passing through it.
HVAC: Heating, ventilation, and air conditioning.
Integrated vertical laminar flow zone (IVLFZ): A designated ISO Class 5 area serving as the PEC within an ISO Class 7 or cleaner buffer room. In the IVLFZ, unidirectional airflow is created by placing HEPA filters over the entire surface of the worktables and by effective placement of air returns.
IPA: Isopropyl alcohol.

GLOSSARY USP <797>
ISO class: An air-quality classification from the International Organization for Standardization.
ISO: International Organization for Standardization.
Label: The part of the labeling on the immediate container.
Labeling: All labels and other written, printed, or graphic matter on the immediate container or on or inside any packaging system or wrapper in which the article is enclosed, except any outer shipping container.
Laminar airflow system (LAFS): A device or zone within a buffer room that provides an ISO Class 5 or better air quality environment for sterile compounding. The system provides a unidirectional HEPA-filtered airflow.
Laminar airflow workbench (LAFW): A device that is a type of LAFS that provides an ISO Class 5 or better air quality environment for sterile compounding. The device provides a unidirectional HEPA-filtered airflow.
Line of demarcation: A visible line on the floor that separates the clean and dirty sides of the anteroom.
Low-lint wiper: A wiper exhibiting few, if any, fibers or other contamination, visible without magnification, which is separate from or easily removed from the wiper material in a dry condition.
Master formulation record (MFR): A detailed record of procedures that describes how the CSP is to be prepared.
MEA: Malt extract agar.
Media-fill test: A simulation used to qualify processes and personnel engaged in sterile compounding to ensure that the processes and personnel are able to prepare CSPs without contamination.
Monograph: A quality documentary standard within *USP–NF* that articulates the quality expectations for a medicine including for its identity, strength, purity, and performance. It also describes the tests to validate that a medicine and its ingredients meet these criteria.
Multiple-dose container: A container of sterile product for parenteral administration (eg, injection or infusion) that is designed to contain more than one dose of the sterile product. A multiple-dose container is usually required to meet the antimicrobial effectiveness testing criteria. See <659>Injection Packaging Systems, Multiple-dose container.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
One-step disinfectant cleaner: A product with an EPA-registered (or equivalent) claim that it can clean and disinfect a nonporous surface in the presence of light to moderate organic soiling without a separate cleaning step.
Oversight: The review, monitoring, and supervision of actions taken by personnel, bearing responsibility for those actions, and being available for consultation if and when needed, even if not physically present.
Pass-through chamber: An enclosure with sealed doors on both sides that should be interlocked. The pass-through chamber is positioned between two spaces for the purpose of minimizing particulate transfer while moving materials from one space to another.
Perimeter: A visible demarcation (such as a door, walls, or visible marking on the floor) that defines the SCA or AECA.
Pharmaceutical isolator: An enclosure that provides HEPA-filtered ISO Class 5 unidirectional air operated at a continuously higher pressure than its surrounding environment and is decontaminated using an automated system. It uses only decontaminated interfaces or rapid transfer ports for materials transfer. [Note—A CAI or CACI is not a pharmaceutical isolator.]
Pharmacy bulk package: A conventionally manufactured sterile product for parenteral use that contains many single doses intended for use in a pharmacy admixture program. A pharmacy bulk package may either be used to prepare admixtures for infusion or, through a sterile transfer device, for filling sterile containers. See <659>*Injection Packaging Systems, Pharmacy bulk package.*
Positive-pressure room: A room that is maintained at higher pressure than the adjacent spaces, and therefore the net airflow is out of the room.
PPE: Personal protective equipment.
Preservative: A substance added to inhibit microbial growth.
Primary engineering control (PEC): A device or zone that provides an ISO Class 5 air quality environment for sterile compounding.
Probability of a nonsterile unit (PNSU): The probability of an item being nonsterile after it has been exposed to a verified sterilization process. A PNSU value can only be applied to terminal sterilization. [Note—This is also called the sterility assurance level (SAL).]
Pyrogen: A substance that induces a febrile reaction in a patient.
Quality assurance (QA): A system of procedures, activities, and oversight that ensures that the compounding process consistently meets quality standards.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Quality control (QC): The sampling, testing, and documentation of results that, taken together, ensure that specifications have been met before release of the CSP.
Reconstitution: The process of adding a diluent to a conventionally manufactured product to prepare a sterile solution or suspension.
Release inspection and testing: Visual inspection and testing performed to ensure that a preparation meets appropriate quality characteristics.
Repackaging: The act of removing a sterile product or preparation from its original primary container and placing it into another primary container, usually of smaller size without further manipulation.
Restricted-access barrier system (RABS): An enclosure that provides HEPA-filtered ISO Class 5 unidirectional air that allows for the ingress and/or egress of materials through defined openings that have been designed and validated to preclude the transfer of contamination, and that generally are not to be opened during operations. Examples of RABS include CAIs and CACIs.
SDA: Sabouraud dextrose agar.
Secondary engineering control (SEC): The area where the PEC is placed (eg, a cleanroom suite or an SCA). It incorporates specific design and operational parameters required to minimize the risk of contamination within the compounding area.
Segregated compounding area (SCA): A designated space, area, or room that is not required to be classified and is defined with a visible perimeter. The SCA must contain a PEC and is suitable for preparation of Category 1 CSPs only.
Single-dose containers: A container of sterile product for parenteral administration (eg, injection or infusion) that is designed for use with a single patient as a single injection/infusion. A single-dose container usually does not contain a preservative. See <659> Injection Packaging Systems, Single-dose container.
SOP: Standard operating procedure.
Specification: The tests, analytical methods, and acceptance criteria to which any component, CSP, container closure system, equipment, or other material used in compounding CSPs must conform to be considered acceptable for its intended use.
Sporicidal disinfectant: A chemical or physical agent that destroys bacterial and fungal spores when used in sufficient concentration for a specified contact time. It is expected to kill all vegetative microorganisms.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Stability: The extent to which a product or preparation retains physical and chemical properties and characteristics within specified limits throughout its expiration or BUD.
Sterility assurance level (SAL): See the entry for *Probability of a nonsterile unit* (PNSU).
Sterility: The absence of viable microorganisms.
Sterilization by filtration: Passage of a gas or liquid through a sterilizing-grade membrane to yield filtrates that are sterile.
Sterilizing-grade filter: Filter membranes that are documented to retain 100% of a culture of 10^7 microorganisms of a strain of *Brevundimonas diminuta* per square centimeters of membrane surface under a pressure of not less than 30 psi. Such filter membranes are nominally 0.22- or 0.2-µm pore size.
Terminal sterilization: The application of a lethal process (eg, steam, dry heat, irradiation) to sealed containers for the purpose of achieving a predetermined PNSU of greater than 10−6 or a probability of less than one in one million of a nonsterile unit.
TSA: Trypticase soy agar.
Unclassified space: A space not required to meet any air cleanliness classification based on the ISO.
Unidirectional airflow: Air within a PEC moving in a single direction in a uniform manner and at sufficient velocity to sweep particles away from the DCA.
Verify: To confirm that a method, process, system, or equipment will perform as expected under the conditions of actual use.
Visual smoke study: A test, used in ISO Class 7 and ISO Class 8 rooms that do not have unidirectional airflow, in which a visible source of smoke, which is neutrally buoyant, is used to verify an absence of stagnant airflow. This test does not need to be performed under dynamic operating conditions and is not appropriate for PECs (see the entry for *Dynamic airflow smoke pattern test*).
Workflow management system: Technology comprised of hardware and/or software that allows for automation to assist in the verification of components of, and preparation of, CSPs and to document components and processes.

Section 9: Statement of Responsibility - MUST BE COMPLETED by an Authorized Person (NAC 639.945)

Statement of Responsibility

1. I am the Shibu John (title) for RxCompoundStore.ocm (name of Pharmacy) and in that capacity, I am authorized to speak on the Pharmacy's behalf.
2. I understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be responsible for any violations of pharmacy law that may occur in the Pharmacy owned by such owner(s), shareholder(s), member(s), or partner(s).
3. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be named in any action taken by the Nevada State Board of Pharmacy against the Pharmacy.
4. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) cannot require or permit the pharmacist(s) in said Pharmacy to violate any provision of local, state, or federal laws or regulations pertaining to the practice of pharmacy.
5. I further understand and acknowledge that Nevada law requires that each pharmacy located inside the State of Nevada employ only pharmacists, intern pharmacists, pharmaceutical technicians, and technicians in training that are licensed by the Nevada State Board of Pharmacy. (NRS 639.100).
6. I further understand and acknowledge that Nevada law requires that each pharmacy located outside the State of Nevada engaged in providing pharmacy services into Nevada employs at least one pharmacist licensed by the Nevada State Board of Pharmacy who will be responsible for any prescription dispensed to a patient located in Nevada and responsible for any acts or omissions of pharmacy personnel who are not registered with the Board. (NRS 639.2328).

8. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner member, officer or director) ever been refused a business license.		✔
9. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) ever surrendered a license, permit, certificate or registration relating to the pharmaceutical industry voluntarily or otherwise (other than upon voluntary closure of a manufacturer).		✔
10. Have you been diagnosed or treated for any mental illness, including alcohol or substance abuse, or physical condition that would impair your ability to perform the essential functions of your license?		✔

I certify under penalty of perjury that the information contained in this application is accurate, true and complete in all material respects. I understand that making any false representation in this application is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire application and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event this application is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

INV 359 - Community Requirements

Signage Requirements Section

Signage stating the hours the pharmacy department is open. [64B16-28.1081(2), F.A.C.]	Yes
"Prescription Department Closed" sign with bold letters not less than 2 inches in width and height is displayed in a prominent place where it is easily read by patrons. [64B16-28.109, F.A.C.]	Yes
Patient Consultation Area sign is posted. [64B16-30.003, F.A.C] [64B16-28.1035, F.A.C.]	Yes

Community Requirements General Section

Outdated medications removed from active stock. [64B16-28.110, F.A.C.] [64B16-28.1191, F.A.C.]	Yes
Prescription Department is open for a minimum of 20 hours per week. [64B16-28.1081(1), F.A.C.]	Yes
All controlled substance prescriptions (electronic, faxed, verbal and written) contain required information. [893.04(a)(b)(c), F.S.] [21CFR1306.05]	Yes
Certified daily log or signed printout maintained. [21CFR1306.22(f)(3)] [64B16-28.140(3)(d), F.A.C.]	Yes
Prescription department has current copy of laws and rules, references end equipment necessary to the professional practice of pharmacy. [64B16-28.102(5)(a), F.A.C.]	Yes
Technicians properly identified. [64B16-27.100(2), F.A.C.] [64B16-27.4001, F.A.C.] [64B16-27.410, F.A.C.] [64B16-27.420, F.A.C.]	Yes
Legend drugs properly stored within confines of pharmacy department and maintained at eppropriate temperature to preserve therapeutic activity. [64B16-28.118, F.A.C.]; [64B16-28.120, F.A.C.]; [64B16-28.102, F.A.C.]	Yes
Documentation of destruction or return of controlled substances. [64B16-28.303, F.A.C.]	Yes
Generic equivalent sign is posted. [465.025(7), F.S.]	Yes

Additional Community Requirements

Prescription department is operating under clean, sanitary, and uncrowded health conditions. [64B16-28.102, F.A.C.]	Yes
Prescription department has a sink with running water easily accessible to the prescription counter. [64B16-28.102, F.A.C.]	Yes
Pharmacist is on the premises and on duty when the prescription department is open. [64B16-28.109, F.A.C.]	Yes
Pharmacy maintains a written policy and procedure manual regarding the number of registered pharmacy technician positions and the pharmacy operates within the established ratio es defined by rule. [64B16-27.410(2)(a), F.A.C.]	Yes
Pharmacists, technicians, and interns are licensed in the State of Florida. [465.015(1)(a), F.S.]	Yes
Upon receipt of a new or refill prescription, a verbal and printed offer to counsel is made to the patient or the patient's agent. [64B16-27.820(1), F.A.C.]	Yes
Medication is properly labeled for dispensing to patient. [64B16-28.108, F.A.C.]	Yes
Unclaimed prescriptions are maintained in stock for no more than one year past dispensing date. [64B16-28.1191, F.A.C.]	Yes
Manufacturer containers are properly labeled. [499.003(26), F.S.]	Yes
Customized medication packages are labeled properly with beyond use date of not more than 120 days from the date of preparation but not later than the beyond use date for any of the medications in the package. [64B16-28.108(6)9., F.A.C.]	N/A
Continuous Quality Improvement Program described in the Pharmacy policy and procedure manual and quarterly summarization of Quality-Related Events are available for inspection. [64B16-27.300, F.A.C.] [766.101(1)(a)(l), F.S.]	Yes
Pharmacy maintains patient profile with allergy information and medications dispensed. [64B16-27.800, F.A.C.]	Yes
Compounding records include compounding date, lot number, expiration date, name and manufacturer of ingredients, peckage size, number of units, technician compounding and pharmacist verifying the final compound. [64B16-28.140(4), F.A.C.]	Yes
The pharmacy maintains an audit trail for all drugs from receipt or acquisition to sale or disposition [499.005, F.S.] [61N-1.012, F.A.C.]	Yes
Invoices for medications purchased from a Florida licensed wholesaler/distributor are retrievable for inspection. [499.005(14), F.S.]	Yes
Facility engaged in non-sterile office use compounding for human use is registered with FDA as an outsourcing facility. [64B16-27.700(3)(g), F.A.C.]	N/A
Signage indicating that any patient receiving testing, screening, or treatment services is advised to seek follow-up care from his or her primary care physician. [465.1895(9), F.S.]	N/A
Human Trafficking signage is posted in a conspicuous place accessible to employees that is at least 11 inches by 15 inches in size, printed in a clearly legible font and in at least a 32-point type which gives instructions in English and Spanish on how to report to the National Human Trafficking Resource Center. [456.0341, F.S.]	N/A

Requirements for Dispensing Controlled Substances

Controlled substance inventory taken on a biennial basis and available for inspection. [893.07(1)(a), F.S.] [21CFR1304.11]	Yes
DEA 222 forms properly completed or records of CSOS orders electronically completed, linked to the original order, archived and retrievable. [893.07(2), F.S.] [21CFR 1305.13(e)] [21CFR1305.22(g)]	N/A

INV359 - Community Requirements

Insp # 192043

RXCompoundStore.com LLC

File # 23995

Controlled substance records and prescription information in computer system are retrievable and maintained for 4 years. [465.022(12)(a), F.S.] [64B16-28.140, F.A.C.] [21CFR1306.22] [21CFR1304.04]	Yes
Pharmacy is reporting to law enforcement any instance of fraudulent prescriptions within 24 hours or close of business on next business day of learning of instance. Reports include all required information. [465.015(3), F.S.]	Yes
Record of theft or significant loss of all controlled substances is being maintained and reported to the sheriff and board within 24 hours of discovery. [893.07(5)(b), F.S.] [465.022(11)(b), F.A.C.]	N/A
Pharmacy is reporting to the PDMP within 24 hours of dispensing controlled substance. [893.055(4)(3)(a), F.S.]	Yes

Pharmacy Ships Medicinal Drugs to Patients [64B16-28.10801, F.A.C]

Pharmacy has policies and procedures in place to provide instructions to the patient on reporting concerns with delivery and storage of medicinal drugs.	Yes
Pharmacy has policies and procedures in place to ensure that medicinal drugs are not adulterated at the time of receipt by the patient or their agent.	Yes

Automated Pharmacy System [465.0235, F.S.]

Pharmacy maintains a record of the medicinal drugs dispensed, including the identity of the pharmacist responsible for verifying the accuracy of the dosage and directions and providing patient counseling.	
Pharmacy maintains written policies and procedures to ensure the proper, safe, and secure functioning of the automated pharmacy system for a minimum of 4 years.	

Pharmacy engages in Centralized Prescription Filling [64B16-28.450, F.A.C.]

Pharmacies have the same owner or have a written contract specifying the services to be provided by each pharmacy.	
The central fill pharmacy is identified by name and address or a by a code available at the originating pharmacy.	
Current P&P Manual available for inspection designating at minimum: types of medications that may be filled, procedures for communicating orders, procedures for securely transporting the filled prescriptions.	
If a controlled substance, the word "central fill" appears on the face of the original prescription.	
The originating pharmacy keeps a record of receipt of the filled prescription, including the date of receipt, method of delivery and the name of tha originating pharmacy's employee accepting delivery.	

Internet Pharmacy

A toll-free telephone number is provided to facilitate communication between patients in this state and a pharmacist at the pharmacy who has access to the patient's records. [465.0197 (3)(e), F.S.]	
Toll free number is disclosed on the label affixed to each container of dispensed medicinal drugs. [465.0197(3)(e), F.S.]	
Documentation of a valid, unexpired pharmacy license, permit or registration in the state in which the dispensing facility is located and from which the medicinal drugs shall be dispensed. [465.0197(3)(a) F.S]	

Remarks:

Last CQI meeting conducted on: 04/10/2024. Biennial Inventory of controlled substances completed on: 04/01/2024, No CII on stock. Pharmacy keeps a non-sterile compounding Log (Troches, Creams, suspensions, capsules, gels). Wholesaler: Smith, PCCA & Medisca. Medicinal Drugs ships thru an internal employee, Fedex & UPS.

I have read and have had this inspection report and the laws and regulations concerned herein explained, and do affirm that the information given herein is true and correct to the best of my knowledge.

INV797 - USP Sterile Compounding
(Revision 1, USP 797 2022. August 2024)
A. INTRODUCTION & SCOPE – ALL CATEGORIES

DESIGNATED PERSON: A designated person(s) is identified who is responsible and accountable for the performance and operation of the facility and personnel involved in the preparation of CSPs. [USP 797 Section 1.1.3]	Yes
IMMEDIATE USE COMPOUNDING: When preparing immediate use preparations, written SOPs are in place for all requirements and all criteria are met including 1. aseptic technique, processes, and procedures; and, 2. personnel are trained and demonstrate competency in aseptic processes as they relate to assigned tasks and SOP's, 3. the preparation is performed in accordance with evidence-based information for physical and chemical compatibility of the drugs, 4. the preparation involves not more than 3 different sterile products, 5. Any unused starting component from a single-dose container is discarded, 6. Administration begins within 4 hours following the start of preparation and, 7. Unless directly administered by the preparer or administration is witnessed by the preparer, the CSP is labeled with the names and amounts of all active ingredients, the name or initials of the preparer and the 4 hour period within which administration must begin. [USP 797 Section 1.3]	N/A

BAG & VIAL SYSTEM: Docking of vial and bag systems for future activation and administration is performed in an ISO 5 environment and BUDs are not longer than those specified in the manufacturer's labeling. [USP 797 Section 1.4]	Yes
REPACKAGING: Repackaging of sterile products or preparations from its original container into another container are prepared according to all applicable USP 797 requirements. [USP 797 Section 1.1.2]	Yes

B. COMPONENT BUDs (Single and Multi-dose Containers) – ALL CATEGORIES

SINGLE DOSE CONTAINERS (SDCs): SDCs are entered or punctured only in an ISO Class 5 or cleaner air and are used up to 12 hours after initial entry or puncture if the labeled storage requirements during that 12-hour period are maintained. [USP 797 Section 15.1]	N/A
AMPULES: Opened SINGLE DOSE AMPULES are used immediately and not stored for any time period. [USP 797 Section 15.1]	N/A
MULTIDOSE CONTAINERS (MDCs): Upon initially entering or puncturing a conventionally manufactured MDC, the MDC is not used for more than 28 days unless otherwise specified by the manufacturer on the labeling. [USP 797 Section 15.2] *BUD 3 months, no Exp date on multi-dose vial. No other BUD assigned*	No
PHARMACY BULK PACKAGES: Conventionally manufactured pharmacy bulk packages are entered or punctured only in an ISO Class 5 PEC and must be used according to the manufacturer's labeling. [USP 797 Section 15.3]	N/A
SINGLE DOSE COMPONENT CSPs & STOCK SOLUTIONS: When single-dose CSPs or CSP stock solutions are used as a component to compound additional CSPs, the original compounded single-dose component CSP or CSP stock solution is entered or punctured in ISO Class 5 or cleaner air and is stored under the conditions upon which its BUD is based (e.g., refrigerator or controlled room temperature). Once punctured, the component CSP is used for sterile compounding for up to 12 hours or its assigned BUD, whichever is shorter, and any remainder is discarded. [USP 797 Section 16.2]	Yes

C. CSP LABELING – ALL CATEGORIES

CSP LABEL REQUIREMENTS: CSP Immediate container label prominently and legibly displays 1) assigned internal identification number; 2) active ingredient(s) and their amount(s), or concentration(s); 3) storage conditions if other than controlled room temperature; 4) BUD; 5) dosage form; 6) total amount or volume; 7) statement if CSP is a single dose container (when space permits) or multi-dose container. Labeling of CSP displays 1) route of administration, 2) special handling instructions, 3) warning statements, and the compounding facility name and contact information if the CSP is sent outside of the facility in which it was compounded. [USP 797 Section 13]	Yes
ADDITIONAL REQUIREMENTS FOR A CLASS II OR III FACILITY: 1) Identification of responsible compounding personnel and/or dispensing pharmacist;2) labels for batch-prepared CSPs must also include: Control or lot number, auxiliary labeling (including precautions); and device-specific instructions. Patient specific medications must also include patient's name, location the medication is to be delivered to and directions for use. [USP 797 Section 13] [F.A.C.64B16-28.108(10)]	Yes
LABELING SOP: SOPs describe labeling procedures and are followed to prevent labeling errors and CSP mix-ups. [USP 797 Section 13]	Yes
LABEL VERIFICATION: CSP labels are verified to ensure that they conform with the prescription or medication order, MFR (if required), and the CR. [USP 797 Section 13]	Yes

D. PERSONNEL PREPARATION & OBSERVATION – ALL CATEGORIES

UNNECESSARY ITEMS: Personnel remove outer garments (e.g., bandanas, coats, hats, jackets, sweaters, vests); cosmetics, and all hand, wrist, and other exposed jewelry, including piercings that may interfere with effectiveness of garbing. Items not necessary for compounding (e.g., food, drinks, mints, gum, earbuds, headphones) are not introduced into the compounding environment. Accommodations are documented. [USP 797 Section 3.1]	Yes
NAILS: Nails are clean and trimmed. Nail products (e.g., polish, artificial nails, and extenders) are not worn. Personnel clean under nails under warm running water with a disposable nail cleaner. Hands and forearms are washed with soap and water for at least 30 seconds prior to entering a compounding area. [USP 797 Section 3.2]	Yes
REQUIRED PPE GARBING ORDER & STORAGE: Personnel garb (don and doff) in an order that reduces risk of contamination per SOP. Required garb, manner of storage, and order or garbing is documented in SOP's. The minimum required PPE when preparing CSPs includes a garment with sleeves that fit around wrists and enclosed neck, shoe covers, head/facial hair cover, face mask, and sterile powder-free gloves. All PPE is low lint for Category 1 & 2 compounding or sterile if Category 3. Gowns and other garb are stored in a manner that minimizes contamination (e.g., away from sinks) and within a classified area or SCA. [USP 797 Section 3.3]	Yes
INAPPROPRIATE HAND HYGIENE PRACTICES: Brushes and hand dryers are not used, and soap containers are not refilled or topped off. [USP 797 Section 3.2]	Yes
ALCOHOL-BASED HAND RUB: Hands are sanitized with alcohol-based hand rub prior to donning gloves. Handrub is used prior to donning garb when hand hygiene is done outside of a classified area. [USP 797 Section 3.3]	Yes
STERILE GLOVES USED: Sterile gloves are donned in classified room or SCA. Skin is not exposed inside ISO 5 PEC (e.g., gloves are not donned or doffed). [USP 797 Section 3.3]	Yes
SANITIZATION OF STERILE GLOVES: Sterile 70% IPA is applied to gloves prior to compounding and regularly throughout the compounding process. [USP 797 Section 3.3]	Yes
SANITIZATION OF ITEMS INTRODUCED INTO PEC: Items are wiped with sterile 70% IPA and sterile low-lint wipers just prior to being introduced into the PEC and allowed to dry before use. [USP 797 Section 8.2]	Yes
CRITICAL SITES (e.g., vial stoppers, ampule necks, and intravenous bag septum's) are wiped with sterile 70% IPA in the PEC to provide both chemical and mechanical actions to remove contaminants. The sterile 70% IPA is allowed to dry before personnel enter or puncture stoppers and septum's or break the necks of ampules. [USP 797 Section 8.3]	Yes
MATERIALS AND EQUIPMENT DISINFECTION: Before any item is introduced into the clean side of anteroom(s), placed into pass-through chamber(s), or brought into the SCA, it is wiped with a sporicidal disinfectant, EPA-registered disinfectant, or sterile 70% IPA using low-lint wipers by personnel wearing gloves. Dwell time is followed. [USP 797 Section 8.1 & 9.1]	Yes

E. EQUIPMENT, SUPPLIES, & COMPONENTS – ALL CATEGORIES

DAILY ACD ACCURACY ASSESSMENT: An accuracy assessment is conducted for Automated Compounding Devices (ACDs) or similar equipment before the first use and again each day the equipment is used to compound CSPs. A daily record of accuracy measurements is maintained. Corrective actions are implemented if accuracy measurements are outside of manufacturer's specifications. [USP 797 Section 9.1]	Yes
EQUIPMENT SOPs: Written SOPs for the calibration, maintenance, cleaning, and use of equipment are established and are based on the manufacturer's recommendations. Procedures are followed and records are maintained. [USP 797 Section 9.1] *no SOP at time of inspection*	No

F. SEGREGATED COMPOUNDING AREA: Category 1

CATEGORY 1 MAXIMUM BUDs & COMPOUNDING AREA REQUIREMENTS: Category 1 CSPs are compounded in an ISO class 5 PEC located within a SCA and are assigned a BUD of 12 hours or less at controlled room temperature or 24 hours or less when refrigerated. [USP 797 Section 1.5, 4.2.1]	
DEDICATED AREA FOR SCA: The SCA is separated from areas not directly related to compounding, and all surfaces (walls, floors, counters, and equipment) are clean, uncluttered, and dedicated to compounding. [USP 797 Section 4.2.1]	
SCA LOCATION: The SCA is located away from unsealed windows, doors that connect to the outdoors, and traffic flow, all of which may adversely affect the air quality in the PEC. SCA is not located where environmental control challenges (e.g., restrooms, warehouses, or food preparation areas) could negatively affect the air quality of the PEC within the SCA. A sink is not located within 1 meter of PEC. [USP 797 Section 4.2.1]	
ITEMS WITHIN SCA: Only furniture, equipment, and other materials necessary for performing compounding activities are located within the SCA. [USP 797 Section 4.2.1]	

G. FACILITIES & SECONDARY ENGINEERING CONTROLS – Categories 2 and 3

STERILE SUITE CONSTRUCTION: The ISO-classified anteroom and buffer room are separated from the surrounding unclassified areas of the facility by fixed walls and doors, and controls are in place. [USP 797 Section 4.2.1]	Yes
HEPA FILTERED AIR: Air supplied to the cleanroom suite is introduced through HEPA filters located in the ceiling of the buffer room and anteroom. [USP 797 Section 4.2.1]	Yes
AIR RETURNS: Air returns in the cleanroom suite are low on the wall unless a visual smoke study demonstrates an absence of stagnant airflow. [USP 797 Section 4.2.1] *smoke study available*	Yes
LINE OF DEMARCATION: The anteroom has a line of demarcation to separate the clean side from the dirty side. [USP 797 Section 4.2.1]	Yes
SURFACES & WALLS: The surfaces of ceilings, walls, floors, doors, door frames, fixtures, shelving, work surfaces, counters, and cabinets in the classified area are smooth, impervious, free from cracks and crevices, and non-shedding. Walls are constructed of/or covered with durable material. [USP 797 Section 4.3.1]	Yes
CEILINGS & FLOORS: Inlaid panels of ceilings are caulked around each panel to seal them to the support frame. Junctures between the ceiling and the walls and between the walls and the floor are sealed to eliminate cracks and crevices where dirt can accumulate. Floors include coving to the sidewall, or the juncture between the floor and the wall are caulked. [USP 797 Section 4.3.1]	Yes
LEDGES & OVERHANGS: Overhangs and ledges are easily cleanable, and the exterior lens surface of ceiling light fixtures are smooth, mounted flush, and sealed. [USP 797 Sections 4.3.1]	Yes
FURNITURE, EQUIPMENT, & MATERIALS: Only furniture, equipment, and other materials necessary for performing compounding activities are permitted in a classified area or SCA. Tacky mats are not placed within ISO-classified areas. Carts used to transport components or equipment into classified areas are constructed from nonporous materials with cleanable casters and wheels. [USP 797 Sections 4.2.1 & 4.5]	Yes
TEMPERATURE & HUMIDITY MONITORING: Temperature and humidity in the cleanroom suite are controlled through a heating, ventilation, and air conditioning (HVAC) system. The temperature and humidity are monitored in each room of the cleanroom suite each day that compounding is performed, either manually or by a continuous recording device. They are documented at least once daily or stored in the continuous recording device and are retrievable and are reviewed as described in the facility's SOP. [USP 797 Section 4.2]	Yes
PRESSURE DIFFERENTIATION MONITORING & DOCUMENTATION: Facility maintains a minimum differential positive pressure of 0.020-inch water column between the nonhazardous buffer room to anteroom and anteroom to unclassified area. A pressure differential monitoring device is used to continuously monitor the pressure differentials. Quantitative results from the pressure monitoring device are reviewed and documented at least daily on the days when compounding is occurring. [USP 797 Sections 4.2.5]	Yes
PEC LOCATION: PECs are located in a buffer room in a manner that minimizes conditions that could increase the risk of microbial contamination (strong air currents, personnel traffic, or air streams from HVAC system(s)) and allows for cleaning around the PEC. [USP 797 Sections 4.2.2 & 4.2.3]	Yes
INTEGRATED VERTICAL LAMINAR FLOW ZONES: IVLFZ is separated from ISO Class 7 area with a physical barrier and there is full coverage of HEPA filters above the work surface. [USP 797 Section 4.2.3]	Yes

H. CERTIFICATION AND RECERTIFICATION – ALL CATEGORIES

PEC & SEC CERTIFICATION: PECs are certified initially and every 6 months to meet ISO Class 5 or better conditions, during dynamic operating conditions. SECs are certified initially and every 6 months to meet ISO Class 7 or 8 or better conditions, during dynamic operating conditions (including presterilization activities if applicable). Anterooms providing access to positive-pressure buffer rooms are at least ISO 8 and at least ISO 7 for anterooms providing access to negative-pressure buffer rooms. ISO Class 7 rooms maintain a minimum of 30 total HEPA-filtered ACPH during dynamic operating conditions, at least 15 ACPH come from the HVAC through HEPA filters located in the ceiling. ISO Class 8 rooms maintain a minimum of 20 total HEPA-filtered ACPH during dynamic operating conditions; 15 ACPH must come from the SEC. The ACPH from HVAC, ACPH contributed from the PEC, and the total ACPH are documented on the certification report. HEPA filter integrity testing for both SECs & PECs is conducted initially and every 6 months as part of total particle testing. Classified areas are recertified when changes occur that could affect airflow or air quality [USP 797 Sections 4.1, 4.2.4, 4.2.6, & 5.0]	Yes
DOCUMENTATION OF PERSONNEL PRESENT DURING CERTIFICATION: The number of personnel present in each PEC and SEC during total particle counts and dynamic airflow smoke-pattern tests is documented on the certification report. [USP 797 Section 5.0]	Yes
PEC DYNAMIC SMOKE PATTERN TEST: Smoke pattern tests are performed under dynamic conditions initially to demonstrate minimal disruption in airflow and repeated if equipment is placed in a different location. Smoke pattern tests are performed under dynamic conditions every 6 months to demonstrate unidirectional airflow and sweeping action over and away from the preparation(s). [USP 797 Section 5.0]	Yes
ROBOTICS / ROBOTIC ENCLOSURES: Robotic enclosures used as a PEC or placed within a PEC have a dynamic airflow smoke pattern test is performed initially and at least every 6 months that confirms 1) the robotic device is properly integrated into the facility, 2) there is no turbulence or refluxing at any critical site(s), 3) room air does not enter the PEC where sterile products and/or preparations may be exposed, and 4) all processes can be performed without introducing contamination to the DCA(s). [USP 797 Section 4.2.3]	N/A
MONITORING DEVICE CERTIFICATION: Temperature and humidity monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. [USP 797 Section 4.2] *No SOP or documentation available at the time of inspection*	No
CONTAINMENT DEVICES USED FOR PRESTERILIZATION PROCEDURES: CVEs, BSCs, or CACIs used for presterilization procedures are certified at least once every 6 months. Presterilization procedures do not adversely affect the required air quality of the SEC as demonstrated during certification under dynamic operating conditions. [USP 797 Section 4.2.6]	Yes
CERTIFICATION REPORT REVIEW BY DESIGNATED PERSON: All certification and recertification records are reviewed by the designated person(s). A corrective action plan is implemented and documented in response to any out-of-range results on certification report and data reviewed to confirm that the actions taken have been effective. [UPS 797 Section 5.0] *no document available at the time of inspection*	No

I. RABS

LOCATION: If used to prepare Category 2 or Category 3 CSP's RABS are located in a cleanroom suite with an ISO Class 7 or better buffer room with an ISO Class 8 or better anteroom. [USP 797 Section 4.2.3]	
RECOVERY TIME: When a RABS is used, the recovery time after opening the transfer chamber to achieve ISO Class 5 air is documented and internal procedures are developed to ensure that adequate recovery time is allowed after opening and closing the RABS. [USP 797 Section 4.2.3]	
STERILE GLOVES: are worn over gloves attached to RABS sleeves. [USP 797 Section 3.3]	

J. CATEGORY 2 CSPs WITHOUT STERILITY TESTING

CATEGORY 2 COMPOUNDING ENVIRONMENT: Category 2 CSPs are compounded in an ISO class 5 PEC located within an ISO classified anteroom and buffer room. [USP 797 Sections 4.1 & 14.3]	
CATEGORY 2 BUDs FROM STERILE COMPONENTS WITHOUT STERILITY TESTING: Category 2 CSPs compounded aseptically from all sterile starting components and in the absence of sterility testing do not exceed the following BUDs: 4 days room temperature, 10 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3]	
CATEGORY 2 BUDs FROM NONSTERILE COMPONENTS WITHOUT STERILITY TESTING: Category 2 CSPs compounded aseptically from one or more nonsterile starting components and in the absence of sterility testing do not exceed the following BUDs: 1 day room temperature, 4 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3]	

K. CATEGORY 2 EXTENDED BUD REQUIREMENTS

CATEGORY 2 BUDs FOR ASEPTICALLY PROCESSED CSPs WITH STERILITY TESTING: Category 2 CSPs compounded aseptically, and which have passed sterility testing do not exceed the following BUDs: 30 days room temperature, 45 days refrigerated, or 60 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *visual inspection of CSP vial: BUD 90 days*	No
CATEGORY 2 BUDs FOR TERMINALLY STERILIZED CSPs WITHOUT STERILITY TESTING: Category 2 CSPs terminally sterilized and in the absence of sterility testing do not exceed the following BUDs: 14 days room temperature, 28 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *sterility testing performed on all batches*	N/A
CATEGORY 2 BUDs FOR TERMINALLY STERILIZED CSPs WITH STERILITY TESTING: Category 2 CSPs terminally sterilized, and which have passed sterility testing do not exceed the following BUDs: 45 days room temperature, 60 days refrigerated, or 90 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *90 days BUD with refrigeration*	No
ANTIMICROBIAL EFFECTIVENESS TESTING FOR MULTI-DOSE CSPs: Aqueous multiple-dose CSPs (e.g., injectables and ophthalmics) pass USP <51> compliant antimicrobial effectiveness testing once for each unique formulation and each container closure system in which it is packaged. Bracketing studies are allowed. [USP 797 Section 14.5 & 16.1]	Yes
CONTAINER CLOSURE TESTING: Container closure integrity testing is performed once for each unique CSP formulation and container closure system in which it is packaged. For multi-dose (i.e., preserved CSPs), container integrity testing is performed per fill volume for each unique CSP formulation and container closure system. [USP 797 Sections 14.3.3 & 14.5]	Yes
MULTI-DOSE, NON-PRESERVED AQUEOUS CSPs: Multi-dose, non-preserved aqueous CSPs (i.e., topical, or ophthalmic solutions) are assigned are prepared as a Category 2 CSP, for use by a single patient, and labeled to indicate that once opened, the CSP must be discard after 24 hours if stored at controlled room temperature or 72 hours when stored under refrigeration. [USP 797 14.5]	N/A
MULTI-DOSE CSPs USED AS A COMPONENT: Meet the criteria for anti-microbial effectiveness testing (see <51>) if aqueous, are stored under the conditions upon which the BUD is based, Multiple-dose CSP after initially entered or punctured, are not used for longer than the assigned BUD or 28 days, whichever is shorter. [USP 797 Sections 14.5 & 16.1]	N/A
OUTSOURCED STERILITY TESTING: Sterility testing is performed for all Category 2 CSPs assigned a BUD requiring sterility testing according to USP <71> or a validated alternative and noninferior method. Membrane Filtration as described in USP <71> is the preferred method when the formulation allows. [USP 797 Section 12.2]	Yes
INHOUSE STERILITY TESTING: Sterility testing is according to USP <71> or a validated alternative and noninferior method. Membrane filtration is used if appropriate and filters are rinsed according to USP <71>. Direct inoculation is done only when membrane filtration cannot be carried out. Volume inoculated does not exceed 10% of the culture media volume. Growth promotion test has been done on the media with the 5 specified organisms (not more than 100 CFU) according to USP <71>. TSB or SCD is incubated at 20-25C for 14 days; FTM is incubated at 30-35C for 14 days. (2 incubators present). *testing outsourced*	N/A
METHOD SUITABILITY TEST: A Method Suitability Test (or equivalent validation for alternative testing methods) is performed to validate suitability of the sterility testing method. [USP 797 Section 12.2]	Yes
MAXIMUM BATCH SIZE: The maximum batch size for all CSPs requiring sterility testing is 250 final yield units. [USP 797 Section 12.2]	Yes
INVESTIGATION OF STERILITY TEST FAILURES: Sterility tests resulting in failure undergo prompt investigation into possible causes and requires identification of the microorganism(s) as well as evaluation of sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. Impact to other CSPs is assessed. Investigation and resulting corrective actions are documented. [USP 797 Section 12.2] *not available at the time of inspection*	No
STERILITY TESTING QUANTITY & VOLUME DETERMINATION: The minimum quantity of each container tested for sterility is per USP <71> Table 2 and the number of containers tested in relation to the batch size is per USP <71> Table 3. For 1-39 CSPs compounded as single batch, sterility testing is performed on a number of containers or units equal to 10% of the number of CSPs prepared rounded to the next whole number. [USP 797 Section 12.2]	Yes
ENDOTOXIN TESTING: Category 2 injectable CSPs compounded from one or more nonsterile component(s) and assigned a BUD that requires sterility testing are tested for bacterial endotoxins. [USP 797 Section 12.3]	Yes
ENDOTOXIN LIMITS: In the absence of a bacterial endotoxin limit in an official USP–NF monograph or other CSP formula or scientifically supported source, the CSP does not exceed the endotoxin limit calculated as described in USP <85> for the appropriate route of administration for humans or largest recommend dose per weight for nonhuman species. [USP 797 Section 12.3]	Yes

L. CATEGORY 3 CSPs, BUDs, & RELATED REQUIREMENTS

CATEGORY 3 REQUIREMENTS: All requirements associated with Category 3 compounding (e.g., garbing, cleaning, environmental monitoring) apply to all personnel entering the buffer room where Category 3 CSPs are compounded and always apply regardless of whether Category 3 CSPs are compounded on a given day. [USP 797 Section 14.4.2]	
STERILE/SINGLE USE GARB: When compounding Category 3 CSPs, skin is not exposed in buffer room (i.e., face and neck are covered) and all low lint outer garb is sterile, including sterile sleeves over RABS gauntlet sleeves. Disposable garb items are not reused. [USP 797 Section 3.3]	

STERILIZED/REUSABLE GARB: Non-disposable garb is not reused without being laundered and resterilized with a validated cycle. Disinfection procedures described in facility SOPs are followed before reusing goggles, respirators, and other equipment. [USP 797 Section 3.3]	
CATEGORY 3 BUDs FOR ASEPTICALLY PROCESSED CSPs: Category 3 CSPs aseptically processed, sterility tested, and passing all applicable tests (including stability indicating assay, endotoxin, and other dosage form appropriate tests) do not exceed the following BUDs: 60 days room temperature, 90 days refrigerated, or 120 days frozen. Shorter BUDs are assigned when physical or chemical stability of the CSP is less than the maximum allowable Category 3 BUDs for aseptically processed CSPs. [USP 797 Section 14.4.3]	
CATEGORY 3 BUDs FOR TERMINALLY STERILIZED CSPs: Category 3 CSPs aseptically processed, sterility tested, and passing all applicable tests (including stability indicating assay, endotoxin, and other dosage form appropriate tests) do not exceed the following BUDs: 90 days room temperature, 120 days refrigerated, or 180 days frozen. Shorter BUDs are assigned when physical or chemical stability of the CSP is less than the maximum allowable Category 3 BUDs for terminally sterilized CSPs. [USP 797 Section 14.4.3]	
MAXIMUM BATCH SIZE: Category 3 CSP batch sizes do not exceed 250 final yield units. [USP 797 Section 12.2]	
STABILITY INDICATING ASSAYS: All Category 3 CSP formulations are supported by data obtained using a validated stability-indicating analytical method that can distinguish active ingredients from degradants and impurities and quantify the amount of active ingredient. CSPs are prepared according to the exact formulation, components, and packaged in a container closure system of the same materials of composition. Facilities have documentation of the stability study, its results, and the method validation available for review. [USP 797 Section 14.3.3]	
STERILITY TESTING: All category 3 CSPs and batches undergo sterility testing performed according to USP <71> or a validated alternative and noninferior method. [USP 797 Sections 12.2 & 14.4.4]	
METHOD SUITABILITY TEST: A Method Suitability Test (or equivalent validation for alternative testing methods) is performed to validate suitability of the sterility testing method for each formulation. [USP 797 Section 12.2]	
STERILITY TESTING QUANTITY & VOLUME DETERMINATION: The minimum quantity of each container tested for sterility is per USP <71> Table 2 and the number of containers tested in relation to the batch size is per USP <71> Table 3. For 1-39 CSPs compounded as single batch, sterility testing is performed on a number of containers or units equal to 10% of the number of CSPs prepared rounded to the next whole number. [USP 797 Section 12.2]	
INVESTIGATION OF STERILITY TEST FAILURES: Sterility tests resulting in failure undergo prompt investigation into possible causes and requires identification of the microorganism(s) as well as evaluation of sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. Impact to other CSPs is assessed. Investigation and resulting corrective actions are documented. [USP 797 Section 12.2]	
ENDOTOXIN TESTING: Category 3 injectable CSPs compounded from one or more nonsterile component(s) are tested for bacterial endotoxins. [USP 797 Section 12.3]	
ENDOTOXIN LIMITS: In the absence of a bacterial endotoxin limit in an official USP–NF monograph or other CSP formula or scientifically supported source, the CSP does not exceed the endotoxin limit calculated as described in USP <85> for the appropriate route of administration for humans or largest recommend dose per weight for nonhuman species. [USP 797 Section 12.3]	
PARTICULATE MATTER TESTING: Category 3 injectable CSPs undergo USP <788> (Particulate Matter in Injections) and ophthalmic solutions undergo USP <789> (Particulate Matter in Ophthalmic Solutions) test once per formulation with acceptable results. [USP 797 Section 14.3.3]	
ANTIMICROBIAL EFFECTIVENESS TESTING FOR MULTI-DOSE CSPs: Aqueous multiple-dose CSPs (e.g., injectables and ophthalmic) pass USP <51> compliant antimicrobial effectiveness testing once for each unique formulation and each container closure system in which it is packaged. Bracketing studies are allowed. [USP 797 Section 14.5 & 16.1]	
CONTAINER CLOSURE TESTING: Container closure integrity testing is performed once for each unique CSP formulation and container closure system in which it is packaged. For multi-dose (i.e., preserved multi-dose CSPs), container closure integrity testing is also performed per fill volume for each unique CSP formulation and container closure system. [USP 797 Sections 14.3.3 & 14.5]	
MULTI-DOSE, NON-PRESERVED AQUEOUS CSPs: Multi-dose, non-preserved aqueous CSPs (i.e., topical, or ophthalmic solutions) are prepared for use by a single patient, and labeled to indicate that once opened, the CSP must be discard after 24 hours if stored at controlled room temperature or 72 hours when stored under refrigeration. [USP 797 14.5]	
MULTI-DOSE CSPs USED AS A COMPONENT: Meet the criteria for anti-microbial effectiveness testing (see <51>) if aqueous, are stored under the conditions upon which the BUD is based, Multiple-dose CSP after initially entered or punctured, are not used for longer than the assigned BUD or 28 days, whichever is shorter. [USP 797 Sections 14.5 & 16.1]	

M. PERSONNEL TRAINING & COMPETENCIES - ALL CATEGORIES

TRAINING PROGRAM & SOP: Facility maintains a written training program and corresponding SOP which defines required trainings, frequency of training and the process for evaluating the performance of individuals who compound, have direct oversight of compounding personnel, perform in-process checks, final verification and dispensing of CSP's. The training program equips personnel with the appropriate knowledge and training in the required skills necessary to perform their assigned tasks. [USP 797 Section 2]	Yes
INITIAL DIDACTIC TRAINING & SKILLS ASSESSMENT: Before beginning to compound CSPs independently or have direct oversight of compounding personnel, personnel complete training and can demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions as applicable to their assigned job functions. [USP 797 Section 2.1]	Yes
INITIAL GLOVED FINGERTIP & HAND HYGIENE/GARBING COMPETENCY: Before beginning to compound independently or have direct oversight of compounding personnel, personnel successfully complete an initial gloved fingertip (GFT) competency no fewer than 3 separate times, with a documented visual audit while performing hand hygiene and garbing procedures. GFT samples are collected before applying sterile 70% IPA to gloves. [USP 797 Section 2.2]	Yes
INITIAL MEDIA FILL & ASEPTIC TECHNIQUE ASSESSMENT: Before beginning to compound independently or have direct oversight of compounding personnel, personnel who compound or have direct oversight of compounding successfully complete an initial aseptic manipulation competency evaluation which consists of a visual observation, media-fill testing followed by a gloved fingertip and thumb sampling on both hands, and surface sampling of the direct compounding area. [USP 797 Section 2.3]	Yes
GFT & MEDIA FILL INCUBATION: Documentation includes the name of the person evaluated, evaluation date and time, media and components used to include their manufacturer or supplier, expiration dates and lot numbers, starting temperature for each interval of incubation, dates of incubation, the results, and the names or other identification of the observer and the person who reads and documents the results. [USP 797 Section 2.3]	Yes
ONGOING CATEGORY 1 AND 2- GFT & GARBING ASSESSMENT: After initial garbing competency evaluations, compounding personnel complete garbing competency evaluation and GFT every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete garbing competency and GFT every 12 months. GFTs are appropriately incubated. [USP 797 Section 2.2] *GFT done annually for 1 Tech 4/30/25 and 8/7/24. 3 new personnel less than 6 months*	No
ONGOING CATEGORY 1 AND 2- MEDIA FILL & ASSESSMENT: After initial aseptic manipulations competency evaluations, compounding personnel complete aseptic technique competency, media fill, GFTs, and surface sampling of DCA every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete media fill every 12 months. GFTs and surface samples are appropriately incubated. [USP 797 Section 2.3] *GFT done annually for 1 Tech 4/30/25 and 8/7/24. 3 new personnel less than 6 months*	No

ONGOING KNOWLEDGE & COMPENTENCY OF CORE SKILLS: Training and knowledge assessment of sterile compounding principles or core skills is completed at least every 12 months. [USP 797 Section 2.1]	Yes
FAILED COMPETENCY INVESTIGATION: Initial and ongoing competency assessment failures are investigated, remediated, and documented in a Corrective Action Plan. [USP 797 Sections 2.2 & 2.3] *No Competency failures documented*	N/A
STAFF TRAINING IN VIABLE AIR AND SURFACE SAMPLING: Personnel are trained and competent in air and surface sampling procedures to ensure accurate and reproducible sampling. [USP 797 Section 6.1]	Yes
CLEANING PERSONNEL: Cleaning and disinfecting activities are performed by trained and appropriately garbed personnel using facility-approved agents and procedures. Cleaning personnel demonstrate knowledge and competency of core skills related to cleaning, disinfection, and maintenance of environmental conditions initially and at least once every 12 months. [USP 797 Sections 7 & 2.1] *No documentation available at the time of inspection*	No

FACILITY COMPOUNDS CATEGORY 3

ONGOING CATEGORY 3 GFT & GARBING ASSESSMENT: After initial garbing competency evaluations, compounding personnel complete garbing competency and GFT every 3 months for Category 3 CSP's. Direct oversight personnel who do not compound complete garbing competency and GFT every 12 months. GFTs are appropriately incubated. [USP 797 Section 2.2]	
ONGOING CATEGORY 3 ASEPTIC PROCESSING COMPETENCY: Aseptic competency is repeated at least one time every 3 months for personnel compounding Category 3 CSPs. The simulation must capture elements that could potentially affect the sterility of the CSP. Immediately following the media-fill test, gloved fingertip and thumb sampling is performed on both hands and surface sampling of the direct compounding area. Direct oversight personnel who do not compound must complete media fill every 12 months. [USP 797 Section 2.3]	

N. MICROBIOLOGICAL AIR AND SURFACE MONITORING: ALL CATEGORIES

ENVIRONMENTAL MONITORING PROGRAM & SOPs: The microbiological air and surface monitoring program is clearly described in the facility's SOPs, which includes a diagram of the sampling locations, procedures for collecting samples, frequency of sampling, size of samples (e.g., surface area, volume of air), time of day of sampling in relation to activities in the compounding area, and action levels that trigger corrective action. [USP 797 Section 6]	Yes
VIABLE AIR SAMPLING: Volumetric active air sampling using an impaction air sampler collecting at least 1000L of air is conducted in each classified area [e.g., ISO Class 5 PEC and ISO Class 7 and 8 room(s)] during dynamic operating conditions and is completed at least every 6 months. [USP 797 Section 6.2]	Yes
AIR IMPACTION DEVICE: Device is serviced and calibrated according to the manufacturer's recommendations. [USP 797 Section 6.1]	Yes
SURFACE SAMPLING: Microbiological surface sampling is conducted in all classified areas and pass-through chambers under dynamic operating conditions and performed at least once monthly. [USP 797 Section 6.3]	Yes
GROWTH MEDIA: A general microbiological growth media that supports the growth of bacteria and fungi is used and a COA from the manufacturer is available. Growth media used for surface sampling contains neutralizing agents (e.g., lecithin and polysorbate 80). [USP 797 Sections 6.2 & 6.3]	Yes
MEDIA INCUBATION: Samples are incubated at 30°C - 35°C for 48 hours and 20°C - 25°C for an additional 5 days; if dual growth media are used, incubate one media device at 30°C - 35°C for 48 hours and the second media device at 20°C - 25°C for 5 days. The incubator temperature is monitored during incubation, either manually or by a continuous recording device, and results are reviewed and documented as described in the facility's SOPs. Incubators are placed in a location outside of the sterile compounding area. [USP Sections 6.2.2 (Box 5) & 6.3.2 (Box 6)]	Yes
ENVIRONMENTAL MONITORING TREND ANALYSIS: Regular review of sampling data is performed to detect trends and review of trending data is documented. [USP 797 Section 6.1]	Yes
CORRECTIVE ACTION: When microbial growth exceeds action levels, the cause is investigated, and corrective action is taken; corrective actions taken are reviewed for effectiveness. An attempt to identify microorganisms at the genus level is made. [USP Sections 6.2.3 & USP 6.3.3]	Yes

FACILITY COMPOUNDS CATEGORY 3

CATEGORY 3-VIABLE AIR SAMPLING: Volumetric air sampling is completed within 30 days prior to the commencement of any Category 3 compounding and at least monthly thereafter regardless of the frequency of compounding Category 3 CSPs.Air sampling sites are selected in all classified areas. [USP 797 6.2.1]	
CATEGORY 3-SURFACE SAMPLING: Surface sampling for any Category 3 CSPs, is completed in all classified areas, and pass-through chambers connecting to classified areas, prior to assigning a BUD longer than BUD limits for Category 2 CSPs (defined in Table 13 of USP 797) and at least weekly on a regularly scheduled basis regardless of the frequency of compounding Category 3 CSPs. [USP 797 6.2.2]	
CATEGORY 3-BATCH SURFACE SAMPLING: Surface sampling is conducted within the PEC used to prepare Category 3 CSPs, at the end of each batch before cleaning and disinfection occurs, unless a self-enclosed robotic device is used. When a self-enclosed robotic device is used as the PEC, surface sampling is conducted at least once daily at the end of compounding operations before cleaning and disinfection occurs. [USP 797 Section 6.3.2]	

O. CLEANING AND DISINFECTING: ALL CATEGORIES

CLEANING SOPS: The frequency, method(s), documentation requirements, and location(s) of cleaning, disinfecting, and applying sporicidal disinfectants are described in written SOPs; use of agents is in accordance with manufacturer's instructions, procedures, and in adherence with minimum wet contact times. SOPs describe the time period during which, once opened, sterile cleaning and disinfecting agents, supplies, and sterile 70% IPA may be reused. Sterile water is used to dilute concentrated cleaning agents used inside of PECs (if applicable). Cleaning and disinfecting agents are EPA-registered. If a one-step disinfectant cleaner is not used, surfaces are cleaned prior to being disinfected. [USP 797 Section 7]	Yes
DAILY PEC CLEANING & DISINFECTION WITH STERILE AGENTS: Equipment and all interior surfaces of the PEC are cleaned and disinfected daily on days when compounding occurs and when surface contamination is known or suspected. Sterile 70% IPA is applied after cleaning, disinfecting, or after one-step disinfectant cleaner or sporicidal agent application to remove residue. [USP 797 Section 7]	Yes
CATEGORY 1 AND 2-MONTHLY PEC SPORICIDAL DISINFECTION: Equipment and all interior surfaces of the PEC, including underneath of removable work trays, are cleaned with a sporicidal agent monthly. [USP 797 Section 7]	Yes
DAILY SEC & SCA CLEANING & DISINFECTION: Work surfaces, floors, sink surfaces, and pass-through chambers are cleaned and disinfected daily on days when compounding occurs. [USP 797 Section 7]	Yes
CATEGORY 1 AND 2 -MONTHLY PEC, SEC & SCA SPORICIDAL DISINFECTION: Equipment and all interior surfaces of the PEC, including underneath of removable work trays, work surfaces, pass-through chambers, storage shelving and bins, equipment outside of PEC's, sink surfaces, floors, ceilings*, walls, doors, and doors frames at least once monthly. SCA ceilings (if applicable) are only cleaned, disinfected, and have sporicidal agents applied when visibly soiled and when surface contamination is known or suspected. [USP 797 Section 7]	Yes
PEC SANITIZATION WITH STERILE 70% IPA: Sterile 70% IPA is applied to the horizontal work surface, including removable trays, immediately before initiating compounding and at least every 30 minutes. If a compounding process takes more than 30 minutes, the work surface is disinfected immediately after the end of the compounding process. Sterile 70% IPA is allowed to dry. [USP 797 Section 7] *compounding syringes and equipment introduced to PEC prior to cleaning of surface*	No

CLEANING SUPPLIES & TOOLS: All cleaning and disinfecting supplies (e.g., wipers, sponges, pads, and mop heads), except for tool handles and holders, are low lint. Supplies used inside PECs are sterile. [USP 797 Section 7.1.2]	Yes
REUSABLE CLEANING TOOLS: Reusable cleaning tools (e.g., mop frames) are made of cleanable materials and are cleaned and disinfected before and after each use. Reusable tools are dedicated for use in the classified areas or SCA and are not removed. Mops used in HD compounding areas, are dedicated for use only in those areas. [USP 797 Section 7.1.2]	Yes

FACILITY COMPOUNDS CATEGORY 3

WEEKLY SPORICIDAL CLEANING OF PECs & SECs: Weekly cleaning using a sporicidal agent is performed on all internal surfaces of PEC and equipment in PEC's, on work surfaces outside the PEC, pass-through chambers, and floors. [USP 797 Section 7]	
MONTHLY SEC SPORICIDAL DISINFECTION: A sporicidal disinfectant is applied to storage shelving and bins, equipment outside of PEC's, sink surfaces, ceilings, walls, doors, and doors frames at least once monthly. [USP 797 Section 7]	

P. COMPOUNDING CSPs FROM NONSTERILE COMPONENTS OR SUPPLIES – CATEGORY 2 & 3

PRESTERILIZATION ACTIVITY CONTAINMENT ENCLOSURES: Pre-sterilization procedures, such as weighing and mixing of nonsterile components, occur in ISO Class 8 or better environment (e.g., anteroom or buffer room) and are performed in single-use containment glove bags, CVEs, BSCs, or CACIs. [USP 797 Section 4.2.6]	Yes
LOCATION OF STERILE & NONSTERILE PECs: PECs used for sterile and nonsterile compounding (e.g., pre-sterilization procedures) are placed in separate rooms unless the buffer room can maintain an ISO Class 7 classification during particulate generating activities. Co-located PECs are at least 1 meter apart and particle-generating activities are not performed during sterile compounding processes [USP 797 Section 4.2.1; USP 800 Section 5.3]	Yes
COMPONENT SOPs: Written SOPs address the selection, receipt, evaluation, handling, storage, and documentation of all CSP componenta including ingredients and container closures. [USP 797 Section 9.3]	Yes
COMPONENT QUALITY & COA: APIs and components comply with the criteria in the USP-NF (if one exists for inactive components) and have a COA including specifications and test results showing the API or component meets expected quality. APIs and other components labeled "not for pharmaceutical use", "not for injectable use", "not for human use", or equivalent are not used in CSPs. [USP 7 Section 9.3.1]	Yes
API MANUFACTURERS: APIs are manufactured by an FDA-registered facility in the U.S. or comply with the laws and regulations of the applicable regulatory jurisdictions outside of the U.S. [USP 797 Section 9.3.1] *manufactured in china*	No
COMPONENT STORAGE: Components are handled and stored in a menner thet preventa contamination, mix-ups, and deterioretion and under temperature, humidity, and lighting conditions consistent with those indicated in official monographs or specified by the suppliers and/or manufacturers. [USP 797 Section 9.3.4]	Yes
STERILE, DEPYROGENATED SUPPLIES: Supplies in direct contact with CSPs are sterile and depyrogenated. A COA or similar conformance documentation is reviewed. [USP 797 Section 9.3.1] *no document available or reviewed by designated person at the time of inspection*	No
COMPONENT RECEIPT: Upon receipt, the external packaging of components is examined and components of unacceptable quality or showing deterioration are promptly labeled as rejected and segregated from active stock. APIs and components are inspected for a visible manufacturer expiration date. Components lacking expiration dates are assigned an expiration date no more than 1 year after receipt and both the date of receipt and facility assigned expiration date is clearly marked on the component packaging. [USP 797 Section 9.3.2]	Yes
STERILIZATION OF INJECTABLES WITHIN 6 HOURS OF COMPLETION: Injectable CSPs containing nonsterile components or that come into contact with nonsterile devices (e.g., conteiners, tubing) during compounding are sterilized within 6 hours of completion. [USP 797 Section 10] *CSP discarded if it comes into contact with non-sterile components.*	No

Q. STERILIZATION OF CSPs - CATEGORY 2 & 3

STERILIZING FILTERS: Sterilizing filters used are sterile, depyrogenated, have a nominal pore size of 0.22 µm or smaller, and are appropriate for pharmaceutical use. Sterilizing filters are certified by the manufacturer to retain at least 10,000,000 microorganisms of a strain of Brevundimonas diminuta per square centimeter of upstream filter surface area. Filters are chemically and physically compatible with all ingredients in the CSP (e.g., water-miscible alcohols may damage filter integrity); chemically stable at the pressure and temperature conditions that will be used; and have enough capacity to filter the required volumes. [USP 797 Section 10.2]	Yes
BUBBLE POINT TESTING: Sterilizing filters are subjected to the manufacturers' recommended integrity testing, such as a post-use bubble point test. If multiple filters are required for the compounding process, each of the filters passes a filter-integrity test. [USP 797 Section 10.2] For failed BP testing, CSP is discarded or, after investigating, refiltered not more than one time. [USP 797 Section 10.2]	Yes
CSP PREFILTRATION: When CSPs are known to contain excessive particulate matter, prefiltration is performed using a filter of larger nominal pore size (e.g., 1.2 µm) or a separate filter of larger nominal pore size placed upstream of (i.e., prior to) the sterilizing filter. [USP 797 Section 10.2] *refiltered CSP is done using 0.22micron filter. does not match SOP*	No
CSP TERMINAL STERILIZATION SOP includes: 1) A description of CSP terminal sterilization process(es), including the temperature, pressure (if applicable), duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization methods and equipment. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *No personnel log available at the time of inspection*	No
STEAM OR DRY HEAT STERILIZATION CYCLES FOR CSPs: Sterilization cycles allow for an exposure duration that includes sufficient time for the entire contents of the CSP to reach and remain at the sterilizing temperature during the duration of the sterilization period. CSPs sterilized vial steam are placed in the autoclave to allow steam to reach CSPs without entrapment of air. CSPs sterilized via dry heat are placed with sufficient space between materials to allow for hot air circulation. Sterilization cycle parameters (e.g., temperature, pressure, and duration) and load configuration(s) are documented. [USP 797 Section 10.3 & 10.4]	Yes
BIOLOGICAL INDICATOR USE: The effectiveness of steam or dry heat sterilization of CSPs is verified and documented for each sterilization run or load by using appropriate biological indicators (e.g., Geobacillus stearothermophilus for steam, Bacillus atrophaeus for dry heat) and other confirmation methods. [USP 797 Section 10.3]	Yes
STEAM & DRY HEAT CSP PREFILTRATION: Immediately before filling containers that will be sterilized via steam, or dry heat, CSP solutions are passed through a filter with a nominal pore size of not larger than 1.2 µm for removal of particulate matter. [USP 797 Section 10.3]	Yes
CALIBRATED DATA RECORDER: A calibrated data recorder or chart is used to monitor each steam or dry heat sterilization cycle and to examine for cycle irregularities (e.g., deviations in temperature or pressure). The calibrated oven is equipped with temperature controls and a timer. [USP 797 Section 10.3 & 10.4] *not available at the time of inspection*	No

R. STERILIZATION & DEPYROGENATION OF SUPPLIES & CONTAINER CLOSURE SYSTEMS - CATEGORY 2 & 3

STERILIZATION & DEPYROGENATION SOP's include: 1) A description of sterilization and depyrogenation process(es) used to sterilize and/or depyrogenated compounding supplies and container closure systems, including the temperature, duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization and depyrogenation methods and equipment used by the facility. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *SOP does not include personnel training or competency at the time of inspection*	No
DEPYROGENATION VIA DRY HEAT: Dry heat depyrogenation is used to render glassware, metal, and other thermostable containers and components pyrogen free. The exposure period includes sufficient time for items to reach the depyrogenation temperature; items remain at the depyrogenation temperature for the duration of the depyrogenation period. [USP 797 Section 10.1 & USP 1228.4]	Yes
DEPYROGENERATION VIA RINSING: Non-thermostable items are sterilized via a validated sterilization method and cycle: these items are also depyrogenated by multiple rinses with sterile, nonpyrogenic water (e.g., Sterile Water for Injection or Sterile Water for Irrigation) and then thoroughly drained or dried immediately before use in compounding. [USP 797 Section 10 & 10.1]	N/A
DEPYROGENATION PROCESS VALIDATION: The effectiveness of the dry heat depyrogenation cycle(s) is established initially and verified annually using Endotoxin Challenge Vials (ECVs) to demonstrate the cycle achieves a greater than or equal to 3-log endotoxin reduction. The effectiveness of the depyrogenation cycle is re-established if there are changes to the cycle parameters . Cycle verifications are documented. [USP 797 Section 10.1]	Yes
STERILIZATION CYCLE VALIDATION: When performed onsite, the efficacy of sterilization cycles used for supplies or container closure systems are established and documented. Each sterilization run or load is verified and documented by using appropriate biological indicators (e.g., spores of Geobacillus stearothermophilus) and other confirmation methods. [USP 797 Section 9.3.1 & USP 1229] *no report available at the time of inspection*	No

S. MASTER FORMULATION AND COMPOUNDING RECORDS – ALL CATEGORIES

MASTER FORMULATION RECORD (MFR): A MFR is created for all CSPs prepared from nonsterile ingredient(s) or CSPs prepared for more than one patient and any changes or alterations to an MFR are approved and documented per facility's SOPs. [USP 797 Section 11.1]	Yes
MFR DOCUMENTATION: An MFR includes at least the following: 1) Name, strength or activity, and dosage form of the CSP; 2) Identities, amounts of all ingredients, and, if applicable, relevant characteristics of components; 3) Type and size of container closure system(s); 4) Complete instructions for preparing the CSP including equipment, supplies, a description of the compounding steps, and any special precautions; 5) Physical description of the of the final CSP; 6) BUD and storage requirements; 6) Stability reference; 7) Quality control procedures; 8) other information as needed to describe the compounding process and ensure repeatability. [USP 797 Section 11.1 (Box 9)]	Yes
COMPOUNDING RECORD (CR): A CR is created for all Category 1, Category 2, and Category 3 CSPs. A CR is created for immediate-use CSPs prepared for more than one patient. A CR includes at least the following: 1) Name, strength or activity, and dosage form of the CSP; 2) Date and time of preparation of the CSP; 3) Assigned internal identification number (e.g., prescription, order, or lot number); 4) A method to identify the individuals involved in the compounding process and individuals verifying the final CSP; 5) Name of each component; 6) Vendor, lot number, and expiration date for each component for CSPs prepared for more than one patient and for CSPs prepared from nonsterile ingredient(s); 7) Weight or volume of each component; 8) Strength or activity of each component; 9) Total quantity compounded; 10) Final yield; 11) Assigned BUD and storage requirements; 12) Results of QC procedures. And, if applicable, 13) MFR reference for the CSP; and 14) Calculations made to determine and verify quantities and/or concentrations of components. [USP 797 Section 11.2]	N/A
STERILIZATION CYCLE DOCUMENTATION: The date, run, and load numbers of the steam or dry heat sterilizer used to sterilize a CSP are documented on the CR if applicable. [USP 797 Sections 10.3 & 10.4]	N/A

T. RELEASE INSPECTION AND TESTING – ALL CATEGORIES

RELEASE TESTING PROCEDURES: All release testing procedures (e.g., visual inspections and testing) are included in facility documentation such as MFRs and SOPs. [USP 797 Section 12]	Yes
VISUAL INSPECTION: CSPs are visuelly inspected before release and dispensing to determine whether the 1) physical appearance of the CSP is as expected (e.g., free of inappropriate visible particulates or other foreign matter, discoloration, or other defects), 2) container closure integrity is intact (e.g., checking for leakage, cracks in the container, or improper seals), 3) CSP and its labeling metch the prescription or medication order. [USP 797 Section 12.1]	Yes
DELAYED DISPENSING VISUAL INSPECTION: When CSPs are not released or dispensed on the day of preparation, a visual inspection is conducted immediately before its release to ensure the CSP is free from any defects such as precipitation, cloudiness, or leakage, which could develop during storage. [USP 797 Section 12.1]	Yes
CSP REJECTION & QUARANTINE: CSPs found to be of unacceptable quality (e.g., observed defects) are promptly rejected, clearly labeled as rejected, and segregated from active stock. [USP 797 Section 12.1] *products not meeting standards are sent back into cleanroom and filtered again. If CSP does not pass inspection the second time it is discarded. No separation of stock or labeling "rejected".*	No
INVESTIGATION OF OOS RESULTS: Out-of-specifications results and defects indicating sterility or stability problems are investigeted to determine the root cause and a corrective action plan is implemented and documented per facility SOPs. [USP 797 Section 12 & 12.1]	Yes

U. CSP HANDLING, STORAGE, PACKAGING, SHIPPING, & TRANSPORT – ALL CATEGORIES

STORAGE AREA TEMPERATURE MONITORING: Temperature in CSP & component storage areas is monitored at least once deily and recorded on a log on days when the facility is open or by a continuous temperature recording device; temperature data is readily retrievable. Monitoring equipment is calibrated or verified for accuracy as recommended by the manufacturer or every 12 months. When CSPs have been exposed to temperature excursions above or below storage temperature limits for the CSP, a Designated Person determines whether the CSP has retained its integrity or quelity. [USP 797 Sections 9.3 & 19.1]	No
CSP PACKAGING: CSP packaging and shipping materials are selected to protect CSPs from damage, leakage, contamination, degradation, adsorption and prevent inadvertent exposure to transport personnel. [USP 797 Section 19.2]	Yes
SHIPPING & TRANSPORTING: Modes of transport are selected that are expected to deliver properly packaged CSPs in an undamaged, sterile, and stable condition. Special handing instructions are provided and/or affixed to the exterior of the container when applicable. [USP 797 Section 19.2]	Yes

V. STERILE QUALITY PROGRAM, SDP's & DOCUMENTATION- ALL CATEGORIES

QA/QC PROGRAM & SOPs: A Quality Assurance (QA) and Quality Control (QC) program is documented in facility SOPs and formally establishes a system of 1) adherence to procedures, 2) prevention and detection of errors and other quality problems, 3) evaluation of complaints and adverse events, and 4) appropriate investigations and corrective actions. The QA/QC SOPs describe the roles, duties, and training of personnel responsible for each aspect of the QA program. [USP 797 Section 18]	Yes
INVESTIGATIONS & CAPAs: A designated person(s) follows up to ensure investigations are conducted and corrective actions are taken if problems, deviations, failures, or errors are identified or when complaints or adverse reactions are reported. A complete record of each reported complaint and adverse reaction is created and retained. Investigations and corrective actions are documented. [USP 797 Sections 17, 18.2, & 18.3]	Yes

ADR & COMPLAINT DOCUMENTATION: A complete record of each reported complaint and adverse reaction is created and retained per USP 797. [USP 797 Section 18.1] *no record available at the time of inspection*	No
RECALL PROCEDURES & SOP: If CSPs are dispensed or administered before the results of release testing are known, procedures are in place to immediately notify the prescriber of a failure of specifications with a potential to cause patients harm; determine the severity of the problem and urgency for implementation/completion of recall; identify patients (or other points of distribution) who have received affected CSP; recall any unused dispensed CSPs; quarantine remaining stock in the pharmacy; investigate if other lots are affected and recalled if needed; conduct investigation and document reason for the failure. Recalls are reported to the appropriate regulatory body as required by the laws and regulations of the applicable regulatory jurisdiction. [USP 797 Section 18]	Yes
ANNUAL SOP & QA/QC COMPLIANCE REVIEW: Facility sterile compounding SOPs are reviewed every 12 months by the Designated Person(s); the review is documented. Changes to SOP are made only by the Designated Person and documented. Acknowledgement of revisions to SOP's are communicated to all personnel. The overall QA/QC Program is reviewed at least once every 12 months by the Designated Person(s); the review is documented, and corrective actions are taken if needed. [USP 797 Section 17 & 18]	Yes

W. HAZARDOUS DRUG HANDLING & COMPOUNDING – ALL CATEGORIES

DESIGNATED PERSON: The entity has a Designated Person who is qualified and trained to be responsible for implementing appropriate HD procedures, overseeing compliance with USP 800 requirements, ensuring environmental control of the storage and compounding areas, monitoring HD facility operations, testing, and acting on results. [USP 800 Section 4]	
HAZARD COMMUNICATION PROGRAM (HCP): Facility has SOPs to ensure effective training regarding proper labeling, transport, storage, and disposal of HDs and use of Safety Data Sheets. The HCP and HD SOPs include a written plan describing 1) how USP 800 requirements are implemented, 2) HD chemical container labeling with the identity of the material and appropriate hazard warnings, 3) readily accessible location of HD chemical SDSs known and accessible by all personnel, 4) HD risk training and information provided to all personnel with HD exposure risk before initial HD handling work assignment and whenever hazard changes, 5) personnel of reproductive capability written acknowledgement of understanding of HD handling risks. [USP 800 Section 8]	
LIST OF HAZARDOUS DRUGS & ASSESSMENT OF RISK: Facility maintains a list of HDs that includes any items on the current NIOSH that the entity handles. The list is reviewed every 12 months and whenever a new agent or dosage form is used. All HD drugs follow the requirements of USP 800 unless an assessment of risk (AOR) is performed. If an assessment of risk approach is taken, the entity must documents what alternative containment strategies and/or work practices are being employed for specific dosage forms to minimize occupational exposure. The AOR minimally contains the type of HD, dosage form, risk of exposure, packaging, and manipulation considerations. The HD drug list & AOR is reviewed at least every 12 months and whenever a new agent or dosage form is used. [USP 800 Section 2]	
CONTAINMENT REQUIREMENTS: All antineoplastic HDs requiring manipulation and HD active pharmaceutical ingredients (APIs) on the NIOSH list follow all the requirements of USP 800. [USP 800 Section 2, Box 1]	
HD HANDLING, RECEIPT & STORAGE SOPs: SOPs are created and followed for the safe handling of HDs used by the facility. [USP 800 Section 17]	
HD HANDLING AREAS, SIGNAGE, & ACCESS: Signage designating HD handling areas are prominently displayed and access to HD handling areas is restricted to authorized personnel. Designated areas are available for receipt, unpacking, storage, and sterile compounding of HDs. [USP 800 Section 5]	
HD STORAGE: HDs are stored to prevent spillage or breakage, off floors, and in areas appropriate for natural disasters. Antineoplastic HDs and HD API are stored separately from non-HDs to prevent contamination and personnel exposure. HD storage areas are externally ventilated and negative-pressure rooms with at least 12 ACPH. Refrigerated antineoplastic HDs are stored in a dedicated refrigerator, in a negative pressure area with at least 12 ACPH. Pass through refrigerators are not used. [USP 800 Section 5.2]	
STERILE HDs COMPOUNDED IN A C-SCA: C-SCA maintains a minimum of 12 ACPH of HEPA- filtered air and has negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800, sections 5.3.2 Table 3]	
C-SEC DESIGN AND ENGINEERING CONTROLS: The C-SEC has fixed walls physically separated from other preparation areas, is externally ventilated has 30 ACPH, and negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800 Section 5.3.2 Table 3]	
C-SEC ACCESS: The Ante Room used for entry into the negative pressure buffer room has fixed walls and maintains a minimum of 30 ACPH of HEPA-filtered air, positive pressure of +0.02" w.c. to all adjacent unclassified areas, and ISO7 or better classification. Alternatively, a negative-pressure HD buffer entered exclusively through a positive pressure non-HD buffer room contains a line of demarcation (LOD) within the negative-pressure buffer room for donning/doffing HD PPE and a method a transport of HDs, HD CSPs, and HD waste into and out of the HD buffer (e.g., pass-through chamber). Pass through chambers are included in semi-annual facility certification. [USP 800 Section 5.3.2]	
C-SEC SINK & SAFETY EQUIPMENT: A sink is available for hand washing and an eyewash station and/or other emergency safety precautions meeting applicable laws and regulations are readily available and located where operation does not interfere with ISO classifications. Sinks are located at least 1 meter from the entrance into the buffer room (or at least 1 meter from the C-PEC in a C-SCA). [USP 800 Sections 5.3 & 5.3.2]	
C-PEC LOCATION, VENTING, & OPERATION: All C-PECs used for sterile HD compounding (e.g., CACIs or BSCs), are located within a C-SEC or C-SCA, externally vented, and maintain an ISO 5 or better air quality. C-PECs operate continuously if supplying some or all the negative pressure in the C-SEC or if used for sterile compounding. During power outages, repairs, or relocation, C-PEC use is suspended immediately. Once C-PEC power is restored, all PEC surfaces are decontaminated, cleaned, and disinfected, and compounding is not resumed until the manufacturer's specified recovery time has elapsed. [USP 800 Section 5.3.2]	
REQUIRED HD PPE: When compounding HDs, gowns, head, hair, shoe covers, and two pairs of chemotherapy gloves are donned per facility SOPs. Chemotherapy gloves are tested to ASTM standard D6978 (or its successor) and are powder free and two pair of chemotherapy gloves are donned per SOP. Gloves are inspected for physical defects. Gloves are changed when torn, punctured, or contaminated. Personnel wash hands with soap and water after removing gloves. HD gowns are disposable, resistant to permeability by HDs, close in back, are long sleeved, closed cuff, and seamless. Gowns are changed per manufacturer's permeation information; if no data is available, HD gowns are change every 2-3 hours or immediately after a spill or splash. Gowns are limited to HD handling areas and are donned over the sterile compounding garment. When compounding, a second pair of shoe covers is donned before entering the C-SEC and doffed when exiting the C-SEC. HD PPE is disposed of appropriately prior to exiting the C-SEC. Chemotherapy gloves and sleeve covers (if used during compounding) are carefully removed and discarded immediately into an appropriate waste container inside of the C-PEC or contained in a sealable bag for discarding outside of the C-PEC. Reusable PPE is decontaminated and cleaned after each use. [USP 800 Section 7]	
EYE AND FACE PROTECTION: Appropriate eye (goggles) and face protection (face shield) are worn when there is a risk for spills or splashes or when working outside of a C-PEC. Surgical masks are not used when respiratory protection is required per SOP and/or AOR as protection from HD exposure. [USP 800 Section 7.4]	
HD TRAINING & COMPETENCY ASSESSMENT: Personnel who handle HDs are trained and demonstrate competency initially before independently handling HDs, annually, and when a new HD medication, process, SOP, or equipment is introduced. Training minimally includes an overview of the entity's HD list and their risks; review of HD SOPs; proper use of PPE, equipment, and devices; prevention of HD exposures and spills; HD exposure and spill response; use of a spill kit, PPE, and NIOSH-certified respirators; and HD disposal. Based on job duties, personnel receive additional HD training in HD acquisition and receipt, preparation, compounding, dispensing, labeling, storage, and transport. Training and competency assessments are documented. [USP 800 Sections 8, 9, 11.1, 16, & 17]	
HD ATTESTATION: Personnel of reproductive capability have a written acknowledgement attesting to their understanding of HD handling risks. [USP 800 Section 8]	
DEDICATED HD EQUIPMENT: Disposable or cleanable equipment for compounding (e.g., mortar and pestle, graduated cylinder, spatulas) is dedicated for use with HDs. [USP 800 Section 13]	

NON-HD COMPOUNDING IN A C-PEC: Non-HDs compounded in a HD C-PEC are placed in protective outer wrapping, labeled for PPE handling precautions, and treated as an HD. The C-PEC worksurface is decontaminated between compounding of different HDs. [USP 800 Section 5.3.2 and Table 3]	
DEACTIVATION, DECONTAMINATION, CLEANING & DISINFECTION (D/D/C/D): Areas where HDs are handled and all reusable equipment and devices are deactivated/decontaminated, and cleaned. Sterile compounding areas and devices are subsequently disinfected. Written procedures for decontamination, deactivation, cleaning, and disinfection are available and followed. Procedures include agents used, dilutions (if used), frequency, and documentation requirements. Agents selected are appropriate for the type of HD contamination(s), location, and surface materials. Sterile 70% IPA is used to remove residue left on sterile surfaces and compounding areas by decontaminating agents. [USP 800 Section 15]	
D/D/C/D TRAINING & PPE REQUIREMENTS: Personnel are trained in deactivation/decontamination, cleaning, and disinfection to protect themselves and the environment from contamination. Personnel wear appropriate PPE resistant to cleaning agents used, including 2 pairs of ASTM-tested chemotherapy gloves and impermeable disposable gowns. Eye protection and face shields are worn if splashing may occur. [USP 800 Section 15]	
C-PEC D/D/C/D: C-PEC is decontaminated at least daily (when used), after as spill, before and after certification, voluntary interruption, or if ventilation tool is removed. The C-PEC worksurface is decontaminated between compounding of different HDs. The area under the work tray of a C-PEC is deactivated, decontaminated, and cleaned at least monthly. [USP 800 Section 15.2]	
HD LABELING, PACKAGING, TRANSPORT & SPILLS HANDLING: Facility follows SOP for the labeling, handling, packaging, and transport of HDs which addresses the prevention of spills/exposures, training for exposure, and spill handling. HD CSPs are identified as hazardous and labeled with special handling precautions. Labeling process for compounded HD products does not introduce contaminated materials into non-HD areas. [USP 800 Section 11 & 11.2]	
SPILL KITS, & SINGAGE: Spill kits are readily available with appropriate supplies, PPE, and signs to restrict access to affected areas. restriction posted, and documentation of spills occur when needed. [USP 800 Section 16]	

X. LYOPHILIZATION

Sterile preparations prepared for lyophilization are maintained in ISO 5 unidirectional laminar flow air throughout sterilization, filling, and transport to the lyophilizer. [64B16-27.797(5) F.A.C.]	
A recorded smoke study is available and demonstrates that transport from the PEC to the lyophilizer is accomplished in ISO 5 laminar flow air at all times. [64B16-27.797(5) F.A.C.]	
The pharmacy has established and follows policies and procedures for the high-level disinfection of the lyophilizer chamber, piping, and all other areas of the unit which pose a potential risk for contamination of the product. [64B16-27.797(5) F.A.C.]	
The pharmacy validated the high-level disinfection procedure initially, and after changes to the cleaning process or agents. Documentation of studies is available for inspection. [64B16-27.797(5) F.A.C.]	
Validation studies for high level disinfection are performed with the 5-aerobic bacterial and fungal ATCC organisms referenced in USP<71> are conducted by an external vendor unless the firm has an internal laboratory capable of performing the studies. An internal laboratory is separate from the compounding and work areas of the pharmacy to prevent contamination in the pharmacy. [64B16-27.797(5) F.A.C.]	
Policies and procedures are established and followed for cleaning the lyophilizer prior to disinfection and include cleaning agents and schedules. Documentation of cleaning is maintained and available for inspection. [64B16-27.797(5) F.A.C.]	
Policies and procedures are established for the maintenance of the lyophilizer and at a minimum include the manufacturers recommendations. [64B16-27.797(5) F.A.C.]	
The maintenance schedule includes provisions for periodic testing of the chamber for leaks and all other recommended procedures described by the equipment manufacturer. Documentation of routine maintenance is available for inspection. [64B16-27.797(5) F.A.C.]	
SOPs and quality assurance program established to include validation of the filling process, container closure integrity, frequent monitoring of fill volumes, identification of over fills and underfills, assessment of personnel involved in compounding for lyophilization, equipment qualification, formula verification, and evaluation of finished product for conformance to specifications. [64B16-27.797(5) F.A.C.]	
The pharmacy has provisions for sterilizing, with filters, the inert gas or air used for backfilling during the vacuum release phase. These Sterilizing filters undergo the manufacturers recommended integrity test. [64B16-27.797(5) F.A.C.]	
Media fills are conducted every six months using the maximum batch size and demonstrate the filling, transport to the lyophilizer, loading and stoppering operations. Media is NOT frozen during the media fill operation. [64B16-27.797(5) F.A.C.]	
Personnel preparing sterile compounds for lyophilization wear sterile Personal Protective Equipment that covers all exposed skin. [64B16- 27.797(5) F.A.C.]	
Glove Fingertip Sampling is performed with every batch after fill and transport into the lyophilizer on all personnel compounding for lyophilization. The results are incorporated into the batch record. [64B16-27.797(5) F.A.C.]	
In-process acceptance criteria such as color, moisture limits and visual appearance are established for each lyophilized product. [64B16- 27.797(5) F.A.C.]	
A 100% visual examination of the finished product is conducted to determine that the product conforms to the established visual criteria and is incorporated into the batch record. [64B16-27.797(5) F.A.C.]	
Finished product testing is conducted on all batches. Procedures have been established for selecting test samples from the batch and are written and followed. Such procedures may include location of vials in the lyophilizer and positions in the fill line. [64B16-27.797(5) F.A.C.]	
Finished product testing includes sterility testing using a USP<71> method unless an alternative test method has been validated and shown to be equivalent or better. Diluents used to reconstitute the sample vials for testing are preservative free. [64B16-27.797(5) F.A.C.]	
Each batch of lyophilized product with a beyond use date that falls within the USP<797> guidelines and is not tested for sterility, has vieble air and surface sampling that is collected in critical areas of ISO 5 locations as well as sampling of the gloves and sleeves of personnel documented in the batch record. [64B16-27.797(5) F.A.C.]	
Every lyophilized product has established endotoxin levels Each batch of lyophilized product is tested for endotoxin in accordance with USP<85> and confirmed to fall within the set limits and documented in the batch record. [64B16-27.797(5) F.A.C.]	
Potency, radiochemical purity, or applicable test to assure label claim is conducted on every batch and documented in the batch record. In lieu of potency testing, weight-based verification may occur based on formula verification. Potency testing shall be based on the USP monograph if one is available. [64B16-27.797(5) F.A.C.]	

Y. SPECIAL PARENTERAL ENTERAL & EXTENDED SCOPE

Technicians properly identified. [64B16-27.100 (2) F.A.C.]; [64B16-27.4001 F.A.C.]; [64B16-27.410 F.A.C.]; [64B16- 27.420 F.A.C.].	
Medication is properly labeled for dispensing to patient. [64B16-28.108(2) F.A.C.]	
Outdated medications removed from active stock. [64B16-28.110 F.A.C.]; [64B16-28.1191 F.A.C.]	

Continuous Quality Improvement Program described in the Pharmacy policy and procedure manual and quarterly summarization of Quality Related Events are available for inspection. [64B 16 27.300 F.A.C.]; [766.101 (1) (a)(i) F.S.]	
Pharmacy maintains patient profile with allergy information and medications dispensed. [64B16-27.800, F.A.C.]	
All controlled substance prescriptions (electronic, faxed, verbal and written) contain required information. [893.04(a)(b)(c) F.S.]; [21CFR1306.05]	
Prescriptions for controlled substances are on counterfeit-proof prescription pads or blanks purchased from a department-approved vendor and the quantity and date meet the requirements of [456.42(2), F.S.].	
Controlled substance inventory taken on a biennial basis and available for inspection. [893.07(1)(a), F.S.] [21CFR1304.11] [21CFR1304.04]	
DEA 222 forms properly completed or records of CSOS orders electronically completed, linked to the original order, archived and retrievable. [893.07(2) F.S.]; 21CFR 1305.13(e)]; [21CFR1305.22(g)]	
Controlled substance records and prescription information in computer system are retrievable and maintained for 4 years. [21CFR1304.04]; [465.022(12) (a) F.S.]; [21CFR1306.22]; [64B16-28.140 F.A.C.]	
Certified daily log or signed printout maintained. [21CFR1306.22(f)(3)]; [64B16-28.140(3)(d) F.A.C]	
Pharmacy is reporting to the PDMP within 24 hours of dispensing controlled substance. [893.055(4) (3)(a), F.S.]	
Invoices for medications purchased from a Florida licensed wholesaler/distributor are retrievable for inspection. [499.005 (14) F.S.]	
A special sterile products and parenteral/enteral compounding pharmacy provides telephone accessibility to its pharmacist(s) for its patients at all hours. [64B16-28.820(3)(b)]	
A special sterile products and parenteral/enteral compounding pharmacy provides special handling and packaging of compounded parenteral and enteral preparations when delivering from the pharmacy to the patient or institution as required to maintain stability of the preparations. [64B16-28.820(3)(b)]	

Z. Miscellaneous

BLOOD-DERIVED OR BIOLOGICAL MATERIAL MANIPULATIONS: Compounding activities that require the manipulation of a patient's blood-derived or other biological material (e.g., autologous serum), are clearly separated from other compounding activities and equipment used in CSP preparation activities and controlled by specific SOPs to avoid cross-contamination. [USP 797 Section 1.1.2]	
ALLERGENIC EXTRACTS: Licensed allergenic extracts are mixed and diluted to prepare prescription sets for administration to patients. A prescriptions set is a vial or set or vials of premixed licensed allergenic extracts for subcutaneous immunotherapy that have been diluted with an appropriate diluent for an individual patient. Compounding allergenic extracts 1) minimally complies with all aspects of USP <797> Section 21; 2) involves transfer via sterile needles and syringes of conventionally manufactured sterile allergen products and appropriate conventionally manufactured sterile added substances; and 3) manipulations are limited to penetrating stoppers on vials with sterile needles and syringes and transferring sterile liquids in sterile syringes to sterile vials. If these conditions are not met, compounding of allergenic extracts follows all aspects of USP <797>. [USP 797 Sections 1.1.2 and 21]	

Corrective Action Plan

A corrective action plan is required to be submitted within 30 days for the non-compliant items listed above. [64B16-27.797(5), F.A.C.]	

Remarks:

I have read and have had this inspection report and the laws and regulations concerned herein explained, and do affirm that the information given herein is true and correct to the best of my knowledge.

Sterile Compounding Questionnaire

Rev (09/11/2024)

This application cannot be returned by fax or email.
We must have an original signature to process.

Approval of this completed questionnaire is required for an existing pharmacy, new pharmacy and/or out-sourcing facility applicant who wish to engage in preparing, compounding, dispensing, and furnishing sterile compounded products to Nevada patients or consumers.

Please provide a thorough response to the questions below and provide any necessary supporting documents.
-For a new pharmacy or out-sourcing facility applicant, submit this completed form with your application.
-For an existing pharmacy, send the completed form to the address indicated above.

Section 1: General Information

Pharmacy Name: RxCompoundStore.com

NV Pharmacy or Outsourcing facility license # (if applicable): PH04469

Physical Address: 8950 SW 74th Ct Ste 101

City: Miami State: FL Zip: 33156

Mailing Address (if different from physical address): _____

City: _____ State: _____ Zip: _____

Telephone: 786-803-8947 Toll Free # (NAC 639.708, NRS 639.23286): 833-792-6673

Fax: 844-875-0009 Contact Email: shibu.john@rxcs.net

Website: https://rxcompoundstore.com/

Nevada Business License # (if applicable) _____

Supervising/Managing Pharmacist Name (NRS 639.220): Shibu John

Supervising/Managing Pharmacist NV Pharmacist Registration #: 14862

Name of Designated Person(s) as defined by revised USP-797 guidelines: Shibu John

Email of Designated Person(s): shibu.john@rxcs.net

Telephone of Designated Person(s): 448-230-2986

Section 2: Sterile Compounding Questions (Use a separate piece of paper if additional space is needed.)

1. What risk level sterile compounding will your facility be performing (check all that apply)?

☐ Category 1 ☐ Category 2 ■ Category 3

If you marked **"Category 3"**, you must also complete **section 4.**

2. If compounding Category 2 products is the location performing sterility and endotoxin testing (if required) to obtain extended beyond-use dates? | Yes ☐ No

3. If compounding Category 2 products is the location performing aseptically processed CSPs or terminally sterilized CSPs? ☐ Aseptic ☐ Terminal

4. Is the pharmacy following the new garbing requirements listed in the revised USP-797 guidelines? ■ Yes ☐ No

5. When was the most recent certification for the ISO classified areas? June 2025

6. What is the frequency of the recertification for the ISO classified areas? Every 6 months

7. Were there any follow-up items required from the most recent certification report? ☐ Yes ■ No

8. If preparing Category 2 or Category 3 CSPs from non-sterile starting components are the pre-sterilization procedures such as weighing and mixing completed in an ISO Class 8 or better environment? ■ Yes ☐ No

9. If compounding Category 1 CSPs and Category 2 CSPs how often is surface sampling of all classified areas and pass-through chambers conducted? _____

10. Will you be performing sterile hazardous drug compounding? Yes ■ No

If you marked **"Yes"**, you must also complete **section 3.**

11. List the sterile compounded products that you will be compounding for Nevada patients or consumers:

1. Semaglutide
2. Tirzepatide
3. Tirzepatide/Pyridoxine
4. Tirzepatide/Methylcobalamin
5. Ascorbic acid
6. Glutathione
7. Methylcobalamin
8. Methionine/Inositol/Choline Chloride/Cyanocobalamin
9. Monomix (Alprostadil)
10. Trimix (Papaverine/Phentolamine/Alprostadil)
11. NAD+
12. Tesomorelin

12. What laboratory performs your sterility or endotoxin testing?

Name: Pharmetric Lab

Address: 7265 Ulmerton Rd.

City: Largo State: FL Zip: 33716

Telephone: 727-209-5778

13. What is your procedure for visual inspection of compounded sterile products?
Upon completion of compounding and prior to releasing and dispensing, the CSPs must undergo a visual inspection by pharmacists to ensure their physical appearance meets expectations. The visual characteristics to be observed include appearance, cleanliness, color, viscosity, particulates, discoloration, uniformity, clarity, turbidity, precipitate, leaks, cracks in the container, improper seals, and other defects. The CSP label must aslo visually inspected to ensure that the CSP and its labeling match the prescription or medication order.

14. How often do you perform glove fingertip and medial fill testing?
Every 3 months for compounding personnel, and annually for designated supervisors.

15. Describe your initial and ongoing training program for all personnel performing sterile compounding:
All personnel involved in sterile compounding and designated individuals are required to complete an initial and annual training program. This training also includes, but is not limited to, reading the required department SOPs, USP Chapter 797, and understanding CoAs and SDSs.

16. Describe the cleaning procedure for your primary and secondary engineering controls, including the frequency of cleaning and the names of cleaning, disinfectant, sporicidal, and/or deactivation and decontamination agents used:
Please see the attached document: Cleanroom Suite Cleaning and Maintenance Outline.

17. Who performs the sterile compounding process at your facility?

Pharmacy technician: Dayli Caballero, Giselle Canas, Elianny Gonzalez

18. Who is responsible and accountable for the sterile compounding process at your facility?
Pharmacist Hong-Chun Yeh.

19. If products are shipped/mailed, what shipping conditions are used to ensure product safety/efficacy?
Insulated Foam Shipping Kits or Metallic Insulated Mailers with multiple ice packs were used to ensure the safety and efficacy of products. All packages are shipped overnight, Monday through Thursday, via third-party carriers.

Section 3: Sterile Hazardous Compounding Questions (Complete this section ONLY if you be performing Sterile Hazardous Compounding.)		
1. What type of primary engineering controls will you be using in your facility?		
2. Are you complying with all USP 800 guidelines?	Yes	No
3. Have your employees who compound with hazardous drugs signed an acknowledgement that they understand the risks associated with this process?	Yes	No
4. Is your BSC or CACI vented 100% to the outside?	Yes	No
5. Do you have a negative pressure buffer room at your facility?	Yes	No
6. Will you be compounding with antineoplastic HDs or HD API?	Yes	No
7. If yes, are the drugs stored in an externally ventilated, negative pressure room?	Yes	No
8. Will you be utilizing a closed system transfer device?	Yes	No
9. If yes, list the name of the device:		

10. What information is provided to the patient or consumer on the proper handling and disposal of hazardous drugs products/containers?

11. Describe your initial process for training new employees prior to compounding sterile hazardous drugs?

Section 4: Sterile Category 3 Compounding Questions (Complete this section ONLY if you will be performing Category 3 Compounding.)

1. List the specific Category 3 sterile products that your facility compounds:

1. Semaglutide
2. Tirzepatide
3. Tirzepatide/Pyridoxine
4. Tirzepatide/Methylcobalamin
5. Ascorbic acid
6. Glutathione
7. Methylcobalamin
8. Methionine/Inositol/Choline Chloride/Cyanocobalamin
9. Monomix (Alprostadil)
10. Trimix (Papaverine/Phentolamine/Alprostadil)
11. NAD+
12. Tesomorelin

2. What is the frequency for ongoing garbing, gloved fingertip and thumb sampling, and media fill testing for compounding personnel?

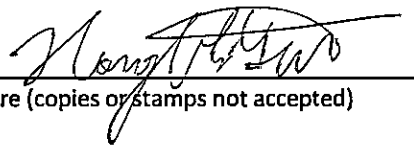
Every 3 months for compounding personnel, and annually for designated supervisors.

3. Is the pharmacy meeting all of the additional garbing requirements for compounding Category 3 CSPs as defined by the revised USP-797 guidelines? ■ Yes No

4. What is the frequency for completing volumetric active air sampling?

Every 30 days

5. What is the frequency for completing surface sampling? Every week		
6. What is the frequency for using sporicidal agents? Weekly for PECs and equipment inside the PECs, pass-through chamber, work surfaces outside the PEC, floors. Monthly for walls, doors, door frames, ceilings, storage shelving and bins, and equipments outside of the PECs.		
7. Is an endotoxin test performed for all products compounded from one or more nonsterile component?	■ Yes	No
8. Is the BUD assigned supported by stability data obtained using a stability-indicating analytical method?	■ Yes	No



I certify under penalty of perjury that the information contained in this form is accurate, true and complete in all material respects. I understand that making any false representation in this form is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire form and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event the form is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

MIAMI, FL 33156

Equipment Name	Manufacturer	Model	Serial	Calibration Due Date
VIABLE SAMPLER	PBI	SAS DUO 360	08-DC-06375	02 JAN 26

All testing is performed by qualified personnel using instrumentation, procedures and methods which ensure measurements observed are reliable. When specified, testing is performed in accordance with current ISO-17025, ISO-14644, USP-<797> and ENV's Quality Manual. Specifications comply with One or More of the following; applicable IEST recommended practices, CETA CAG-009, Manufacturer Recommendations, and/or customer determined specifications. Measurement instruments used are traceable to The National Institute of Standards and Technology (NIST). Results obtained apply to the specific room or equipment and are reflective of conditions at the time of this test.

Test equipment calibration certificates available upon request.
All viable sampling media plates and swabs supplied by ENV Services, Inc. contain neutralizing additives lecithin and polysorbate 80 per USP<797 > and USP < 825 > requirements.

USP<797> & USP<825> Supplemental Information

1. Growth Media
   - 1.1. Single-Plate Method
     - 1.1.1. The sample undergoes two incubations periods at times and temperatures to promote growth of baeteria and fungi.
       - 1.1.1.1. The sample is incubated inverted at 30°-35° for no less than 48 hours.
       - 1.1.1.2. The sample is examined for growth and results are recorded.
       - 1.1.1.3. Then the sample is incubated inverted at 20°-25° for no less than 5 additional days.
       - 1.1.1.4. The sample is again examined for growth and results are recorded.
   - 1.2. Dual-Plate Method
     - 1.2.1. Bacteria media device is incubated inverted at 30°-35° for no less than 48 hours.
     - 1.2.2. Fungal media device is incubated inverted at 20°-25° for no less than 5 days.

2. Viable Sampling Testing
   - 2.1. Air:
     - 2.1.1. Results are reported as CFU/m^3 of air.
   - 2.2. Surface:
     - 2.2.1. Results are reported as CFU per device.

3. Media-Filled Testing
   - 3.1. Media-filled vial or IV bag is incubated for 7 days at 20°-25° followed by 7 days at 30°-35°.

4. Gloved Fingertip and Thumb Testing
   - 4.1. The sampling device is incubated inverted at a temperature range of 30°-35°C for no less than 48 hours and then at 20°-25°C for no less than 5 additional days.
   - 4.2. Results are reported separately as number of CFU per hand (left hand, right hand).
   - 4.3. Results are also reported as the combined results for both the left hand and right hand.
     - 4.3.1. The combined results determine whether the CFU action level is exceeded.

5. Reporting Information
   - 5.1. The results found in this report are solely tied to the project above and the samples therein.
   - 5.2. Positive controls are unopened samples submitted for growth promotion testing (inoculation) which eliminates false negatives. Negative controls are unopened samples submitted for incubation solely which eliminates false positives.
   - 5.3. A positive-hole correction factor has been applied to all applicable air samples. The positive-hole correction factor accounts for the statistical possibility that multiple viable particles can pass through the same hole of an air sampler head. The positive hole correction factor is applied to the total plate colony count, therefore the sum of individual organism calculated counts may be reported as less than the total plate corrected count.
   - 5.4. MRL (minimum reporting limit) is 1cfu/device unless otherwise stated on comments table.
   - 5.5. "CFU TNTC" CFU exceeds countable limits of media device.
   - 5.6. "*" next to Sample ID, refer to sample comments table for details.
   - 5.7. Reported sampling date/time default to a blank date and time of 00:00 unless sampling date/time provided by client on the chain of custody.
   - 5.8. Growth will be reported to the Genus and species level if a high enough confidence score is reached through MALDI-TOF MS method. If the confidence score threshold results in Genus only, the organism will be reported to Genus level only. If neither option is available, the organism will be subcultured and the new growth will then go through the above process for additional attempts for identification. If the confidence score is still not high enough to report to Genus and species level or Genus only, then additional biochemical analysis is performed. If the test options have been exhausted and the analysis is inconclusive to report at minimum Genus level, then the growth will be reported as "Misc. Gram Positive bacteria" or "Misc. Gram Negative bacteria". Fungi that have not received high confidence score through MALDI-TOF MS method, will be identified to Genus level only using Culture and Morphological identification. This process may result in the general classification of "Non-Sporulating Colony" or "Yeast".

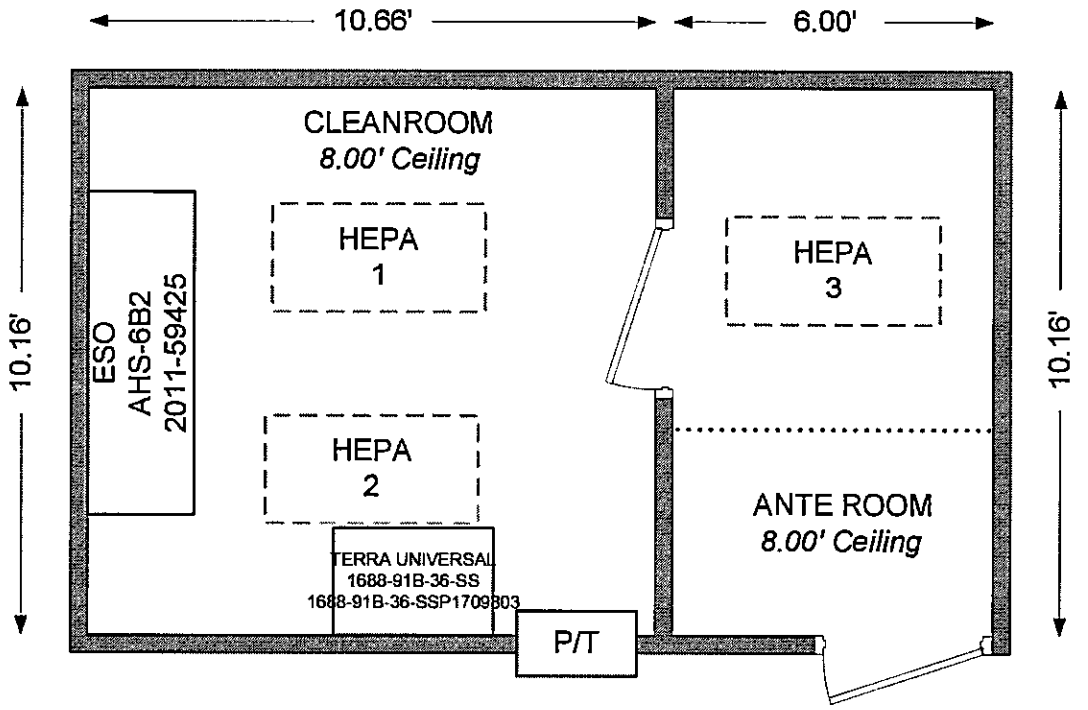
SUMMARY REPORT



CLEANROOM
RX COMPOUND STORE
MIAMI, FL 33156

All testing is performed by qualified personnel using instrumentation, procedures, and methods which ensure measurements observed are reliable. All Testing is performed in accordance with current versions of ISO-17025, ISO-14644, USP<797>, <USP800>, <USP825>, and ENV's Quality Manual. Specifications comply with applicable IEST recommended practices, Current versions of CETA CAG-003 for Sterile Compounding Facilities, CETA CAG-009 Viable Environmental Monitoring for Sterile Compounding Facilities, and/or customer determined specifications when applicable. Measurement instruments used are traceable to The National Institute of Standards and Technology (NIST). Results obtained apply to the specific room or equipment and are reflective of conditions at the time of this test.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	B. COMPONENT BUDs (Single and Multi-dose Containers) – ALL CATEGORIES

MULTIDOSE CONTAINERS (MDCs): Upon initially entering or puncturing a conventionally manufactured MDC, the MDC is not used for more than 28 days unless otherwise specified by the manufacturer on the labeling. [USP 797 Section 15.2] *BUD 3 months, no Exp date on multi-dose vial. No other BUD assigned*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The product was dispensed in a multi-dose container with a labeled BUD based on stability study supporting a BUD, leading to the assumption that the default 28-day limit per USP <797> Section 15.2 applies. Although a stability study supporting a 90-day BUD exists, this was not reflected on the container labeling. Additionally, a lack of clarity regarding the distinction between the manufacturer's expiration date and the compounding pharmacy–assigned Beyond-Use Date (BUD) contributed to the assumption that an expiration date was required on the CSP label. In accordance with USP <797> Section 13, only the BUD is required to be labeled on compounded sterile preparations.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Review and verify that the existing stability report is USP-compliant and product-specific to MFR, container-closure system, and storage conditions. The stability report is condected under stability-indicating analytical methods per USP<51>, <71>, <8S>, and <788> if applicable.

Review the definitions of Beyond-Use Date (BUD) and Expiration Date to ensure the appropriate date, as required by USP <797>, is accurately reflected on the CSP label.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PRDCEDURE CHANGE:

Establish a standardized review process to ensure all assigned BUDs are supported by validated stability data and appropriately documented prior to product release.

Conduct periodic audits of finished product labels to verify that BUDs are clearly indicated, justified, and in compliance with USP <797> requirements.

Maintain a centralized and accessible repository of validated stability studies and supporting documentation to ensure readiness for regulatory inspections and internal quality reviews.

Update relevant standard operating procedures (SOPs) to clearly define and differentiate expiration date and BUD, including specific guidance on labeling requirements for CSPs and multi-dose containers.

SOP REFERENCE

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	E. EQUIPMENT, SUPPLIES, & COMPONENTS – ALL CATEGORIES

EQUIPMENT SOPs: Written SOPs for the calibration, maintenance, cleaning, and use of equipment are established and are based on the manufacturer's recommendations. Procedures are followed and records are maintained. [USP 797 Section 9.1] *no SOP at time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The SOPs for equipment calibration, maintenance, cleaning, and use were in place; however, they were not readily located or presented during the inspection due to deficiencies in document control and accessibility protocols.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

We immediately retrieved and verified the existence of all required SOPs related to equipment calibration, maintenance, cleaning, and use. In addition, a full internal audit was conducted t to ensure all current SOPs are properly indexed, stored, and accessible in both digital and physical formats.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Implement a centralized SOP management system with clearly labeled categories and responsible personnel for easy and immediate retrieval.

Train all relevant staff on the updated SOP access procedure, including how to locate and provide SOPs during inspections.

Schedule audits of SOP documentation to verify accessibility, version control, and staff awareness.

Assign a designated compliance officer or SOP coordinator to oversee documentation readiness for future inspections.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	H. CERTIFICATION AND RECERTIFICATION – ALL CATEGORIES

MONITORING DEVICE CERTIFICATION: Temperature and humidity monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. [USP 797 Section 4.2] *No SOP or documentation available at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Lack of a written standard operating procedure (SOP) and oversight in maintaining documentation of verification activities led to the inability to produce records or guidance during inspection. The process existed informally but was not standardized or documented, resulting in noncompliance.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

SOP Development and Implementation:
A written SOP titled "Monitoring Device Certification" has been developed and approved as of 7/14/2025. This SOP outlines the procedures for initial setup and use of temperature and humidity monitoring devices, frequency of verification or calibration based on manufacturer recommendations (at least every 12 months), acceptable documentation practices for verification activities, including calibration certificates and maintenance logs.

Immediate Documentation:
All current devices in use were reviewed, and calibration/verification certificates have been retrieved or obtained from vendors. These records have been filed under equipment verification logs and are accessible in the designated compliance binder and SharePoint system.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Annual Review & Tracking System:
- A device verification tracking log has been implemented to monitor due dates for each monitoring device's verification.
- Reminders will be automatically flagged 30 days before each device's due date.

Staff Training:
- All responsible personnel have been trained on the new SOP and documentation requirements.
- Training records have been maintained and stored accordingly.

Internal Audit Inclusion:
- Monitoring device verification and documentation will be added to the quarterly internal audit checklist to ensure continuous compliance.

EFFECTIVENESS CHECK:

A review will be conducted 3 months post-implementation to confirm proper execution and documentation then annual review.

The existence of updated verification records
- Compliance with the new SOP
- Documentation accessibility during inspections

Audit Verification
- Internal Audit Inclusion:
- Monitoring device verification and documentation will be added to the quarterly internal audit checklist to ensure continuous compliance.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	H. CERTIFICATION AND RECERTIFICATION – ALL CATEGORIES

CERTIFICATION REPORT REVIEW BY DESIGNATED PERSON: All certification and recertification records are reviewed by the designated person(s). A corrective action plan is implemented and documented in response to any out-of-range results on certification report and data reviewed to confirm that the actions taken have been effective. [UPS 797 Section 5.0] *no document available at the time of inspection*

- ***The certification of dry heat oven and sterilizer were reviewed at the time of inspection .***
- ***The reuesst for the certification of air sampler and repeater pump was missing at the time of inspection.***

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The absence of documentation was due to a gap in the formal procedure requiring the designated person to review and sign off on certification and recertification reports. While reports were verbally acknowledged and acted upon, the reviews and associated corrective actions were not consistently recorded or maintained in an accessible, centralized location.
☐	Method	
☐	Manpower Training	
☐	Measurements	
☑	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

All certification and recertification reports from the past 12 months were retrospectively reviewed by the designated person.

A signed attestation for each reviewed report has been added to the facility's quality assurance documentation.

Any previously unaddressed out-of-specification findings were reassessed, and appropriate corrective actions were taken and documented.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

The responsibility of the designated person:
- Review all certification and recertification reports within 5 business days of receipt
- Sign and date each report
- Document any required corrective actions and verify their completion and effectiveness

Certification review forms/checklists are now included with each report to ensure completeness and traceability. In addition, all reports and associated documentation are now maintained in a centralized, access-controlled repository (physical or electronic).

Additional service-related notes: Please see footnote below regarding +/-2% interchangeability of heads and media types.

Bioscience International certifies that the above described instrument conforms to the original manufacturer's tolerances for the parameters listed (not applicable to As Found data) & has been calibrated in accordance with ISO 17025:2017 guidelines under accredited conditions (pursuant to Bioscience International's A2LA certificate 5699.01) using standards whose accuracies are traceable to the International System of Units (SIs) through the U.S. National Institute of Standards & Technology or International equivalent, have been verified with respect to instrumentation whose accuracy is traceable to NIST, or are derived from accepted values of physical constants. CMC test uncertainty is +/-2.2%. Instruments are calibrated with a test uncertainty ratio of 4:1 or greater whenever possible. In all cases, statistical methods are used to minimize uncertainty using the best commercially available methods. The decision rule used is Simple Acceptance as defined in ILAC G8 with a measurement uncertainty value that will never exceed 50% of the tolerance unless otherwise specified. Voltage readings are for preventative maintenance purposes & not part of the calibration; values other than voltage, temperature, pressure, & air velocity are calculated values. All sampling heads may be used interchangeably with +/-2% equivalence as long as they have the same hole count/size and are kept clean/free of obstructions. Calibration results relate only to the items listed above; the instrument should be recalibrated prior to switching media sizes (e.g., from 90mm Petri dishes to 55mm contact plates or vice versa).

† Has excluded from ISO 17025 calibrations.

TSI Incorporated does hereby certify that the above described instrument conforms to the manufacturer's specifications (not applicable to As Found data) and has been calibrated using standards whose accuracies are traceable to the International System of Units (SI) through the National Institute of Standards and Technology (NIST) within the limitations of NIST's calibration services or have been derived from accepted values of natural physical constants or have been derived by the ratio type of self-calibration techniques. TSI is registered to ISO 9001:2015. TSI is accredited to ISO 17025:2017 by ANAB Certificate Number AC-2850.

The aforementioned uncertainty values represent expanded uncertainty and are based on a standard uncertainty multiplied by a coverage factor k=2 providing a confidence level of approximately 95%. This report may not be reproduced unless permission is obtained in writing from the TSI calibration service department issuing this report. The unit is found to have passed when the readings are within the specification limits of the device as presented as the allowable range stated with each measurement above. The customer shall assess the results and uncertainty in order to determine if the results meet their needs.

This certificate indicates Traceability to standards provided by (NIST) National Institute of Standards and Technology and/or a National Standards Laboratory.

A Test Uncertainty Ratio of at least 4:1 is maintained unless otherwise stated and is calculated using the expanded measurement uncertainty. Uncertainty evaluation includes the instrument under test and is calculated in accordance with the ISO "Guide to the Expression of Uncertainty in Measurement : (GUM). The uncertainty represents an expanded uncertainty using a coverage factor k=2 to approximate a 95% confidence level. Conformance based on Simple Acceptance as a Decision Rule, as defined in ILAC G8, with a measurement uncertainty value that will not exceed 50% of the tolerance unless otherwise stated by the customer. The results contained herein relate only to the item calibrated. This certificate shall not be reproduced except in full, without written approval of Control Company.

Nominal=Standard's Reading; As Left=Instrument's Reading; In Tol=In Tolerance; Min/Max=Acceptance Range; ± U=Expanded Measurement Uncertainty; TUR=Test Uncertainty Ratio; Accuracy=±(Max-Min)/2; Min=As Left Nominal(Rounded) – Tolerance; Max= As Left Nominal(Rounded) + Tolerance;

Nicol Rodriguez

Nicol Rodriguez, Quality Manager

Note :

Maintaining Accuracy:

In our opinion once calibrated your Digital Barometer should maintain its accuracy. There is no exact way to determine how long calibration will be maintained. Digital Barometer change little, if any at all, but can be affected by aging, temperature, shock, and contamination.

Recalibration:

For factory calibration and re-certification traceable to National Institute of Standards and Technology contact Control Company.

Issue Date : 03 Jul 2024

DESCRIPTION	QUANTITY
ISO 17025 Accredited Calibration & Full PM Service SAS Duo 360, Serial #: 23-D-20175; Head #: 61717 & 61718	1

Service Notes:

- The unit was received, inspected and found to be within manufacturer specifications (179.7 l/m on the left side & 183.3 l/m on the right side); please see attached calibration certificate for details.
- Performed ISO 17025 accredited calibration in wind tunnel.
- Performed full PM checklist, tightened hardware, stress tested battery, battery charger and all components.

Please contact Customer Support at support@biosci-intl.com or 301-231-7400 with any questions.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	K. CATEGORY 2 EXTENDED BUD REQUIREMENTS USP <797> Section 18 – Category 3 Requirements

CATEGORY 2 BUDs FOR ASEPTICALLY PROCESSED CSPs WITH STERILITY TESTING: Category 2 CSPs compounded aseptically, and which have passed sterility testing do not exceed the following BUDs: 30 days room temperature, 45 days refrigerated, or 60 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *visual inspection of CSP vial: BUD 90 days*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	At the time of inspection, a compounded sterile preparation (CSP) was observed with a Beyond-Use Date (BUD) of 90 days, which exceeds the Category 2 BUD limits despite the CSP being aseptically prepared and only supported by sterility testing. This occurred due to the overlap in implementing Category 3 procedures and a lack of documentation confirming that all Category 3 requirements were fully established at the time the 90-day BUD was assigned.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The CSP with the 90-day BUD was quarantined and evaluated for compliance with current USP <797> Category 3 standards.

A full review of the sterility testing and stability-indicating study supporting the BUD was conducted.

Any product with a BUD exceeding Category 2 limits without documented conformance to Category 3 standards was reassigned an appropriate BUD or discarded.

Staff were re-trained on distinguishing BUD limitations between Category 2 and Category 3.

Stability-Indicating Testing: particulate matter testing required by Category 3 was conducted by the third-party lab.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

As of July 1st, we have formally implemented Category 3 compounding protocols in compliance with USP <797>. This includes full adherence to the following Category 3 requirements:

- Use of sterile, single-use, low-lint garb that covers the entire body (hood, gown, boot covers, face cover, sterile gloves).
- No reuse of garb unless resterilized and disinfected per SOPs.

Personnel qualification

- Initial training and every 3 months: visual inspection of hand hygiene and garbing, media fill testing, gloved fingertip sampling and surface sampling, aseptic technique training and competency evaluations

Environmental Monitoring:

- Surface sampling performed weekly
- Viable air sampling performed monthly
- Nonviable air monitoring for particle counts during dynamic conditions certification every 3 months

Stability-Indicating Testing:

- BUDs > Category 2 limits are assigned only if supported by validated stability-indicating studies, including sterility, endotoxin, and potency.particulate matter testing.

EFFECTIVENESS CHECK:

Monthly audit of compounded sterile product batches for compliance with assigned BUDs and alignment with 3 requirements.

Quarterly internal review of environmental monitoring data, staff qualifications, and documentation to confirm ongoing adherence to Category 3.

Documentation verification during pharmacist release review to ensure assigned BUDs match supporting data and category classification.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	K. CATEGORY 2 EXTENDED BUD REQUIREMENTS

INVESTIGATION OF STERILITY TEST FAILURES: Sterility tests resulting in failure undergo prompt investigation into possible causes and requires identification of the microorganism(s) as well as evaluation of sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. Impact to other CSPs is assessed. Investigation and resulting corrective actions are documented. [USP 797 Section 12.2]

not available at the time of inspection

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	At the time of inspection, documentation related to the investigation of sterility test failures—including microbial identification, procedural evaluation, facility assessment, personnel involvement, and resulting corrective actions—was not readily retrievable.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Located and reviewed the sterility failure investigation documentation that was previously completed and confirmed to be compliant with USP <797> Section 12.2.

Provided the documentation to internal quality personnel and prepared it for immediate availability in case of future inspections.

Re-trained responsible personnel on document control procedures for inspection readiness.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Established a centralized quality folder (physical or electronic) to store all related reports, microbial identifications, evaluations, and corrective actions.

Updated the Document Control SOP to include a requirement for tagging and indexing all sterility test failure investigations by batch number and date.

Implemented a quarterly QA review to ensure all sterility failure investigations are complete, traceable, and accessible.

Conducted a refresher training session for compounding and QA staff on USP <797> Section 12.2, investigation expectations, and documentation practices.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	2/18/2025	**INSPECTIING BODY/PERSONNEL:**	Designated Persons
DESCRIBE THE PROBLEM:		**REFERENCE:**	Sterility Inestigation Report (02172025SEMA5A); USP <797>

A compounded sterile preparation (CSP) from Lot # 02172025SEMA5A failed routine sterility testing, indicating potential microbial contamination. This deviation is in direct violation of USP <797> sterility assurance requirements for finished CSPs.

DESCRIBE THE IMMEDIATE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The affected lot was immediately quarantined in the pharmacy and removed from distribution.
A recall was promptly issued for all dispensed units associated with the lot.
All potentially impacted patients and providers were notified of the recall, and instructions were provided for discontinuation and proper return or disposal.
Dispensing of other lots compounded under similar conditions was temporarily halted pending review.

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	A comprehensive investigation was conducted to determine the root cause of the contamination. The investigation included:
☑	Method	- Review of compounding records, aseptic technique logs, and environmental monitoring data
☐	Manpower Training	- Assessment of equipment calibration and maintenance records
☐	Measurements	- Review of personnel training and garbing procedures
☐	Materials	- Evaluation of sterilization and filtration methods used for the CSP
☐	Milieu/Environment	

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Personnel re-training on aseptic technique, garbing, and compounding protocols
Enhanced environmental monitoring during compounding and post-compounding cleaning verification
Re-validation of the sterilization and filtration process, including filter integrity testing procedures
Review and revision of SOPs related to sterility testing, lot release, and quarantine handling
Implementation of stricter lot release criteria, requiring dual review and documentation of sterility assurance checks

REVIEW DATE:	2/18/2025	**PHARMACY DESIGNEE:**	Amelia Yeh

	Mon 17 Mar 2025		

Any deviation, discrepancy, or unusual circumstances that occurred during reading or additional comment:

The media was turbid since March 3rd, 2025 (after 6 incubation days)

SECTION IV: CONTAMINATION INFORMATION

Attached R 02-001 ☐ ID Report ☑

☐ FTM In Fresh FTM ☐ TSA With FTM ☐ SDA With FTM ☑ TSB In Fresh TSB ☐ TSA With TSB ☐ SDA With TSB

Identification of contaminant (species level): Microbacterium paraoxydans

Classification: ☑ Bacteria ☐ Fungus / Yeast ☑ Gram (+) ☐ Facultative Anaerobe ☑ Aerobe ☐ Anaerobe ☐ Gram (-) ☐ Spore Forming

Contaminant brief info:

Microbacterium paraoxydans is a Gram-positive, non-spore-forming, rod-shaped bacterium belonging to the genus Microbacterium.M. paraoxydans has been isolated from human clinical specimens, including blood cultures from immunocompromised patients. It has been associated with bacteremia in individuals with conditions like leukemia and chronic kidney disease.

SECTION V: QUALITY CONTROL OF TEST CONTROLS

Attached CoAs ☑

Controls Name	Lot	Expiration Date	Quality Controls Test

SECTION VI: ENVIRONMENTAL AND PERSONNEL MONITORING RESULTS

Attached R 08-010

Temperature: 19.00°C	Humidity: 48.5%RH	Pressure: N/A	Personnel Viable Count (CFU): N/A

STIR ID: S317363

Particle Count In BSC (∑N /m³ (>5µM)): Conf	Viable Air Count (CFU): N/A	Viable Surface Count (CFU): N/A

Identification of any isolates found:
N/A
① Conforms (0 Particle Count)

Additional comments, if any:
The Bioquell Qube EM processing data showed that the particle count was within the state of control.

SECTION VII: EQUIPMENT PERFORMANCE

Equipment Id	Date of most recent calibration (successfully)	Equipment Id	Date of most recent calibration (successfully)
INC-007	11/7/2024	N/A	N/A
INC-009	11/15/2024		

Additional comments, if any:
HEPA certification of Pharmetric Laboratory space is carried out every 6 months. The most recent acceptable certification was completed on Jan, 2025 including the Bioquell Qubes.

SECTION VIII: DISINFECTION PROCEDURES

Additional comments, if any:
No deviation during the cleaning process.

SECTION IX: TRAINING RECORDS

Technicians	Date of most recent training (successfully)
Amanda Howard	Sep 3, 2024

Review of operator(s) training records:
The technician was trained in hand washing, sterile gloving, sterile gowning, aseptic technique, sterility processing and passed the required qualification.

STIR ID: S317363

Additional comments:
N/A

SECTION X: TESTING HISTORY RESULTS (FROM PREVIOUS LOTS)

Sample Id	Expected	Result
S325650	No Evidence of growth	No Evidence of growth
S325687	No Evidence of growth	No Evidence of growth

S297201	No Evidence of growth	No Evidence of growth
S293602	No Evidence of growth	No Evidence of growth

Additional comments, if any:
N/A

SECTION XI: ADDITIONAL TESTING, IF ANY

Test Date: N/A	Technician: N/A
Sample Id: N/A	Result: ☐ Fail ☐ Pass

Additional comments, if any:
N/A

SECTION XII: CONCLUSION

SITUATIONS FOR INVALIDATING A STERILITY TEST POSITIVE RESULT

1. Identification (to the genetic level) of the same organism(s) in the test environment as that found in the positive sterility test coupled with absence of the organism(s) in the environment or on personnel samples on the day(s) of manufacturing, as provided by the client	◉ No ○ Yes
2. Growth in the control samples (e.g., rinse controls, media controls, forceps control).	◉ No ○ Yes
3. Growth in the unopened media bottles or diluents (i.e., failed sterility test of media carried out on each lot).	◉ No ○ Yes

STIR ID: S317363

4. Complete loss of the integrity of the cleanroom and hoods	◉ No ○ Yes
5. Complete loss of the integrity of the incubated test assembly	◉ No ○ Yes
6. Demonstrated failure to follow the sterility test SOP	◉ No ○ Yes
7. Demonstration of failure to maintain clean environment in the cleanroom and hoods by environmental monitoring data	◉ No ○ Yes

Additional comments, if any:

Based on the information gathered, no situations were identified that would invalidate the Sterility Test Failure, and Pharmetric Laboratory considers the sterility test failure a valid result.

SECTION XIII: CAPA ◉ No ○ Yes

Samples accepted by Pharmetric Laboratory, LLC, are assumed to be prepared by the customer within the guidelines of USP <71> regarding sample size and number of units sampled. Pharmetric Laboratory, LLC conducts sterility testing using bioluminescence technology. Per USP <797> "A method not described in the USP may be used if verification results demonstrate that the alternative method is at least effective and reliable as the USP membrane filtration method as described in USP<71>." Sterility Testing performed by Pharmetric Laboratory using bioluminescence technology was validated as equal to compendial test by direct comparison. Validation documents are on file at Pharmetric Laboratory.

Samples accepted by Pharmetric Lab are assumed to be prepared by the customer within the guidelines of USP <71> regarding sample size and number of units sampled. Pharmetric conducts sterility testing using bioluminescence technology. Per USP <797> "A method not described in the USP may be used if verification results demonstrate that the alternative method is at least effective and reliable as the USP membrane filtration method as described in USP<71>." Sterility Testing performed by Pharmetric Lab using bioluminescence technology was validated as equal to compendial test by direct comparison. Validation documents are on file at Pharmetric Lab, LLC.

TEST DATE refers to start date. Please note some tests are carried out over multiple days.
The results on this CoA relate only to the item(s) tested and apply to the sample as received. This Report shall not be reproduced except in full without approval of the laboratory.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	M. PERSONNEL TRAINING & COMPETENCIES - ALL CATEGORIES

ONGOING CATEGORY 1 AND 2- GFT & GARBING ASSESSMENT: After initial garbing competency evaluations, compounding personnel complete garbing competency evaluation and GFT every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete garbing competency and GFT every 12 months. GFTs are appropriately incubated. [USP 797 Section 2.2] *GFT done annually for 1 Tech 4/30/25 and 8/7/24. 3 new personnel less than 6 months*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The primary issue stemmed from the absence of a centralized and automated tracking system to manage and alert for required GFT and garbing and media fill reassessments. The technician in question had been incorrectly classified as non-compounding staff, resulting in an annual rather than semiannual reassessment schedule. Additionally, while documentation for new employees was maintained, it was not organized in a manner that allowed for immediate retrieval during the inspection.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The technician was promptly reclassified as compounding personnel and completed a corrective GFT to meet the semiannual requirement (category 2)

A full audit of all GFT records was performed to identify any additional discrepancies or misclassifications.

Documentation verifying completion of initial garbing and GFT assessments for the three new employees was retrieved and reviewed.

Documents were reorganized within SharePoint for centralized storage and rapid accessibility.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

A GFT and garbing competency tracker was implemented in SharePoint, with role-based intervals and automated alerts for upcoming reassessments.

Personnel classifications were reviewed and updated to ensure appropriate assignment of reassessment frequencies.

The DP will conduct monthly audits of the tracker to validate compliance and accuracy of staff roles.

The relevant SOP is being revised to clearly define responsibilities for tracking competencies and required escalation steps when evaluations are missed or delayed.

REVIEW DATE:	7/14/2025	**PHARMACY DESIGNEE:**	Shibu John, Amelia Yeh

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	M. PERSONNEL TRAINING & COMPETENCIES - ALL CATEGORIES

ONGOING CATEGORY 1 AND 2- MEDIA FILL & ASSESSMENT: After initial aseptic manipulations competency evaluations, compounding personnel complete aseptic technique competency, media fill, GFTs, and surface sampling of DCA every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete media fill every 12 months. GFTs and surface samples are appropriately incubated. [USP 797 Section 2.3] *GFT done annually for 1 Tech 4/30/25 and 8/7/24. 3 new personnel less than 6 months*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The primary issue stemmed from the absence of a centralized and automated tracking system to manage and alert for required GFT and garbing and media fill reassessments. The technician in question had been incorrectly classified as non-compounding staff, resulting in an annual rather than semiannual reassessment schedule. Additionally, white documentation for new employees was maintained, it was not organized in a manner that allowed for immediate retrieval during the inspection.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The technician was promptly reclassified as compounding personnel and completed a corrective MF to meet the semiannual requirement (category 2).

A full audit of all MF records was performed to identify any additional discrepancies or misclassifications.

Documentation verifying completion of MF assessments for the three new employees was retrieved and reviewed.

Documents were reorganized within SharePoint for centralized storage and rapid accessibility.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

A centralized competency tracking system was implemented via SharePoint, with automated alerts based on personnel roles and assessment frequency.

Personnel classifications were reviewed and updated to ensure appropriate assignment of reassessment frequencies.

The DP will conduct monthly audits of the tracker to validate compliance and accuracy of staff roles.

The relevant SOP is being revised to clearly define responsibilities for tracking competencies and required escalation steps when evaluations are missed or delayed.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	M. PERSONNEL TRAINING & COMPETENCIES - ALL CATEGORIES

CLEANING PERSONNEL: Cleaning and disinfecting activities are performed by trained and appropriately garbed personnel using facility-approved agents and procedures. Cleaning personnel demonstrate knowledge and competency of core skills related to cleaning, disinfection, and maintenance of environmental conditions initially and at least once every 12 months. [USP 797 Sections 7 & 2.1] *No documentation available at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Documentation of cleaning personnel's training and competency assessments was not maintained in an easily accessible format for inspection readiness. The existing records were stored in a location that was not promptly retrievable by staff during the inspection.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

All current training and competency records for cleaning personnel were reviewed and compiled into a centralized and accessible file system.

A checklist was created to verify that each cleaning staff member has completed initial and annual competency evaluations in alignment with USP <797> requirements.

The records have been electronically archived and backed up for future accessibility.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

A policy has been implemented to require that all cleaning personnel competency assessments be completed upon hire and every 3 months (category 3)

All documentation will be maintained in both physical and electronic formats in a designated compliance folder accessible by authorized personnel.

Staff responsible for training oversight have been retrained on document retention protocols and inspection readiness.

A quarterly internal audit process will be implemented to ensure training documentation remains current and accessible.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	O. CLEANING AND DISINFECTING: ALL CATEGORIES

PEC SANITIZATION WITH STERILE 70% IPA: Sterile 70% IPA is applied to the horizontal work surface, including removable trays, immediately before initiating compounding and at least every 30 minutes. If a compounding process takes more than 30 minutes, the work surface is disinfected immediately after the end of the compounding process. Sterile 70% IPA is allowed to dry. [USP 797 Section 7] *compounding syringes and equipment introduced to PEC prior to cleaning of surface*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Lack of procedural clarity and personnel awareness resulted in the premature introduction of equipment and syringes into the PEC before proper disinfection of the work surface was completed.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Immediate: reinforced with all compounding personnel the requirement that no equipment may be introduced into the PEC until after full surface disinfection with sterile 70% IPA is completed and allowed to dry.

Conducted immediate retraining for all staff on the USP <797> requirements related to PEC sanitization timing and sequence.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Review standard operating procedure (SOP) to explicitly outline the proper sequence for PEC disinfection and equipment placement.

Monthly observational audits will be implemented to verify adherence to PEC sanitization protocols

Incorporate PEC sanitization and equipment introduction steps into annual media fill and aseptic technique requalification training.

Perform direct observation audits weekly for the next 3 months to confirm compliance with sanitization sequence.

Eequire sign-off by techinicians and DP on PEC cleaning logs, verifying completion of IPA application prior to equipment introduction.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	P. COMPOUNDING CSPs FROM NONSTERILE COMPONENTS OR SUPPLIES – CATEGORY 2 & 3

API MANUFACTURERS: APIs are manufactured by an FDA-registered facility in the U.S. or comply with the laws and regulations of the applicable regulatory jurisdictions outside of the U.S. [USP 797 Section 9.3.1] *manufactured in china*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Lack of accessible documentation demonstrating that the Chinese API manufacturer is registered with the FDA or complies with the applicable regulatory requirements outside of the U.S., as required under USP <797> Section 9.3.1.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Immediately obtained and reviewed the FDA registration list. It is also confirmed that the manufacturer is listed with the FDA as a registered API facility

Updated the vendor qualification file with the documentation demonstrating compliance with regulatory requirements.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Implement a standardized vendor qualification checklist to include FDA registration or GMP compliance verification for all U.S. and non-U.S. API manufacturers.

Conduct annual audits or reviews of all active API supplier documentation.

Train procurement and quality assurance personnel on USP <797> Section 9.3.1 requirements to ensure continuous compliance.

Perform a quarterly audit of API vendor files to ensure complete documentation is on record.

Verify that all new API sources are vetted using the revised checklist.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	P. COMPOUNDING CSPs FROM NONSTERILE COMPONENTS OR SUPPLIES – CATEGORY 2 & 3

STERILE, DEPYROGENATED SUPPLIES: Supplies in direct contact with CSPs are sterile and depyrogenated. A COA or similar conformance documentation is reviewed. [USP 797 Section 9.3.1] *no document available or reviewed by designated person at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The Certificate of Analysis (COA) was available and shown during the inspection; however, it was not reviewed or acknowledged by the designated person at the time, and was not formally included in the accessible documentation file.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The COA for the sterile, depyrogenated supplies is attached to this CAPA for reference and inspection record.

The COA has been filed in the designated quality documentation folder or link to download COA for future accessibility.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Establish a documentation review checklist for all sterile, depyrogenated supplies to ensure COAs are reviewed and signed by the designated person prior to inspection.

Maintain all COAs in a centralized and indexed electronic filing system for rapid retrieval.

Retrain designated personnel on documentation responsibilities and inspection readiness.

Review documentation retrieval logs quarterly to ensure accessibility and staff compliance.

REVIEW DATE:	7/14/2025	**PHARMACY DESIGNEE:**	Shibu John, Amelia Yeh

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	P. COMPOUNDING CSPs FROM NONSTERILE COMPONENTS OR SUPPLIES – CATEGORY 2 & 3

STERILIZATION OF INJECTABLES WITHIN 6 HOURS OF COMPLETION: Injectable CSPs containing nonsterile components or that come into contact with nonsterile devices (e.g., containers, tubing) during compounding are sterilized within 6 hours of completion. [USP 797 Section 10] *CSP discarded if it comes into contact with non-sterile components.*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The discrepancy may have resulted from a miscommunication or lack of clarity in how the question was presented during the inspection. The compounding team followed the procedure of sterilizing applicable CSPs within 6 hours of completion, in accordance with USP <797> standards. However, the information may not have been clearly conveyed or documented in a way that fully addressed the specific intent of the inspector's inquiry.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLEM:

Verified that all injectable CSPs compounded with non-sterile components or devices are consistently sterilized within 6 hours of completion.

Verified that all injectable CSPs compounded with non-sterile components or devices are consistently sterilized within 6 hours of completion.

Ensured that documentation is clear, specific, and retrievable during inspections to accurately reflect compliance.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Re-trained designated personnel on how to clearly and thoroughly communicate practices and documentation during regulatory inspections

Enhanced internal inspection readiness checklist to specifically include verification of sterilization timing and proper record presentation.

Included clear SOP references and batch record identifiers in inspection binders to ensure easy traceability of compliance activities.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	Q. STERILIZATION OF CSPs - CATEGORY 2 & 3

CSP PREFILTRATION: When CSPs are known to contain excessive particulate matter, prefiltration is performed using a filter of larger nominal pore size (e.g., 1.2 µm) or a separate filter of larger nominal pore size placed upstream of (i.e., prior to) the sterilizing filter. [USP 797 Section 10.2] *refiltered CSP is done using 0.22micron filter. does not match SOP*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	There was a misunderstanding regarding the distinction between prefiltration and refiltration. CSP prefiltration, as outlined in the SOP, applies when a compounded sterile preparation contains excessive particulate matter prior to passing through the sterilizing-grade filter. In such cases, a filter with a larger nominal pore size (e.g., 1.2 µm) will be used upstream of the 0.22 µm sterilizing filter, if applicable. The reference to "refiltering" with a 0.22 µm filter was misinterpreted as a deviation; however, no CSPs compounded to date have required prefiltration, as no excessive particulate burden has been observed. The filter label reviewed during the inspection pertained to the standard sterilizing-grade 0.22 µm filter, which was appropriately used.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The SOP has been reviewed and clarified to emphasize that prefiltration is only required when excessive particulate matter is present, and that the use of a 0.22 µm filter alone is appropriate for standard sterilizing filtration.

Documentation has been updated to remove misleading language about "refiltering" with 0.22 µm unless specifically required due to a processing deviation.

Staff were retrained on the difference between prefiltration (used upstream for particulate removal) and sterilizing filtration (standard 0.22 µm final filter) to ensure consistent understanding.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Future CSPs will be visually assessed and documented for particulate burden prior to filtration. If excessive particulates are noted, prefiltration will be performed using an appropriate filter in accordance with USP <797> and SOP.

A clarification memo has been distributed summarizing the proper application of prefiltration vs. refiltration to reduce ambiguity in documentation and practice.

SOP REFERENCE

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	Q. STERILIZATION OF CSPs - CATEGORY 2 & 3

CSP TERMINAL STERILIZATION SOP includes: 1) A description of CSP terminal sterilization process(es), including the temperature, pressure (if applicable), duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization methods and equipment. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *No personnel log available at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Terminal sterilization is not practiced at our facility because all compounded sterile preparations (CSPs) are heat-sensitive and would be degraded by terminal sterilization processes. Therefore, personnel have not undergone training specific to terminal sterilization, and no log was maintained.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The SOP will be updated to clearly state that terminal sterilization is not utilized due to the thermal sensitivity of all CSPs compounded at the facility.

A formal notation will be added to the training matrix indicating that terminal sterilization is not an applicable method for current compounding processes.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Ensure that future SOP reviews clearly document the rationale for exclusion of certain sterilization methods and their relevance to current practices.

Include a section in the personnel training log that designates which sterilization methods are applicable, with justification for non-applicable methods.

SOP REFERENCE

4.006 Sterilization Method

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	Q. STERILIZATION OF CSPs - CATEGORY 2 & 3

CALIBRATED DATA RECORDER: A calibrated data recorder or chart is used to monitor each steam or dry heat sterilization cycle and to examine for cycle irregularities (e.g., deviations in temperature or pressure). The calibrated oven is equipped with temperature controls and a timer. [USP 797 Section 10.3 & 10.4] *not available at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The data recording log for sterilization cycles was not maintained in an accessible and standardized format, leading to its unavailability during inspection.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Reinforce the procedure requiring documentation of each sterilization cycle using a calibrated data recorder or chart.

Implement a standardized log format for recording temperature, pressure, calibration dates, and any observed deviations.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Designate a responsible person to complete and review the sterilization log after each use.

Conduct periodic audits (monthly) to ensure logs are properly completed, reviewed, and readily retrievable for inspection.

Include the use of this log in staff training and competency assessments.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BDDY/PERSDNNEL:**	Florida Department of Health
DESCRIBE THE PRDBLEM:		**REFERENCE:**	R. STERILIZATION & DEPYROGENATION OF SUPPLIES & CONTAINER CLOSURE SYSTEMS - CATEGORY 2 & 3

STERILIZATION & DEPYROGENATION SOP's include: 1) A description of sterilization and depyrogenation process(es) used to sterilize and/or depyrogenated compounding supplies and container closure systems, including the temperature, duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization and depyrogenation methods and equipment used by the facility. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *SOP does not include personnel training or competency at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The original SOP focused primarily on the technical parameters of sterilization and depyrogenation (e.g., temperature, duration, load conditions, use of biological indicators), but inadvertently omitted structured documentation and procedures regarding personnel training and competency evaluation.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE/IMMEDIATE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

The Sterilization and Depyrogenation SOP has been updated to include:
- Initial training procedures for all personnel performing or overseeing sterilization and depyrogenation.
- Required competency assessments, including observation checklists and practical demonstrations.
- Ongoing competency reassessment every 12 months or when procedural changes occur.

A training log template has been developed and implemented to document training completion and competency evaluation.

Staff currently responsible for sterilization and depyrogenation will undergo re-training and complete competency assessments.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIDNS AND PDLICY AND/OR PROCEDURE CHANGE:

All SOPs will be reviewed and revised quarterly by the Quality Assurance Team to ensure training and competency requirements are clearly outlined.

A master training matrix will be maintained to track all personnel training and reassessment timelines.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	R. STERILIZATION & DEPYROGENATION OF SUPPLIES & CONTAINER CLOSURE SYSTEMS - CATEGORY 2 & 3

STERILIZATION CYCLE VALIDATION: When performed onsite, the efficacy of sterilization cycles used for supplies or container closure systems are established and documented. Each sterilization run or load is verified and documented by using appropriate biological indicators (e.g., spores of Geobacillus stearothermophilus) and other confirmation methods. [USP 797 Section 9.3.1 & USP 1229] *no report available at the time of inspection*

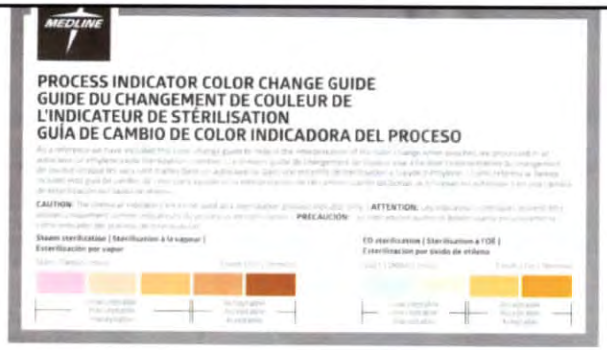
ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	While sterilization procedures were performed in accordance with internal protocols, the validation documentation, including the interpretation of process indicators, was not formally compiled into a report nor filed in the inspection-ready documentation system.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

A validated procedures is implemented to verify and document the effectiveness of each steam sterilization run. This includes the use of appropriate biological indicators, such as physicochemical process indicators. As shown in the attached image, we utilize physicochemical indicators during each cycle to provide visual confirmation that critical sterilization parameters, such as time, temperature, and steam exposure, have been consistently achieved.

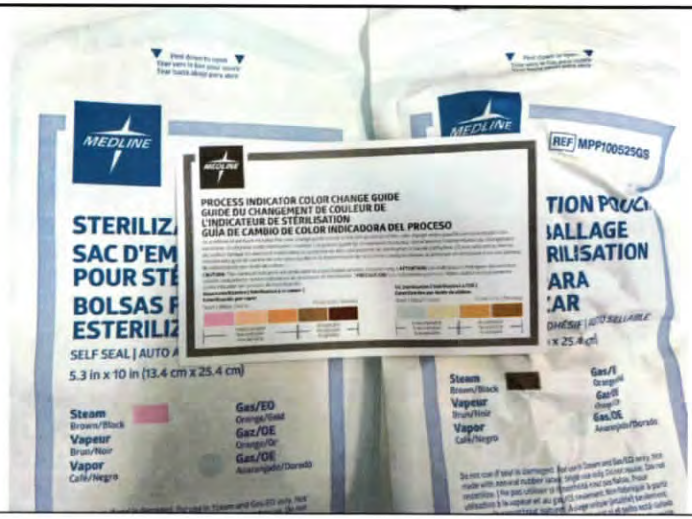
The sterilization SOP has been updated to:
- Require the completion and retention of a Sterilization Cycle Validation Report for each sterilization run.
- Include documentation procedures for the interpretation of chemical indicators (e.g., steam process indicator color change from pink to brown/black).
- Specify that validation reports must include the load contents, date, indicator lot, result interpretation, and personnel signatures.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:



A Sterilization Cycle Documentation Log has been implemented to ensure tracking of all sterilization runs with corresponding indicator verification and validation notes.

Staff performing sterilization have been retrained on documentation requirements and the proper use and interpretation of chemical/physical indicators.



Reports will be stored both physically and electronically for rapid retrieval during inspections.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	T. RELEASE INSPECTION AND TESTING – ALL CATEGORIES

CSP REJECTION & QUARANTINE: CSPs found to be of unacceptable quality (e.g., observed defects) are promptly rejected, clearly labeled as rejected, and segregated from active stock. [USP 797 Section 12.1] products not meeting standards are sent back into cleanroom and filtered again. If CSP does not pass inspection the second time it is discarded. No separation of stock or labeling "rejected".

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	Not adhere to the existing SOP for rejection and quarantine of nonconforming CSPs may be due to a lapse in attention to procedural compliance and a lack of ongoing reinforcement of expectations.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE/IMMEDIATE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

Personnel Re-Training:
- All relevant compounding staff will be retrained on the existing CSP Rejection and Quarantine SOP with emphasis on:
- Immediate labeling of CSPs as "REJECTED" upon identification of defects or failure to meet standards.
- Prompt segregation of rejected CSPs from active stock into the designated quarantine area.
- Documentation of rejection and any authorized reprocessing per protocol.

Accountability Measures:
Supervising pharmacists will conduct random checks during and after batch review to confirm rejected CSPs are properly labeled and quarantined per SOP.

Documentation Review:
A review of recent batch records and QA inspection logs will be conducted to identify any other instances of deviation and ensure retrospective documentation is corrected where necessary.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

A spot-audit form will be created and used by QA or designated staff to check CSP rejection handling compliance at least twice per month.

Monthly staff huddles will include review of common procedural lapses, including proper rejection and quarantine practices.

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	U. CSP HANDLING, STORAGE, PACKAGING, SHIPPING, & TRANSPORT – ALL

STORAGE AREA TEMPERATURE MONITORING: Temperature in CSP & component storage areas is monitored at least once daily and recorded on a log on days when the facility is open or by a continuous temperature recording device; temperature data is readily retrievable. Monitoring equipment is calibrated or verified for accuracy as recommended by the manufacturer or every 12 months. When CSPs have been exposed to temperature excursions above or below storage temperature limits for the CSP, a Designated Person determines whether the CSP has retained its integrity or quality. [USP 797 Sections 9.3 & 19.1]

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	The absence of a continuous monitoring system was due to reliance on manual temperature logs and daily readings, which were previously considered sufficient for ensuring temperature control. However, this method lacked real-time alerts and historical data logging features necessary for optimal compliance and oversight.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

A continuous temperature monitoring system, MECRO, was installed and activated immediately following the inspection. This system provides:
- 24/7 real-time monitoring of temperature and humidity conditions
- Automated alerts in case of deviations from defined thresholds
- Cloud-based data storage for historical temperature reports
- Compliance with USP <797> data integrity requirements
- Training was provided to designated staff on how to access, interpret, and respond to alerts and data generated by MECRO.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

The system is programmed to send alerts to designated personnel via email/SMS for any out-of-range conditions.

Monthly audits will be conducted to verify continuous functionality and documentation.

Ongoing staff training will occur annually or when system updates are made.

6.017 CORRECTIVE AND PREVENTITIVE ACTION (CAPA) AND/OR POLICY AND PROCEDURE CHANGE

DATE OF INSPECTION:	6/18/2025	**INSPECTIING BODY/PERSONNEL:**	Florida Department of Health
DESCRIBE THE PROBLEM:		**REFERENCE:**	V. STERILE QUALITY PROGRAM, SOP's & DOCUMENTATION- ALL CATEGORIES

ADR & COMPLAINT DOCUMENTATION: A complete record of each reported complaint and adverse reaction is created and retained per USP 797. [USP 797 Section 18.1] *no record available at the time of inspection*

ROOT CAUSE:		**DESCRIPTION:**
☐	Machines	A gap was identified in the current workflow regarding documentation and retention of complaints and ADRs. Although verbal and informal documentation may heve occurred, no formal, centralized, and retrievable record was maintained. This failure resulted from a lack of designated procedures and personnel accountability for properly documenting and archiving these reports.
☑	Method	
☐	Manpower Training	
☐	Measurements	
☐	Materials	
☐	Milieu/Environment	

DESCRIBE THE CORRECTIVE ACTION(S) TAKEN TO CONTAIN THE PROBLRM:

All past ADRs and complaints reported to the pharmacy will be retrospectively reviewed and documented using the approved Complaint & ADR Documentation Form.

Records will be compiled into a centralized log that includes the date of the event, nature of the complaint or reaction, product involved, actions taken, outcome, and follow-up communication.

Documentation will be maintained in both physical and digital formats, readily retrievable during inspections or audits.

PERMANENT CORRECTIVE AND PREVENTATIVE ACTIONS AND POLICY AND/OR PROCEDURE CHANGE:

Implement and train all staff on a standardized Complaint and Adverse Reaction Reporting SOP that includes:
- Procedures for intake, evaluation, documentation, and follow-up.
- Defined timelines and responsible personnel for reporting and documentation.

Designate a Compliance Officer to review and sign off on all complaints and ADRs within 48 hours of receipt.

Integrate ADR and complaint documentation into quality assurance audits on a quarterly basis to ensure ongoing compliance.

Include this documentation requirement in onboarding and annual competency training for all pharmacists and support staff.

3.002 DOCUMENTATION OF SOP TRAINING

Authorized by: Shibu John, Amelia Yeh **Date: 7/15/2025**

1.0 PURPOSE

1.1 The purpose of this standard operating procedure (SOP) is to establish the format and documentation of the training, education, and documentation of the SOPs associated with department-specific and facility-wide policies and procedures that must be followed by all personnel employed at RX COMPOUNDSTORE .

2.0 SCOPE

2.1 This procedure applies to all personnel employed at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and is responsible for employee training.

3.2 Supervisors/ Trainers are responsible for training, education, and documentation of new employees, students, and/or interns.

3.3 The PIC is responsible for ensuring all RX COMPOUNDSTORE personnel receive proper training for their assigned department and that documentation is complete.

4.0 REFRENCES

4.1 RX COMPOUNDSTORE SOPs

5.0 DEFINITIONS

5.1 SOP—Standard Operating Procedure(s)

6.0 FREQUENCY

6.1 Ongoing.

7.0 EQUPMENT & SUPPLIES

7.1 RX COMPOUNDSTORE SOP Manual

8.0 GENERAL INFORMATION

8.1 All personnel who compound or have direct oversight of compounding personnel must be initially trained and qualified by demonstrating knowledge and competency in compounding preparations according to requirements in USP chapters related to compounding.

8.2 Compounding personnel are responsible for ensuring that compounded preparations are accurately identified, measured, diluted, and mixed and are correctly purified, sterilized, packaged, sealed, labeled, stored, dispensed and or distributed.

8.2.1 These performance responsibilities include maintaining appropriate cleanliness conditions and providing labeling and supplementary instructions for the proper clinical administration of compound preparations.

8.3 Compounding personnel are responsible for compounding preparations of acceptable strength, quality, and purity in accordance with the prescription or medication order.

8.4 Compounding personnel are also responsible for dispensing the finished preparation, with appropriate packaging and labeling, and in compliance with the requirements established by the applicable state agencies, state boards of pharmacy, federal law, and other regulatory agencies where appropriate.

9.0 PROCEDURE

9.1 As part of orientation and onboarding of new personnel, candidates mustbe assigned to read and follow the SOPs associated with their designated department.

9.1.1 This is a self-paced reading assignment with a completion deadline of 90 days after starting employment with RX COMPOUNDSTORE.

9.1.2 The compliance officer will ensure deadlines are met and appropriate training documentation is signed off on.

9.2 Individuals who are engaged in drug or dietary supplement compounding mustbe proficient in compounding and should continually expand their compounding knowledge by participating in seminars and slash or studying appropriate literature.

9.3 All personnel who compound or have direct oversight of compounding personnel must be proficient in the SOPs of RX COMPOUNDSTORE.

9.4 All training received by employees will be documented and maintained in the employee training file.

9.5 This will be facilitated using the Documentation of Completion of Standard Operating Procedures log.

4.006 STERILIZATION METHODS

Authorized by: Shibu John, Amelia Yeh **Date Effective: 7/15/2025**

1.0 PURPOSE

1.1 This SOP will outline sterilization methods employed by aseptic processing personnel at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all aseptic processing compounding personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and ensure proper training of all personnel.

4.0 REFERENCES

4.1 USP Current Version <797> "Pharmaceutical Compounding – Sterile Preparations"

4.2 USP Current Version <800> "Safe Handling of Hazardous Drugs in the Healthcare Setting"

5.0 DEFINITIONS

5.1 Aseptic Processing—A mode of processing pharmaceutical and medical products that involves the separate sterilization of the product and the package and the transfer of the product into the container and its closure under at least ISO class 5 conditions

5.2 CSP – Compounded Sterile Preparation

5.3 Sterilization – Process to render articles or preparations free from viable microorganisms

5.4 Terminal Sterilization – Applying a lethal process to sealed containers for the purpose of achieving a predetermined sterility assurance level of usually less than 10^{-6}, or a probability of less than one in one million of a non-sterile unit.

5.5 Sterilizing Grade Membrane—Membranes what are documented to retain 100% of a culture of 10^{7} microorganisms of a strain of Brevundimonas (pseudomonas) diminuta per square centimeter of membrane surface under pressure of not less than 30PSI (2.0 bar). Such filter membranes are nominally at 0.22 µm or 0.2 µm nominal pore size, depending on the manufacturer's practice.

5.6 Sterilization by Filtration—Passage of a fluid or solution through a sterilizing grade membrane to produce a sterile effluent.

6.0 FREQUENCY

6.1 With each sterilization process.

7.0 EQUIPMENT & SUPPLIES

7.1 Autoclave

7.2 Dry Heat Oven

7.3 Sterilizing Grade Membrane Syringe Filters

8.0 GENERAL INFORMATION

8.1 The staff pharmacists who supervise sterile compounding at RX COMPOUNDSTORE must be responsible for determining that the selected sterilization method both sterilizes and maintains the strength, purity, quality, and packaging integrity of CSPSs.

8.1.1 The selected sterilization process is obtained from experience and appropriate information sources.

8.2 General guidelines for matching CSPs and components to appropriate sterilization methods include the following:

8.2.1 CSPs have been ascertained to remain physically and chemically stable when subjected to the selected sterilization method

8.2.2 Glass and metal devices may be covered tightly with aluminum foil, then exposed to dry heat in an oven at a mean temperature of 250° C for 30 minutes to achieve sterility and depyrogenation. Such items are either used immediately or stored until use in an environment suitable for compounding.

8.2.3 Personnel ascertain from appropriate information sources that the sterile microporous membrane filter used to sterilize CSP solutions, during either compounding or administration, is chemically and physically compatible with the CSP.

8.3 Achieving and maintaining sterility and overall freedom from contamination of a CSP is dependent on the quality status of the components incorporated, the process utilized, personnel performance, and the environmental conditions under which the process is performed.

8.4 The standards required for the environmental conditions depend on the amount of exposure of the CSP to the immediate environment anticipated during processing.

8.5 The quality and control of environmental conditions for Category 1,2 and 3 CSPs is explained in USP Chapter <797>.

8.6 Processes using non-sterile components require the use of a method of preparation designed to produce a sterile preparation.

9.0 PROCEDURE

9.1 Sterilization methods must be determined based on the unique properties of the chemicals or materials being sterilized to prevent degradation, destruction, or unwanted modification. An appropriate method both sterilizes and maintains the strength, purity, quality, and packaging integrity of the CSP. The selected sterilization method must preserve chemical and physical integrity, and must be documented with device details, temperature requirements, and length of exposure in the formulation record as applicable.

9.2 Sterilization by Filtration

9.2.1 Applies to CSPs that are heat sensitive.

9.2.2 Sterilizing filters must be sterile, depyrogenated, have a nominal pore size of 0.22 µm or smaller, and be appropriate for pharmaceutical use.

9.2.2.1 Filters labeled "for laboratory use only" or similar statement must not be used for compounding CSPs

9.2.2.2 Refer to Certificate of Analysis (CoA)

9.2.3 Commercially available sterile filters must be approved for human-use applications and sterilizing pharmaceutical fluids.

9.2.4 The compounding supervisor must ensure, directly or from appropriate documentation, that the filters are chemically and physically stable at the pressure and temperature conditions to be used, that they have enough capacity to filter the required volumes, and that they will achieve sterility and maintained pre filtration pharmaceutical quality, including strength of ingredients of the specific CSP.

9.2.5 Sterilizing filters must be certified by the manufacturer to retain at least 10^7 microorganisms of a strain of Brevundimonas diminuta per square centimeter of

upstream filter surface area under conditions similar to those in which the CSPs will be filtered. (i.e., pressure, flow rate, and volume filtered)

9.2.6 The filter dimensions in liquid material to be sterile filtered must permit the sterilization process to be completed rapidly, without the replacement of the filter during the process.

9.2.7 When CSPs are known to contain excessive particulate matter, a prefiltration step must be performed by placing a larger nominal pore size membrane is placed upstream from the sterilizing filter to remove gross particulate contaminants in order to maximize the efficiency of the sterilizing filter.

9.2.8 Filtration is a process that removes, but does not destroy, microorganisms. Filtration is the method of choice for solutions when terminal sterilization is not suitable.

9.2.8.1 Commercially available, pharmaceutical-grade, sterile filters, approved for use in sterilizing compounded sterile preparations must be used.

9.2.8.2 Sterilizing filters must be disposable, sterile, pyrogen-free, and have a nominal porosity of 0.2µm, or 0.22µm.

9.2.8.3 Category 2 CSPs should be filtered within six hours to minimize the generation of bacterial endotoxins.

9.2.9 Filter selection must consider the following:

9.2.9.1 Compatibility – Great caution must be used to ensure that the microporous membrane filter is chemically and physically compatible with the CSP. Biological products, alcohols, glycols, and Dimethyl sulfoxide (DMSO) are examples of products that can result in filter membrane incompatibilities with the CSP.

9.2.9.2 Pore size – Sterilizing filters of 0.2µm or 0.22µm or smaller porosity must be used for sterilization. Colloidal or viscous preparations may require a 0.45µm filter; however, extreme caution must be exercised in these circumstances and more stringent end product testing will be required.

9.2.9.3 Filters with a pore size of 0.45 to 1 µm are used for removing particulate prior to sterilization by 0.22µm filter or prior to terminal sterilization.

9.2.9.4 Fluid Volume – To provide a practical flow rate of a solution, a filter with the appropriate surface area must be used. Multiple filters may be required for large volumes.

9.2.9.5 Particulate Load – Some CSPs will have a large load of particulate matter. When compounds are known to have excessive particulate matter, a prefilter with a larger porosity membrane may be placed upstream of the sterilizing filter to remove gross particulate contaminants, and thus maximize the efficiency and endurance of the sterilizing filter.

9.2.10 Integrity tests (bubble point test) must be performed on all sterilizing filters as soon as possible after filtration. Results must be documented on filter package backing using a permanent marker which is then taped to original formula log sheet.

9.2.10.1 Extremely low test results indicate that the filter was defective, compromised, or ruptured during the sterilization process. The pharmacist in charge must be notified of any failures. Further testing, re-sterilization, or destruction of the CSP may be necessary.

9.2.10.1.1 A solution may only be refiltered for sterilization one additional time.

9.2.10.2 Test results lower than manufacturer's indicated specifications may not be an indication of a true failure. If the filter's membranes are not fully wetted at the time of the bubble point test, air can pass through the filter, resulting in a false bubble point. Pass additional 10 mL or more of a solution with the same physical properties of the CSP (i.e. aqueous, oil, alcohol) through the filter, making sure to hold the syringe and filter straight up so the solution passes over all the membranes. Retest the bubble point.

9.3 Terminal Sterilization by Dry Heat

9.3.1 Dry heat sterilization is employed for items that cannot be sterilized by steam or other means when the moisture would damage the material of the wrapping is impermeable.

9.3.2 Sterilization by dry heat requires higher temperatures and longer exposure times than does sterilization by steam.

9.3.3 Sterilization by dry heat is performed at temperatures lower and duration longer than those used to achieve depyrogenation.

9.3.4 Dry heat sterilization is usually done as a batch process in an oven designed for sterilization.

9.3.5 Heated filtered air must be evenly distributed throughout the chamber by a blower device.

9.3.6 The oven should be equipped with a system for controlling temperature and exposure.

9.3.7 During sterilization, sufficient space must be left between materials to allow for good circulation of the hot air.

9.3.8 Refer to reference material for time limits and temperature requirements for each component of the CSP. The active ingredient must remain potent and stable.

9.3.8.1 Dry heat sterilization is less efficient than moist heat and requires longer exposure and higher temperatures.

9.3.8.2 Materials that may be dry heated: bulk powders, petrolatum, oils, greases, and waxes.

9.3.8.3 Timing of the cycle does not begin until the specified temperature is reached. Temperature of the center of the CSP is measured rather than the chamber. Place probe of the thermometer in a beaker containing a liquid with the same physical properties as the CSP.

9.3.8.4 Each load sterilized by Dry Heat must be monitored every 30 minutes with the physical thermometer and documented on the *Sterilization and Depyrogenation* Log.

9.3.9 Description of dry heat sterilization conditions and duration for specific CSP must be included in written documentation.

9.3.10 The effectiveness of dry heat sterilization must be verified using appropriate Biological Indicator strips with organisms such as geobacillus stearothermophilus or bacillus subtilis.

9.3.11 Other confirmation methods such as temperature sensing devices must be used.

9.4 Depyrogenation by Dry Heat—See SOP 4.008 Depyrogenation

9.4.1 Dry heat depyrogenation must be used to render glassware or containers such as vials free from pyrogens as well as viable microbes.

9.4.2 The depyrogenation cycle should be 30 minutes at 250° C

9.4.3 The description of the dry heat depyrogenation cycle and duration for specific load items must be included in written documentation.

9.4.4 The effectiveness of the dry heat depyrogenation cycle must be verified using endotoxin challenge vials (ECVs).

9.4.5 The bacterial endotoxin test should be performed on the ECVs to verify that the cycle is capable of achieving a 3-log reduction in endotoxin.

9.5 Terminal Sterilization by Steam (Autoclave)

9.5.1 The process of thermal sterilization by employing saturated steam under pressure, or autoclaving, is the preferred method to terminally sterilize aqueous preparations that have been verified to maintain their full chemical and physical stability under the conditions employed.

9.5.2 Not directly exposing items to pressurized steam may result in survival of microbial organisms and spores.

9.5.3 Sealed containers must be able to generate steam internally; Thus, a stoppered and crimped empty vial must contain a small amount of moisture to generate steam in order to sterilize the inside of the vial.

9.5.4 Refer to reference material for time limits and temperature requirements for each component of the CSP.

9.5.4.1 The active ingredient must remain potent and stable.

9.5.4.2 Autoclaving should be reserved for items that can be penetrated by water vapor (steam).

9.5.4.3 Dry, sealed containers, oils, and waxes are not suitable for steam sterilization.

9.5.5 To achieve sterility, materials must be exposed to steam at 121°C for a minimum of 15 minutes under pressure of about one atmosphere or 15 pounds per square inch (psi).

9.5.6 The Autoclave sterilization cycle must be verified by placing a Biological Indicator strip laden with organisms such as geobacilus stearothermophilus or bacillus subtilis in with each load.

9.5.6.1 Monitoring data from each cycle (i.e. a printout of the preset and actual parameters of the cycle) must be recorded to ensure that all critical parameters are within specified limits.

9.5.6.1.1 Remove printout from the autoclave printer and attach to formula worksheet as documentation of processed CSP.

9.5.6.2 The CSP or equipment load must be inspected for damage that may have occurred during the sterilization cycle.

9.5.7 Plastic, glass, and metal devices must be placed in low-particle shedding envelopes to prevent post-sterilization contamination.

9.5.8 The description of steam sterilization conditions and duration for specific CSPs must be included in written documentation.

9.5.9 The effectiveness of steam sterilization must be verified using appropriate Biological Indicator strips laden with organisms such geobacilus stearothermophilus or bacillus subtilis.

9.5.10 Other confirmation methods such as temperature sensing devices must be used.

9.5.11 The steam sterilization time/temperature/pressure documentation tape should be affixed to all formula records for CSPs terminally sterilized using steam.

9.6 Sterilization Indicators such as Biological Indicator strips to validate terminal sterilization processes, bacterial and fungal growth media plates and test tubes must be used for environmental monitoring, personnel monitoring and to validate sterile processes during aseptic manipulation.

9.6.1 Sterilization Indicator via Direct Inoculation – Fluid Thioglycolate (Thio), USP

9.6.1.1 Ingredients: Pancreatic Digest of Casein, Dextrose, Yeast Extract, Sodium Chloride, Sodium Thioglycolate, L-Cystine, Agar, Resazurin Indicator, Deionized Water.

9.6.1.2 Storage: 2-25°C, away from direct light. Media should not be used if there are any signs of deterioration (discoloration), contamination, or if the expiration date has passed. Media should appear translucent and light amber in color. Containers with oxygen present will have a pink layer at the medium-air interface – see procedure.

9.6.1.3 Intended Use: Recommended for cultivation of aerobic, microaerophilic, and anaerobic microorganisms in normally sterile materials. Recommended by FDA, NIH, NF, and USP for sterility testing of clear fluid biologics and other sterile products. Resazurin is an oxidation-reduction indicator that turns pink when increased oxidation has occurred.

9.6.1.4 Procedure: Media may become oxidized in the vial during shipping. Either heat media up to 100°C in a water bath (do not boil more than once) or allow vials to stand still for a few hours to restore to proper condition. It is common for a whitish precipitation to from, due to the agar content, but this does not affect the performance of the medium. Also due to the agar, a slight turbidity of haziness may be present. For CSP testing, inoculate the medium as soon as possible after the CSP is completed.

9.6.1.5 Incubation: Sterile adhesive seals should be aseptically affixed to the rubber closure, then incubate at 30-35°C for a minimum of 14 days. Keep shaking to a minimum to maintain anaerobic conditions.

9.6.2 Sterilization Indicator via Direct Inoculation for fungal growth – Sabouraud Dextrose Broth (SabDex), USP

9.6.2.1 Sabouraud Dextrose Broth (SDB) is designed for the cultivation of yeasts and molds as well as for the determination of the fungistatic activity of pharmaceutical products.

9.6.2.2 Storage: 2-25°C, away from direct light. Media should not be used if there are any signs of deterioration (discoloration), contamination, or if the expiration date has passed. The broth is clear and yellowish in color.

9.6.2.3 Intended Use: Recommended for cultivation of aerobic, microaerophilic, and anaerobic microorganisms in normally sterile materials. Recommended by FDA, NIH, NF, and USP for sterility testing of clear fluid biologics and other sterile products.

9.6.2.4 Procedure: For CSP testing, inoculate the medium as soon as possible after the CSP is completed. For strain subculture, the strain to be examined is directly inoculated into the broth and incubated at 20--25°C for 48 hours. The broth is then incubated at 30-35°C for 5 days. NOTE— The incubation time varies according to the type of microorganism (consult professional references). After incubation, microbial growth can be observed by turbidity of the broth.

9.6.2.5 For sample preparation, the product to be tested should be prepared as described in EP (2.6.12). 10 ml or the quantity corresponding to not less

than 1 g or 1 ml is inoculated into 100 ml of Sabouraud Dextrose Broth and mixed.

9.6.2.6 Incubation: Incubate at 20—25 C x 48 hours then 30—35 C x 5 days. Avoid shaking to maintain anaerobic conditions.

9.6.3 Sterilization Indicator via Direct Inoculation – Tryptic Soy Broth (TSB), USP (also known as Soybean-Casein Digest)

9.6.3.1 Ingredients: Pancreatic Digest of Casein, Sodium Chloride, Papaic Digest of Soybean Meal, Dextrose, Dipotassium Phosphate, Deionized Water.

9.6.3.2 Storage: 2-25°C, away from direct light. Do not use if there are any sign of deterioration (discoloration), contamination, or expiration date has passed. Media should appear clear, and light amber in color.

9.6.3.3 Intended Use: General purpose medium for isolation and cultivation of a wide variety of bacteria and fungi. USP NF describes its use for sterility testing. Supports growth of the majority of bacteria and fungi. Recommended for sterility testing to detect contamination with low incidence fungi and aerobic bacteria. Promotes exponential colonization of bacteria that are most likely to be transmitted to CSPs from compounding personnel and the environment.

9.6.3.4 Procedure: Inoculate the medium as soon as possible after the CSP is completed.

9.6.3.5 Incubation: Incubate at 30—35°C x 5 days.

9.6.4 Biological Indicator of Sterilization—Steam or Dry Heat Sterilization: SporView Culture Set

9.6.4.1 Bromocresol purple.

9.6.4.2 Storage: Controlled room temperature. Do not use if there are any sign of deterioration (discoloration), contamination, or expiration date has passed. Media should appear clear, and light purple in color.

9.6.4.3 Intended Use: Biological Indicator (BI) system certified for use with steam, EO gas, chemical vapor, and dry heat. Biological indicators can be used to verify sterilization equipment and the sterilization of CSPs and equipment/materials used in sterile compounding. Monitors all sterilization processes requiring Geobacillus stearothermophilus, bacillus subtilis or B. atrophaeus spores.

9.6.4.4 Procedure: Place one or more BI strips inside the sterilizing chamber. Test the most challenging areas as indicated per equipment manual. After processing the load according to manufacturer's instructions, transfer the strip the cleanroom. Aseptically (the media must not be contaminated by personnel) transfer the BI strip into the Bromocresol Purple culture media tube. Tube is then placed in the appropriate incubator. Record date and time placed in incubator on log.

9.6.4.5 Steam sterilizers should be biologically tested at least weekly as recommended by AAMI, ADA, and CDC.

9.6.4.6 Incubation:

9.6.4.6.1 For Steam: Incubate in dry incubation cube at 56 ± 2°C for 7 days. Check samples in incubator daily and record results on log.

9.6.4.6.2 For Dry Heat: Incubate at 30—35 C for 7 days. Check samples in incubator daily and record results on log

9.6.4.7 Record final result on log. Purple colored media indicates cycle was properly sterilized. Media that turns to yellow is indicative of a fail and the sterilization cycle on the items that had been processed in the failing cycle must be quarantined, recorded, and destroyed.

9.6.4.8 Sterile department manager, staff pharmacist, and QMT must be notified of any failures.

9.6.5 Sterilization Indicator – Tryptic Soy Agar (TSA) Plates

9.6.5.1 Ingredients: Pancreatic Digest of Casein, Peptic Digest of Soybean Meal, Sodium Chloride, Tween 80, Lecithin, Agar, Deionized Water.

9.6.5.2 Storage: 2-8°C, away from direct light. Media should not be used if there are any signs of deterioration (shrinking, cracking, or discoloration), contamination, or if the expiration date has passed. Media should appear clear to slightly hazy and light amber in color.

9.6.5.3 Intended Use: General growth medium for establishing microbiological trends, alerts and action levels in biologically controlled environments. Prepared according to USP standard formula for Soybean-Casein Digest Agar to promote growth. Use for surface and fingertip sampling post CSP processing. Used during Environmental Monitoring (EM) to validate state of control of classified areas.

9.6.5.4 Never perform EM while active compounding is occurring.

9.6.5.5 Procedure: If condensation of the packaging or plate occurs, remove from innermost bag in a sterile environment and allow to dry to 10-15 minutes prior to use. Allow media to warm to room temperature and dry before use. Do not invert the lid while removed to avoid exposure to falling sediment. Plate edges should be wrapped with lab film after use to create a barrier against uncontrolled air quality.

9.6.5.6 Incubation: Incubate at 30-35°C inverted for 48 hours, then at 20—25 °C for 5 days. Samples must be monitored daily for growth and results recorded on log in Simplifi.

9.6.6 Sterilization Indicator – Sabouraud Dextrose Agar (SabDex) Plates

9.6.6.1 Ingredients: Dextrose (Glucose), Peptone, Agar, Distilled Water.

9.6.6.2 Storage: 2-8°C, away from direct light. Media should not be used if there are any signs of deterioration (shrinking, cracking, or discoloration), contamination, or if the expiration date has passed. Media should appear clear to slightly hazy and light amber in color.

9.6.6.3 Intended Use: General growth medium for establishing microbiological trends, alerts and action levels in biologically controlled environments. Use for surface and fingertip sampling post CSP processing. Used during Environmental Monitoring (EM) to validate state of control of classified areas.

9.6.6.4 Never perform EM while active compounding is occurring.

9.6.6.5 Procedure: If condensation of the packaging or plate occurs, remove from innermost bag in a sterile environment and allow to dry to 10-15 minutes prior to use. Allow media to warm to room temperature and dry before use. Do not invert the lid while removed to avoid exposure to falling sediment. Plate edges should be wrapped with lab film after use to create a barrier against uncontrolled air quality.

9.6.6.6 Incubation: Incubate at 20—25 °C for no less than 5 days. Samples must be monitored daily for growth and results recorded on log in Simplifi.

9.6.7 Users of commercially prepared media may be required to perform quality testing with at least one known organism to demonstrate growth or a positive reaction.

9.6.8 Sterilization Indicators should be handled by Aseptic Personnel only.

9.6.9 Observe biohazard precautions and aseptic technique. Biohazard waste samples should be sterilized before disposal.

4.1 Instruction manual(s)

4.2 USP Current Version <41> "Weights and Balances"

4.3 USP Current Version <1251> "Weighing on an Analytical Balance"

5.0 FREQUENCY

5.1 Calibration check (verification) must be performed daily when the balance is in use

6.0 DEFINITIONS

6.1 Tare – the deduction of the weight of a container used to calculate the weight of its contents.

6.2 Measurement Uncertainty – random plus systematic error.

6.3 Analytical Balance – a balance with a minimum sensitivity of 0.0001g.

6.4 Top-Loading Balance – a pan-loading balance with a typical sensitivity of 0.01g or 0.1g.

7.0 EQUIPMENT & SUPPLIES

7.1 Weight set

7.2 Receivers (weigh boats, weighing paper, beakers, flasks, weighing bottles, etc.)

7.3 Lint-free cloth or equivalent

7.4 Spatula or appropriate tool to transfer the sample to be weighed from the container to the receiver

7.5 Mild detergent

7.6 Isopropyl alcohol 70%--IPA 70%

7.7 Forceps or hemostats

8.0 GENERAL INFORMATION

8.1 Allow at least twenty minutes of warm up time before using the balance to give internal components sufficient time to stabilize. Analytical Class I balances require at least 2 hours of warm-up time.

8.2 Keep the operating environment as clean as possible to avoid an adverse effect on the reliability and accuracy of the unit.

8.3 Always set up the unit on a level surface in a clean, draft-free area. When using the balance in a hood or glove box, make sure the doors remain closed during weighing.

8.4 Do not install the balance near air conditioning or heating vents.

8.5 Do not install the balance near vibrating, rotating or reciprocating equipment.

8.6 Do not install the balance near magnetic fields or equipment that generates magnetic fields.

8.7 Do not disturb the balance while calibration is being performed.

8.8 The weight of the receiver plus the weight to be measured cannot exceed the limit of the balance.

8.9 It is necessary to differentiate between calibration and verification.

8.9.1 All balances must be calibrated on a yearly basis by an outside contractor. A balance that is new can be verified for the first year and then must be calibrated by the outside contractor every year thereafter.

8.9.2 Calibration may substitute for verification, but verification may not substitute for calibration.

9.0 PROCEDURE

9.1 Use

9.1.1 Verify that the balance is level prior to weighing. If the balance is not level or has been moved, then follow the steps below.

9.1.1.1 Viewing the balance from above, turn the leveling foot opposite of the location of the bubble clockwise or counterclockwise until the bubble is positioned in the center of the black ring.

NOTE: The bubble moves toward a foot when that foot is turned clockwise, and the bubble moves away from a foot when that foot is turned counterclockwise.

9.1.1.2 Repeat step 9.1.1.1 with the other leveling foot until the bubble is positioned in the center of the black ring.

9.1.1.3 Avoid extending the leveling feet too far.

9.1.1 Balances and analytical balances in the non-sterile and sterile labs

9.1.1.1 To tare the balance, press the zero button or the tare button

9.1.1.2 Place items to be weighed on the balance pan, and wait for the value to stabilize

9.1.1.3 When using a container to weigh items, place the empty container on the balance pan, wait for the value to stabilize, and then tare the balance. When the display reads zero, add the item to the container, wait for the value to stabilize and read the weight on the display.

9.1.1.4 Double-check the accuracy of weighing against the compounding formula before proceeding with the compounding procedure and print

9.1.1.5 Remove any chemical or material that has spilled on the pan or under the pan with a damp low-lint wipe or a scale brush.

9.1.1.6 Remove any chemical or material that has spilled on the pan or under the pan with a damp low-lint wipe or a scale brush.

9.2 Cleaning/Maintenance

9.2.1 Balances must be thoroughly cleaned before and after use and between processes to prevent cross-contamination.

9.2.1.1 Remove weigh pan and wipe down all horizontal and vertical surfaces of the balance with a disposable wiper wetted with IPA 70%.

9.2.2 Cleaning should be performed after spills occur or if the balance is visibly dirty.

9.2.3 Clean the balance with a mild detergent using a soft cloth or a low-lint wipe.

9.2.4 Keep calibration masses in a safe, dry place.

9.2.5 If any error messages display, notify Pharmacist-in-Charge (PIC) or other management.

5.003 REFRIGERATOR FREEZER—USE, CLEANING, AND MAINTENANCE

Authorized by: Shibu John **Date Effective: 4/1/2023**

1.0 PURPOSE

1.1. The purpose of this procedure is to outline the use, calibration and maintenance of the drug product refrigerator and freezer at RX COMPOUNDSTORE

2.0 SCOPE

2.1. This procedure applies to all compounding personnel utilizing the drug product refrigerator and/or freezer at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1. The Pharmacist in Charge (PIC) must supervise this procedure and is responsible for personnel training.

4.0 REFERENCES

4.1. USP Current Version <797> ""Pharmaceutical Compounding – Sterile Preparations"

4.2. USP Current Version <795> ""Pharmaceutical Compounding – Non-Sterile Preparations"

4.3. Refrigerator manual

4.4. Freezer manual

5.0 DEFINITIONS

5.1. N/A

6.0 FREQUENCY

6.1. Temperature monitoring must be completed once daily during normal business hours.

6.2. Cleaning of the drug product refrigerator and freezer must be completed and documented monthly.

6.3. Temperature calibration must be completed annually or whenever there are multiple temperature shifts noted during daily monitoring.

6.4. Maintenance must be performed annually or according to the manufacturer's specifications.

7.0 EQUIPMENT/MATERIALS

7.1. Calibrated refrigerator/freezer thermometer - MECRO

7.2. Cleaning and disinfecting solution

8.0 GENERAL INFORMATION

8.1. N/A

9.0 PROCEDURE

9.1 Use and Daily Monitoring

9.1.1 When items are placed in or removed from the drug product refrigerator or freezer, they should be added or removed quickly, and the door should be closed immediately.

9.1.2 A calibrated refrigerator or freezer thermometer, that can be read from the outside without opening the door, must be positioned in the middle of one of the drug product refrigerator or freezer shelves, or as near to the center as possible.

9.1.3 The designated temperature range for the drug product refrigerator and freezer (according to USP <797> and <795>) is 2°C to 8°C and -20°C to -10°C, respectively. The appropriate temperature range should be clearly labeled on the drug product refrigerator or freezer.

9.1.4 Daily temperature readings of the drug product refrigerator and freezer must be recorded electronically on the appropriate log sheet.

9.1.5 If the observed temperature of the drug product refrigerator or freezer does not fall within the designated range, adjustment should be made, and the temperature rechecked in 30 minutes.

9.1.5.1 If the observed temperature of the drug product refrigerator or freezer does not fall within the designated range, adjustment should be made, and the temperature rechecked in 30 minutes.

9.5.1.2 If the observed temperature of the drug product refrigerator or freezer does not fall within the designated range, drug products must be removed immediately and placed in an alternate, properly calibrated drug product refrigerator or freezer.

9.1.6 Discard any products that are damaged or potentially damaged by the variation in temperature.

9.1.7 At the end of each month, the daily monitoring logs must be reviewed by the Pharmacist-in-charge and must be retained in the quality assurance file

9.2 Cleaning

9.2.1 Remove any materials that may be harmed by 70% isopropyl alcohol or by the temperature change that will occur when the refrigerator or freezer door is open for cleaning. Place materials in a cooler box with ice packs or alternate fridge during cleaning.

9.2.2 Working from top to bottom, the interior top surface, side walls, shelves and bottom surface of the unit should be cleaned with a low-lint wiper saturated with 70% isopropyl alcohol.

9.2.3 Allow the interior to dry thoroughly before closing the unit. If there is visible cleaning solution on any surface, dry with a disposable wiper.

9.2.4 The exterior should be cleaned using a suitable cleaning and disinfecting solution.

9.2.5 Document monthly cleaning of the drug product refrigerator and freezer appropriately.

9.3 Calibration

9.3.1 A calibrated refrigerator or freezer thermometer, that can be read externally, must be positioned inside near the center of the refrigerator or freezer.

9.3.2 Allow one hour for the thermometer to equilibrate with the environment.

9.3.3 Once one hour has elapsed, read the thermometer. If the reading does not fall within the desired temperature range, adjust the refrigerator or freezer temperature control accordingly. If the reading does fall within the desired temperature range, proceed to step 9.3.6.

9.3.4 Allow one hour for the refrigerator or freezer to adjust to the new setting and allow for the thermometer to equilibrate with the environment.

9.3.5 Repeat steps 9.3.3 and 9.3.4 until an appropriate temperature is achieved.

9.3.6 An entire cooling cycle must be observed to make certain that the extremes fall within the designated temperature range. If the designated temperature range cannot be obtained, drug products must be removed immediately and placed in an alternate drug product refrigerator or freezer, and further investigation is required.

9.3.7 All temperature readings must be recorded on the appropriate log sheets.

9.3.8 Each completed temperature calibration log must be filed.

9.4 Maintenance

9.4.1 Maintenance of the drug product refrigerator or freezer must be performed as needed or according to the manufacturer's specifications.

9.4.2 The drug product refrigerator or freezer should be defrosted to prevent build-up of ice on the coils. Refer to manufacturer's owner manual for instructions.

9.43 Check circulating fans for excessive noise and build-up of lint on the blades.

9.4.4 Wipe off the door gasket and inspect for cracks during monthly cleaning.

5.004 AUTOCLAVE--USE, CLEANING AND MAINTENANCE OF THE TUTTNAUR EZ10 ELECTRONIC TABLETOP

Authorized by: Shibu John, Amelia Yeh **Date: 7/15/2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to establish requirements for the use, verification and maintenance of the Electronic Tabletop Autoclave at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all sterile compounding personnel using the Tuttnauer EZ10 Electronic Tabletop Autoclave at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and ensure personnel training.

4.0 REFERENCES

4.1 Instruction manual

5.0 FREQUENCY

5.1 An initial verification of each cycle of the autoclave must be performed and documented on the Autoclave Verification Cycle form (F.5.004.1--Attachment 1).

5.2 Re-verification of the autoclave cycles must be performed and documented after any significant event (i.e. moving the equipment or a major repair).

6.0 DEFINITIONS

6.1 LUMAC – Log of Use, Maintenance and Cleaning

7.0 EQUIPMENT AND SUPPLIES

7.1 Tabletop Electronic autoclave capable of achieving and maintaining a minimum temperature of 121 °C and a minimum pressure of 15 psi with the ability to chart and print temperature, pressure, and time increments throughout the cycle

7.2 Distilled or purified water

7.3 Non-abrasive chamber cleaner (Speedclean, Chamber Brite, etc.)

7.4 Mild detergent solution

7.5 Soft cloth or sponge

7.6 Compressed air

7.7 Lint-free wipe

7.8 Equipment LUMAC

7.9 Digital thermometer and/or biological or chemical indicators

8.0 GENERAL INFORMATION

8.1 Personnel using an autoclave must be thoroughly familiar with the sterilization process and the use of the equipment involved. Personnel are responsible for:

8.1.1 Establishing that the equipment is capable of operating within the required parameters.

8.1.2 Establishing that steam sterilization is appropriate for the products or CSP to be sterilized.

8.1.3 Conducting replicate cycles employing actual or simulated product and demonstrating the success of the procedure.

8.1.4 Monitoring the process during routine operation.

8.1.5 Completing all documentation.

8.2 Water used in the autoclave must be free from minerals and deposits that may build up inside the autoclave on the steel surface.

8.3 The autoclave should be installed in conformance with the following parameters:

8.3.1 Verify electrical outlet is appropriate for use.

8.3.2 The unit must be placed on a level, heat and water-resistant surface.

8.3.3 Allow at least 3 inches between the unit and walls on the sides and back for air circulation and allow at least 8 inches between the top of the unit and any objects overhead.

8.3.4 If the unit operates continuously, it must be in an area where steam emissions will not damage equipment or materials.

9.0 PROCEDURE

9.1 Instructions for use:

9.1.1 Remove water reservoir cover and ensure that the water reservoir is filled with distilled water or purified water to the appropriate fill line.

9.1.2 Turn on the rocker switch located below the front panel.

9.1.3 Choose and press the appropriate program button. The light indicator of the selected program is illuminated indicating which program has been selected. The preset data of the program, sterilization temperature, pressure, time, and dry time (if applicable) is displayed.

9.1.4 Load the packaged material to be sterilized into the chamber.

9.1.4.1 Items should be arranged loosely to allow for proper airflow around each item.

9.1.5 Close the door and spin handle until snug ensuring a tight seal between the door gasket and the chamber. Do not over tighten as this may damage the gasket. If the autoclave does not reach the desired temperature and/or pressure, make sure the door is fully sealed.

9.1.6 Press the START key. The "Water Inlet" light is illuminated until the correct volume of water is automatically introduced into the chamber.

9.1.7 Once the water has been filled into the chamber the cycle will begin the sequence of automatic operations. (See operators manual to change the preset cycle parameters).

9.1.8 For any process that includes a drying cycle, the dry cycle begins immediately after the steam exhaust stage. The autoclave is equipped with an air compressor, which draws air through a HEPA filter (0.2μm) during the drying cycle and pushes the air through the heated chamber and out the air outlet valve to remove moisture and facilitate the drying operation. Drying is performed with the door closed.

9.1.9 At the end of a cycle an alarm sounds for approximately five seconds and the "Start" light is no longer illuminated. The air outlet valve is automatically opened to prevent the formation of a vacuum.

9.1.9.1 In the event of a program failure, the exhaust valve is automatically opened to release pressure from the chamber and a continuous buzz will sound for five seconds followed by an interrupted buzz of seven seconds.

9.1.10 Open the door and unload the sterilized material from the chamber. A minimum of 10 minutes must be observed between the end of a cycle and the start of a new cycle. This will prevent overheating of the autoclave.

9.1.11 Once the cycle is complete, attach all printouts to the corresponding formula worksheet (see section 9.5).

9.1.12 When using a biological indicator, follow the manufacturer's instructions for proper incubation process, time, and temperature.

9.2 Verification

9.2.1 Empty-Chamber Verification

9.2.1.1 Prior to initial use for actual sterilization of product, turn on the autoclave to the desired setting, place a chemical indicator in the middle of the chamber, and allow the cycle to run.

9.2.1.2 Once the cycle is complete, remove the indicator.

9.2.1.3 Document the use of the indicator by recording accordingly in Simplifi and monitoring daily.

9.2.2 Filled-Chamber Verification

9.2.2.1 Turn on the autoclave to the desired setting, place a chemical indicator vial in the middle of the load, and allow the cycle to run.

9.2.2.2 Once the cycle is complete, remove the indicator.

9.2.2.3 Document the use of the indicator by recording accordingly in Simplifi and monitoring daily.

9.3 Cleaning/Maintenance

9.3.1 Daily

9.3.1.1 Check water level and add distilled or purified water as needed.

9.3.1.2 Clean the exterior of the unit with a soft cloth.

9.3.2 Weekly

9.3.2.1 Clean the air jet by inserting a pen or similar object into the loop and move wire in and out a minimum of ten times.

9.3.2.2 Clean the water sensor in the rear of the chamber with a damp cloth or sponge.

9.3.2.3 Clean and descale the chamber, copper tubes and the reservoir using non-abrasive chamber cleaner.

9.3.2.4 The following must be completed without interruption.

9.3.2.4.1 When the autoclave chamber is cooled, remove instruments and trays from the autoclave.

9.3.2.4.2 Open the door and apply the non-abrasive chamber cleaner.

9.3.2.4.3 Never use bleach, steel wool, a steel brush, or anything abrasive to scrub or clean the chamber.

9.3.2.4.4 Select and start the steam only cycle, no dry time

9.3.2.4.5 At the end of the exhaust cycle, drain the water from the reservoir.

9.3.2.4.6 Fill the water reservoir with distilled water.

9.3.2.4.7 Repeat a steam sterilization cycle without the chamber cleaner to remove any excess debris in the pipes.

9.3.2.4.8 Select and start the steam only cycle, no dry time

9.3.2.4.9 At the end of the exhaust cycle, drain the water from the reservoir.

9.3.2.4.10 Turn the autoclave off and allow chamber to cool.

9.3.2.4.11 Remove the tray holder frame, rinse, and wipe the interior of the chamber with a damp cloth.

9.3.2.4.12 Fill the reservoir with distilled or purified water

9.3.2.4.13 Remove the tray holder and trays and clean with a detergent or a non-abrasive stainless-steel cleaner and water, using a cloth or sponge. Rinse the tray holder and trays immediately with water to avoid staining the metal.

9.3.3 Monthly

9.3.3.1 Put a few drops of oil on the 2 door pins and door tightening bolt.

9.3.3.2 Clean and check the safety valve.

9.3.3.3 Clean strainer.

9.3.4 Semi-annually—consult the maintenance department before proceeding

9.3.4.1 Replace the air filter as needed.

9.3.4.2 Clean the fan grid with compressed air from the inside outward.

9.3.4.3 Examine and replace the door gasket as needed.

9.4 Sterilization Cycle Printouts/Records

9.4.1 After each sterilization cycle, the printout(s) of each cycle for CSPs sterilized must be attached to the associated formula worksheet.

9.5 Autoclave- Incompatible Materials

9.5.1 There are several materials that should never be placed into the autoclave. A list of known incompatible materials are as followed:

9.5.1.1 Acids, bases and organic solvents.

9.5.1.2 Chlorides and sulfates.

9.5.1.3 Alcohol

9.5.1.4 Seawater.

9.5.1.5 Chlorine, hypochlorite, bleach.

9.5.1.6 Non-stainless steel.

9.5.1.7 Polystyrene (PS).

9.5.1.8 Low-density (LDPE) and high-density polyethylene (HDPE).

9.5.1.9 Polyurethane.

9.5.1.10 Flammable, reactive, corrosive, toxic, or radioactive materials.

9.5.1.11 Paraffin-embedded tissue

5.006 INCUBATORS--USE, CLEANING AND MAINTENANCE

Authorized by: Shibu John, Amelia Yeh **Date: 7-15-2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to outline the use, cleaning and maintenance of incubators at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all aseptic processing and in-house testing personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and ensure personnel training.

4.0 REFERENCES

4.1 Instruction manual

5.0 DEFINITIONS

5.1 LUMAC – Log of Use, Maintenance and Cleaning

5.2 Incubator—an enclosed apparatus providing a controlled temperature.

6.0 FREQUENCY

6.1 Monitoring to be completed once daily during normal business hours while in use.

6.2 Cleaning is to be completed once monthly.

6.3 Calibration verification is to be completed annually or whenever there is a noted temperature shift in the daily monitoring.

6.4 Maintenance must be performed as needed.

7.0 EQUIPMENT & SUPPLIES

7.1 Incubators (2)

7.1.1 Incubator 1: Controlled room temperature 20-25C– Boekel Scientific

7.1.2 Incubator 3: 30-35C – Boekel Scientific

8.0 GENERAL INFORMATION

8.1 Incubators at RX COMPOUNDSTORE are used for incubating media samples of CSPs for in-house testing by aseptic processing personnel during the sterilization step.

8.2 Incubators at RX COMPOUNDSTORE are used for incubating media samples of agar plates for in-house environmental monitoring (EM) and in-house personnel monitoring (PM).

8.2.1 Surface sampling of the controlled environment

8.2.2 Gloved fingertip testing of aseptic processing personnel

9.0 POCEDURE

9.1 Use/Monitoring

9.1.1 Assemble unit as outlined in the instruction manual.

9.1.2 Place unit in a clear, draft free environment.

9.1.3 Ensure that all ventilation holes in the incubator are not blocked.

9.1.4 Turn the "Power" switch to the ON position.

9.1.5 Use the temperature control knob to set the desired temperature.

9.1.6 Calibration/verification must be performed using a non-digital, mercury thermometer. See section 9.2 of this SOP. When placing or removing items the door should not be open for extended periods of time.

9.1.7 A thermometer must be positioned in the geometric center of the incubator.

9.1.8 Optimal temperature range can change depending on the required incubation temperature. The temperature will be verified per the calibration procedure when the set point is changed.

9.1.9 Daily readings must be recorded on the daily temperature log.

9.1.10 If the temperature of the incubator falls out of the optimal temperature range, items must be removed immediately and placed in an alternate drug products incubator. Temperature drop is to be recorded on daily temperature log.

Corrective action is to be taken immediately. Once temperature has reached acceptable range, it is to be recorded on the daily temperature log sheet

9.1.11 Items that are damaged by the variation in temperature must be discarded.

9.1.12 Place the log in the quality assurance file once complete.

9.2 Calibration/Verification

9.2.1 A calibrated thermometer of the proper range must be positioned in the middle of one of the incubator shelves. Allow one hour for the thermometer to equilibrate with the environment.

9.2.2 At the end of the hour, read the thermometer. If the reading does not agree with the temperature desired, adjust the incubator temperature control accordingly.

9.2.3 Allow one hour for the incubator to adjust to the new setting and the thermometer to equilibrate with the environment.

9.2.4 At the end of the hour, read the thermometer. Repeat this process until the desired temperature is achieved.

9.2.5 Readings must be recorded electronically on the temperature log in Simplifi.

9.2.6 Place the log in the quality assurance file once complete.

9.3 Cleaning

9.3.1 NEVER use 70% isopropyl alcohol on the plexiglass doors. It will cause the material of the door to crack. It may be wiped with a lint free towel wetted with distilled water and wiped dry.

9.3.2 The metal exterior can be cleaned using 70% isopropyl alcohol.

9.3.3 Remove any materials that may be harmed by 70% isopropyl alcohol or the temperature change that will occur when the door is open for cleaning.

9.3.4 The interior bottom, sides and shelves of the unit can be cleaned using 70% isopropyl alcohol.

9.3.5 Allow to dry thoroughly before re-starting unit.

9.4 Maintenance

9.4.1 Check circulating fans for excessive noise and buildup of lint on the blades.

9.4.2 Wipe off door gasket and inspect for cracks or defects.

8.4.3 Lubricate door hinges as needed.

5.007 pH METER—USE, CLEANING, AND MAINTENANCE

Authorized by: Shibu John, Amelia Yeh **Date: 7/15/2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to outline the use, calibration, and maintenance of the Apera pH700 benchtop pH meter at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all personnel using the Apera pH700 benchtop pH meter at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) shall supervise this procedure and ensure proper personnel training.

4.0 REFERENCES

4.1 Instruction manual

5.0 DEFINITIONS

5.1 N/A

6.0 FREQUENCY

6.1 Calibration must be performed daily when in use

6.1.1 Recalibration must occur if the unit has been turned off

6.2 Replace the sensor as needed.

7.0 EQUIPMENT & SUPPLIES

7.1 pH buffer 4.0 standard solution

7.2 pH buffer 7.0 standard solution

7.3 pH buffer 10.0 standard solution

7.4 Distilled water

7.5 Lint-free wipes

7.6 70% isopropyl alcohol (IPA)

8.0 GENERAL INFORMATION

8.1 Do not expose the pH meter to direct sunlight.

8.2 Do not use organic solvents to clean the pH meter.

9.0 PROCEDURE

9.1 Operation

9.1.1 Calibration must be performed daily before using the pH meter, or if the unit has been turned off.

9.1.2 Rinse the sensor thoroughly with sterile water before and after testing. Remove the protective screw cap as needed.

9.1.3 Upon completion of pH testing, turn the pH meter off. Rinse the sensor with sterile water.

9.1.4 Refer to the instruction manual as needed

9.2 Calibration

9.2.1 Press the power (on/off) button to turn on or off as needed

9.2.2 Press "CAL/MEAS" button to enter calibration mode.

9.2.3 CAL1 icon will flash in the upper right corner of the LCD. 7.00 pH will flash in the lower right corner of the LCD, reminding you to use pH 7.00 buffer to conduct 1st point of calibration.

9.2.4 Use sterile water to rinse off electrode. Dip it into pH 7.00 buffer solution, stir gently and let it stand still and wait for the reading to become stable. In the lower right corner of LCD, the process of auto recognizing the buffer solution will be displayed. Pressing "ENTER" before the buffer is recognized will generate Er2 (please refer to table 5 in the manual).

9.2.5 When the meter locks 7.00 pH in the lower right corner, stable "SMILEY FACE" icon displays on LCD. Then press "ENTER" key to calibrate the meter. End icon appears after calibration is done. The 1st point calibration is finished.

9.2.5.1 Meanwhile, CAL2 will flash at the upper right corner, and 4.00 pH & 10.01 pH will flash alternately at the bottom right, indicating using pH4.00 or pH10.01 buffer solution to make the 2nd point calibration.

9.2.6 Take out the pH electrode, rinse it in sterile water, dry it, and dip it into pH 4.00 buffer solution. Stir the solution gently and let stand still in the buffer solution until a stable reading is reached. The meter's display will show the recognition process of calibration buffer solution at the lower right corner. When the meter recognizes 4.00 pH, stable "SMILEY FACE" icon displays on LCD. Press "ENTER" key to calibrate the meter. End icon and electrode slope of acidity range will be displayed after calibration is done.

9.2.6.1 Meanwhile, CL3 will flash at the upper right corner of the LCD, and 10.01 pH will flash at the lower right, indicating using pH10.01 buffer solution to make the 3rd point calibration.

9.2.7 Take out pH electrode, rinse it in distilled water, dry it, and dip it into pH 10.01 buffer solution. Stir the solution gently and let it stand still in the buffer solution until a stable reading is reached. The meter's display will show recognition process of calibration buffer solution at the bottom right of LCD. When the meter recognizes 10.01 pH, stable "SMILEY FACE" icon displays on LCD. Press "ENTER" key to calibrate the meter. End icon and electrode slope of alkalinity range display after calibration is done.

9.2.8 The meter returns to the measurement mode, the calibration icons L M H will be displayed. During the calibration process, press "CAL/MEAS" key to exit from the calibration mode.

9.2.9 The meter can perform one-point, two-point and three-point calibration. Calibration guide icons appear on LCD.

9.3 Cleaning and Maintenance

9.3.1 Clean the outside of the pH meter's benchtop unit daily with 70% IPA and a soft cloth to remove any solutions or particulates.

9.3.2 Replace the sensor as needed.

9.3.3 Upon completion of maintenance, and before use, the pH meter must be calibrated.

5.013 DRY HEAT OVEN—USE, CLEANING, MAINTENANCE

Authorized by: Shibu John, Amelia Yeh **Date: 7/15/2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to establish requirements for the use, verification, and maintenance of the Cole Palmer Dry-Heat Oven.

2.0 SCOPE

2.1 This procedure applies to all compounding personnel using the Cole Palmer Dry-Heat Oven at RX COMPOUNDSTORE.

3.0 RESPONSIBILTY

3.1 The Pharmacist-in-Charge (PIC) must supervise this procedure and ensure proper personnel training.

4.0 REFERENCES

4.1 Instruction manual

4.2 SOP 1.040 "Use and Control of LUMACs"

5.0 FREQUENCY

5.1 Initial verification of temperature consistency must be performed and documented on the Cole Palmer Dry-Heat Oven Verification Log (Attachment 1).

5.2 Additional verification must be performed and documented after any significant event (equipment move, major repair, etc.).

6.0 DEFINITIONS

6.1 LUMAC – Log of Use, Maintenance and Cleaning

7.0 EQUIPMENT AND SUPPLIES

7.1 Dry-Heat Oven capable of maintaining a temperature of 250°C for sterilization and depyrogenation

7.2 A non-digital glass or handheld thermometer for calibration.

8.0 GENERAL INFORMATION

8.1 Dry heat sterilization is usually done as a batch process in an oven designed for sterilization. Heated filtered air must be evenly distributed throughout the chamber by a blower device.

8.2 The oven should be equipped with a system for controlling temperature and exposure.

8.3 Sterilization by dry heat requires higher temperatures and longer exposure times than does sterilization by steam.

8.4 Dry heat must be used only for those materials that cannot be sterilized by steam, when either the moisture would damage the material, or the material is impermeable.

8.5 During sterilization sufficient space must be left between materials to allow for good circulation of the hot air.

8.6 The dry heat sterilization conditions and durations for specific CSPs must be included in written documentation in the CSP formula.

8.7 The effectiveness of dry heat sterilization must be verified using appropriate Bis of bacillus subtilis and other confirmation methods such as temperature sensing devices and sterility tests.

8.8 Personnel involved in terminal sterilization via the use of a dry-heat oven should be thoroughly familiar with the sterilization process and the equipment involved. Personnel are responsible for:

8.8.1 Establishing that the equipment is capable of operating within the required parameters.

8.8.2 Establishing that dry-heat sterilization is appropriate for the products to be sterilized.

8.8.3 Conducting replicate cycles employing actual or simulated product and demonstrating the success of the procedure.

8.8.4 Monitoring the process during routine operation.

8.8.5 Completing all documentation.

9.0 PROCEDURE

9.1 Use

9.1.1 Turn the unit on using the rocker switch.

9.1.2 Entering a Display Offset

9.1.2.1 Press MENU, the display indicates CAL.

9.1.2.2 Press and hold the SET key to view the present offset value.

9.1.2.3 To change the display offset, press and hold the SET key. Press INCREASE or DECREASE until the display indicates the desired offset.

9.1.2.4 Release the SET key.

9.1.2.5 Press MENU once to return to normal temperature control.

9.1.3 Prior to use, place a thermometer in the chamber so that it can be externally read and turn on the oven to the desired temperature. Allow sufficient time for the temperature to be reached. Do not depend upon the oven dial to set the temperature.

9.1.4 When preparing the product for dry-heat sterilization, if a liquid (such as oil) is being sterilized, prepare a container of the liquid and place in the oven chamber so that the thermometer can be inserted into the liquid and externally read (generally, the liquid should be in the center of the oven).

9.1.5 Place the items to be sterilized in the oven, evenly distributed with ample space for heated airflow between them.

9.1.6 Close the door and observe the temperature on the thermometer placed in the liquid. Start timing for the sterilizing process only after the desired temperature has been reached in the liquid in which the thermometer is placed.

9.1.7 Continue the sterilization process until the complete time has elapsed.

9.1.8 Turn off the heat and allow the oven to cool.

9.1.9 Open the door and remove the items.

9.1.10 Clean the oven and close the door.

9.2 Verification

9.2.1 Empty-Chamber Verification

9.2.1.1 Prior to use, place a thermometer in the chamber so that it can be externally read and turn on the oven to the desired temperature. Allow sufficient time for the temperature to be reached.

9.2.1.2 After the temperature is reached, record the temperature on the Cole Palmer Dry-Heat Oven Verification Log (Attachment 1) at 15-minute intervals for a minimum of 2 hours.

9.2.1.3 Turn the oven off and allow it to cool down.

9.2.1.4 Complete the Cole Palmer Dry-Heat Oven Verification Log (Attachment 1).

9.2.2 Filled-Chamber Verification

9.2.2.1 Prepare a container with simulated product, place a thermometer in the simulated product so that it can be externally read and seal the container with aluminum foil.

9.2.2.2 Place the sealed container in the center of the oven chamber and turn on the oven to the desired temperature.

9.2.2.3 After the temperature is reached, record the temperature on the Cole Palmer Dry-Heat Oven Verification Log (Attachment 1) at 15-minute intervals for a minimum of 2 hours.

9.2.2.4 Turn the oven off and allow it to cool down.

9.2.2.5 Open the door and remove the items.

9.2.2.6 Complete the Cole Palmer Dry-Heat Oven Verification Log (Attachment 1).

9.3 Cleaning/Maintenance

9.3.1 The exterior of the oven can be kept clean by periodically wiping with a cloth dampened with purified water or alcohol.

9.3.2 Clean immediately if soiling or leakage of product occurs.

9.3.3 Perform maintenance as required per equipment manual.

9.3.3.1 Replace the door gasket, hinges, and/or handle as needed.

9.3.4 When not in use, the oven must remain off.

9.4 All pertinent information must be documented in the appropriate equipment LUMAC.

10.0 ATTACHMENTS

5.017 Monitoring Device Certification

Authorized by: Amelia Yeh **Date Effective: 7/14/2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to ensure all environmental and equipment monitoring devices used at RX COMPOUNDSTORE are properly certified, calibrated, and maintained to guarantee accuracy and compliance with applicable regulatory standards

2.0 SCOPE

2.1 This procedure applies to all personnel responsible for monitoring, using, or maintaining temperature, pressure, particle count, and other environmental monitoring devices at RX COMPOUNDSTORE..

3.0 RESPONSIBILITY

3.1 The Pharmacist in Charge (PIC) must supervise this procedure and is responsible for personnel training and documentation review.

3.2 Designated QA staff are responsible for ensuring calibration records are maintained and devices are serviced per the required schedule.

4.0 REFERENCES

4.1 USP Current Version <795> "Pharmaceutical Compounding – Nonsterile Preparations"

4.2 USP Current Version <797> "Pharmaceutical Compounding – Sterile Preparations"

4.3 USP Current Version <800> "Safe Handling of Hazardous Drugs in the Healthcare Setting"

4.4 NIST Calibration Standards

5.0 DEFINITIONS

5.1 Calibration – The comparison of a measurement device to a known standard to ensure accuracy.

5.2 NIST – National Institute of Standards and Technology; provides traceable standards for calibration.

6.0 FREQUENCY

6.1 Calibration must be performed at least annually or per manufacturer's specifications.

6.2 Certification must be obtained upon new equipment installation and retained thereafter.

6.3 Out-of-specification devices must be removed from use immediately, and recalibrated before being returned to service.

6.4 Device inventory should be reviewed quarterly to verify certification status.

7.0 EQUIPMENT & SUPPLIES

7.1 Monitoring devices (e.g., temperature probes, pressure gauges, particle counters)

7.2 Calibration certificates

7.3 Device inventory log

7.4 Third-party calibration vendor contact information

8.0 GENERAL INFORMATION

8.1. Only certified and calibrated monitoring devices may be used for any activity that involves environmental or product monitoring.

8.2. Certification must be traceable to a national standard (e.g., NIST).

9.0 PROCEDURE

9.1 Device Certification and Calibration

- 9.1.1 Maintain an inventory of all monitoring devices, including serial numbers, locations, and calibration due dates.
- 9.1.2 Each device must have a valid calibration certificate on file, issued by a qualified vendor.
- 9.1.3 Upon receipt of a new device, confirm the device is calibrated and certified before use.
- 9.1.4 When calibration is due, schedule service with a qualified calibration vendor.
- 9.1.5 Calibration certificates must indicate:
  - 9.1.5.1 Device identification
  - 9.1.5.2 Calibration date
  - 9.1.5.3 Calibration results
  - 9.1.5.4 Technician name
  - 9.1.5.5 Traceable standard used
- 9.1.6 File certificates in the designated quality assurance system and update the device inventory log.

9.2 Handling Out-of-Tolerance Devices

- 9.2.1 Devices showing erratic or out-of-range readings must be removed from service immediately.
- 9.2.2 Label as "Out of Service – Do Not Use" until calibration is completed.
- 9.2.3 Investigate any impact the inaccurate readings may have had on product integrity.
- 9.2.4 Document corrective actions taken.

9.3 Periodic Review and Documentation

- 9.3.1 Device calibration due dates must be reviewed at least quarterly.
- 9.3.2 Maintain a log of all calibration events, including due dates and results.
- 9.3.3 Retain all calibration and certification records for a minimum of three years.

6.003 ADVERSE EVENTS REPORTING

Authorized by: Shibu John, Amelia Yeh **Date Effective: 7/14/2025**

1.0 PURPOSE

1.1 The purpose of this standard operating procedure (SOP) is to provide guidance on adverse events associated with the quality of a compounded sterile preparation (CSP) or compounded nonsterile preparation (CNSP) prepared by RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge or the Quality Control Officer shall supervise this procedure and ensure proper personnel training and compliance.

3.2 All personnel at RX COMPOUNDSTORE are responsible for following this procedure.

7.0 EQUIPMENT & SUPPLIES

7.1 N/A

8.0 GENERAL INFORMATION

8.1 FDA. What is a Serious Adverse Event? 2/1/16. Retrieved on 04-15-2021.

8.1.1 An adverse event is any undesirable experience associated with the use of a medical product in a patient. The event is serious and should be reported to FDA when the patient outcome is:

8.1.1.1 Death

8.1.1.1.1 Report if you suspect that the death was an outcome of the adverse event and include the date if known.

8.1.1.2 Life-threatening

8.1.1.2.1 Report if suspected that the patient was at substantial risk of dying at the time of the adverse event or use or continued use of the device or other medical product might have resulted in the death of the patient.

8.1.1.3 Hospitalization (initial or prolonged)

8.1.1.3.1 Report if admission to the hospital or prolongation of hospitalization was a result of the adverse event.

8.1.1.3.2 Emergency room visits that do not result in admission to the hospital should be evaluated for one of the other serious outcomes (e.g., life-threatening; required intervention to prevent permanent impairment or damage; other serious medically important event).

8.1.1.4 Disability or Permanent Damage

8.1.1.4.1 Report if the adverse event resulted in a substantial disruption of a person's ability to conduct normal life

functions, i.e., the adverse event resulted in a significant, persistent, or permanent change, impairment, damage or disruption in the patient's body function/structure, physical activities and/or quality of life.

8.1.1.5 Congenital Anomaly/Birth Defect

8.1.1.5.1 Report if you suspect that exposure to a medical product prior to conception or during pregnancy may have resulted in an adverse outcome in the child.

8.1.1.6 Required Intervention to Prevent Permanent Impairment or Damage (Devices)

8.1.1.6.1 Report if you believe that medical or surgical intervention was necessary to preclude permanent impairment of a body function, or prevent permanent damage to a body structure, either situation suspected to be due to the use of a medical product.

8.1.1.7 Other Serious (Important Medical Events)

8.1.1.7.1 Report when the event does not fit the other outcomes, but the event may jeopardize the patient and may require medical or surgical intervention (treatment) to prevent one of the other outcomes. Examples include allergic bronchospasm (a serious problem with breathing) requiring treatment in an emergency room, serious blood dyscrasias (blood disorders) or seizures/convulsions that do not result in hospitalization. The development of drug dependence or drug abuse would also be examples of important medical events.

8.2 Additional Resources

8.2.1 Report a Serious Medical Product Problem Online

8.2.2 Report Dietary Supplements and Tobacco Product Problems Online

8.2.3 Form FDA 3500 - Voluntary Reporting

8.3 Adverse events may or may not occur because of an error.

8.4 A preventable adverse event is described as an adverse event where the care falls below the standard expected or that results from an error or systems failure.

8.5 As it relates to sterile compounding, any adverse events associated with the quality of a CSP should be reported to the applicable regulatory body, such as the State Board of Pharmacy, State Department of Health, the FDA MedWatch Program for Human Drugs, or use of the FDA Form 1932a for animal drugs, in keeping with RX COMPOUNDSTORE's risk management SOPs (not included in the Sterile Compounding SOP and Form Templates).

8.6 Adverse events are likely to be reported to RX COMPOUNDSTORE as a complaint from a physician, nurse, patient, or family and are handled according to SOP 6.009 Customer Complaints.

8.7 As a result, the investigation into the root cause of the adverse event is performed according to SOP 6.017 Corrective Action and Preventive Action and recalls are performed according to SOP 6.015 Recalls and Quarantine and Audit Trail.

9.0 PROCEDURE

9.1 Action to be taken for potential adverse event

9.1.1 The person who receives the notification of a possible adverse event completes the F6.009.1 *Customer Complaint Form.*

9.1.2 Since these types of complaints are considered quality-related (not service-related), the Designated Person is notified immediately.

9.1.3 The Designated Person (who may be part of the quality group) reviews the complaint and initiates a *CAPA Plan; F.6.017.1*

9.1.4 If it is determined from the CAPA plan that a recall is required, See SOP 6.015 Recalls and Quarantine and Audit Trail.

9.1.5 Report the adverse event to the applicable regulatory body by completing the appropriate form.

9.1.6 Within 24 hours of notification of a potential adverse event, RX COMPOUNDSTORE:

9.1.6.1 determines if the potential adverse event is applicable to other CSPs produced for its customers; and

9.1.6.2 determines what level of recall action needs to be taken

9.1.7 RX COMPOUNDSTORE immediately notifies the prescribers who serve patients receiving CSPs related to the potential adverse event.

9.1.8 Adverse Events related to vaccine administration must be reported to: Vaccine Adverse Event Reporting System (VAERS) at: www.vaers.hhs.gov

9.1.8.1 Patients must be instructed to

9.1.8.1.1 Contact their healthcare provider

9.1.8.1.2 Report the Adverse Event using VAERS online form or the downloadable pdf form

9.1.9 Vaccination errors must be reported to the Institute for Safe Medicine via Vaccination Error Reporting Program (VERP).

9.1.9.1 The reporting system asks for detailed information about the occurrence, including:

9.1.9.1.1 A description of what went wrong

9.1.9.1.2 Identification of any known causes or contributing factors

9.1.9.1.3 How the event was discovered or intercepted

9.1.9.1.4 Outcome for patient(s) involved

9.2 Documentation Elements

9.2.1 Each patient affected will have a separate CAPA plan completed.

9.2.2 Any remediation of personnel or changes in practice due to the outcome of the investigation and taken to prevent future occurrences are to be documented.

6.006 POTENCY, STABILITY AND BEYOND-USE DATING TESTING FOR COMPOUNDED PREPARATIONS

Authorized by: Shibu John, Amelia Yeh **Date: 7/14/2025**

1.0 PURPOSE

1.1 The purpose of the standard operating procedure (SOP) is to describe the general procedure for testing compounded preparations for potency and stability at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to compounding personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and is responsible for employee training.

4.0 REFERENCES

4.1 USP Current Version <795> "Pharmaceutical Compounding – Nonsterile Preparations"

4.2 USP Current Version <797> "Pharmaceutical Compounding – Sterile Preparations"

4.3 USP Current Version <800> "Safe Handling of Hazardous Drugs in the Healthcare Setting"

4.4 SOP 4.030 Deviations

5.0 DEFINITIONS

5.1 BUD—Beyond Use Date-Either the date, or the hour and date, after which a CSP must not be used. The BUD is determined from the date and time that the preparation initiated. Applies to all compounded preparations.

5.2 CSP—Compounded Sterile Preparation

5.3 CNSP—Compounded Nonsterile Preparation

5.4 QM—Quality Management

6.0 FREQUENCY

6.1 Ongoing as needed for stability testing of non-sterile compounded preparations

7.0 EQUIPMENT & SUPPLIES

7.1 Appropriate reference materials—Formula worksheet, Compounding Record, Master Formulation Record

7.2 Prescription Data Reports from pharmacy software

7.3 Submission Forms

7.4 Third-Party testing lab(s)

- 7.4.1 ARL—Analytical Research Labs, Oklahoma City, OK
- 7.4.2 Eagle—Analytical testing lab in Houston, TX
- 7.4.3 CIAL—Compounders International Analytical Lab in Castle Rock, CO
- 7.4.4 DynaLabs—Analytical testing of compounded preparations in St. Louis, MO

8.0 GENERAL INFORMATION

8.1 Each CSP label must state the date, or the hour and date, beyond which the preparation must not be used and must be discarded. This is the BUD

8.2 The BUD is the date after which a compound preparation must not be used and is determined from the date when the preparation is compounded.

8.3 Compounded preparations are intended for administration immediately or following short term storage, their BUDS are assigned based on criteria different from those applied to assigning expiration dates to manufactured products.

8.4 BUDs must be assigned conservatively.

8.5 Compounding personnel who assigned BUDs to CSPs when lacking direct chemical assay results must critically interpret and evaluate the most appropriate available information sources to determine a conservative and safe BUD.

8.6 When assigning a BUD, compounding personnel must consult and apply all drug specific and general stability documentation and literature when available and should consider:

8.6.1 the nature of the drug and its degradation mechanism

8.6.2 the dosage form and its components

8.6.3 the potential for microbial proliferation in the preparation

8.6.4 the container in which it's packaged

8.6.5 the expected storage conditions

8.6.6 the intended duration of therapy

8.7 When a manufactured product is used as a source of the API for a nonsterile compounded preparation, the product expiration date cannot be used solely to assign A BUD for the compound preparation. Instead, the compounder must refer to the manufacturer for stability information and to the literature for applicable information on stability, compatibility, and degradation of ingredients; must consider stability factors as outlined in USP Chapter <1191>; And must use his or her compounding education and experience.

8.8 All stability data must be carefully interpreted in relation to the actual compound formulation.

8.9 At all steps in the compounding, dispensing, and storage process, compounding personnel must observe the compounded drug preparation for signs of instability.

8.10 For specific details of some of the common physical signs of deterioration see USB chapter <1191> Observing Products for Evidence of Instability.

8.9.1 it must be understood that excessive chemical degradation and other drug concentration loss due to reactions maybe invisible more often than visible.

9.0 PROCEDURE

9.1 In the *absence of stability information* that is applicable to a specific drug and preparation, the following criteria presents maximum BUDs recommended for compounded nonsterile preparations that are packaged in tight, light resistant containers and stored at controlled room temperature, unless otherwise indicated. Drugs or chemicals known to be the label to decomposition will require shorter BUDs.

9.1.1 For Non-Aqueous Formulations: The BUD is not later than the time remaining until the earliest expiration date of any API or six months, whichever is earlier.

9.1.2 For Water-Containing Oral Formulations: The BUD is not later than 14 days when stored at controlled room temperature. (20--25°C)

9.1.3 For Water-Containing Topical/Dermal and Mucosal Liquid and Semisolid Formulations: The BUD is not later than 30 days

9.2 Susceptible preparation should contain suitable antimicrobial agents to protect against bacteria, yeast, and mold contamination inadvertently introduced during or after the compounding process. When antimicrobial preservatives are contraindicated in such

compounded preparations, storage of the preparation at controlled cold temperature is necessary.

9.2.1 Appropriate patient instruction and consultation is essential to ensure proper storage and handling of such compound in preparations by the patient or caregiver.

9.2.2 Anti-microbial preservative should not be used as a substitute for good compounding practices.

9.2.3 Assurance of sterility in a compounded sterile preparation is mandatory. Compounding and packaging of sterile drugs requires strict adherence to guidelines presented in USP chapter <797> and in the manufacturers labeling instructions.

9.3 BUDs for compounded preparations are usually assigned based on professional experience, which should include careful interpretation of appropriate information sources for the same or similar formulations. See Stability Criteria and Beyond-Use Dating under Pharmaceutical Compounding-- Non-sterile Preparations USP chapter <795>.

9.4 The majority of CSPs are aqueous solutions in which hydrolysis of dissolved ingredients is the most common chemical degradation reaction. The extent of hydrolysis and other heat catalyzed degradation reactions at any time point in the life of the CSP represents the thermodynamic some of the exposure temperatures and durations.

9.4.1 Personnel who prepare, dispense, and administer CSPs must store them strictly in accordance with the conditions stated on the label of ingredient products and finished CSPs. When CSPs are known to have been exposed to temperatures warmer than the warmest labeled limit or to temperatures exceeding 40 degrees C for more than four hours such CSP should be discarded unless direct assay data or appropriate documentation confirms their continued stability.

9.5 BUD's and expiration dates are not the same. Expiration dates are for the chemical and physical stability of manufactured products determined from results of rigorous analytical and performance testing, and they are specific for a particular formulation in its container an at stated exposure conditions of illumination and temperature.

9.5.1 When CSPS deviate from conditions in the approved labeling of manufactured products contained in CSPS, compounding personnel may consult the manufacturer of products for advice on assigning beauties based on chemical and physical stability parameters.

9.5.2 BUD's for CSP's that are prepared strictly in accordance with manufacturers product labeling must be those specified in the labeling or from appropriate literature sources or direct testing. BUDS for CSP's that lack justification from either appropriate literature sources or by direct testing evidence must be assigned as described in Stability Criteria and Beyond-Use Dating under Pharmaceutical Compounding—Non-sterile Preparations USP chapter <795>.

9.5.3 Compounding personnel may refer to applicable publications to obtain relevant stability, compatibility, degradation information regarding the drug or its congeners.

9.6 When assigning BUDs, compounding personnel should consult and apply drug specific and general stability documentation and literature where available and they should consider the nature of the drug and its degradation mechanism, the container which is packaged, the expected to storage conditions, and the intended duration of therapy.

9.7 Stability information must be carefully interpreted in relation to the actual compound formulation and conditions for storage and use.

9.8 Stability testing provides the pharmacy the ability to accurately assign beyond-use-dates/ expiration dates to compounded medications. When testing for stability, both strength and stability can be determined, but not all strength testing can determine stability.

9.9 Stability testing includes method development, method validation, and a stability study.

9.10 Stability is the extent to which a product remains, within specified limits and throughout its period of storage and use, the same properties and characteristics that is possessed at the time of compounding.

9.11 Time intervals for testing should be initially, 14 days, 30 days, 60 days, 90 days and finally 180 days until or unless failed.

9.12 The sample to be tested must be submitted in the final dispensing container or a container of the same material.

- 9.12.1 Each dosage form made at RX COMPOUNDSTORE should be submitted for testing
- 9.12.2 Each compounder at RX COMPOUNDSTORE should prepare testing samples of various dosage forms to validate processes
- 9.12.3 Samples to be tested should be tested at intervals of initially, followed by every three months for one year for each compounder and dosage form.
  - 9.12.3.1 RX COMPOUNDSTORE's QM Team must determine which preparations, dosage forms, and which personnel are to be tested so that all dosage forms and each compounder are tested annually.
    - 9.12.3.1.1 A report of RX COMPOUNDSTORE's most frequently compounded preparations must be run every six months.
    - 9.12.3.1.2 Approximately twenty percent of the most frequently compounded preparations must be tested over the next six-month period.
    - 9.12.3.1.3 QM must ensure that each compounder is tested on each dosage form at least annually validating both processes and personnel at RX COMPOUNDSTORE.

9.13 Samples to be tested must be stored and tested under the same storage conditions for dispensation and that will protect the preparation.

- 9.13.1 Storage conditions to be considered—light protective, refrigerated, frozen, room temperature, etc.

9.14 Testing results must be reviewed by a pharmacist and any changes in formulation needed, implemented.

9.15 Highest risk preparations are preservative free and/or sterilized via filtration.

9.16 In the absence of stability information, the following guidelines set forth in USP Chapter <795> must be followed.

- 9.16.1 Beyond-Use Dates (BUDs) should be assigned conservatively. When assigning a BUD, compounders must consult USP Chapter <795> and apply drug-specific and general stability documentation and literature and should consider the following.
  - 9.16.1.1 The nature of the drug and its degradation mechanism
  - 9.16.1.2 The dosage form and its components
  - 9.16.1.3 The potential for microbial proliferations in the preparation
  - 9.16.1.4 The container in which it is packaged
  - 9.16.1.5 The expected storage conditions
  - 9.16.1.6 The intended duration of therapy

9.16.2 When a manufactured product is used as the source of the API for a nonsterile compounded preparation, the product expiration cannot be used solely to assign a BUD for the compounded preparation. The following must be considered.
- 9.16.2.1 Manufacturer stability information
- 9.16.2.2 Literature for applicable stability information
- 9.16.2.3 Compatibility and degradation of ingredients
- 9.16.2.4 Stability factors in USP Chapter <1191>
- 9.16.2.5 Professional judgement

9.16.3 All stability data must be carefully interpreted in relation to the actual compounded formulation.

9.16.4 BUD by type of formulation.
- 9.16.4.1 Non-aqueous formulations--the BUD is not later than the time remaining until the earliest expiration date of any API or 6 months whichever is earlier
- 9.16.4.2 Water-containing oral formulations—the BUD is not later than 14 days when stored at controlled cold temperature
- 9.16.4.3 Water-containing topical/dermal and mucosal liquid and semisolid formulation—The Bud is not later than 30 days.

9.16.5 Extension of a beyond-use date is supported by the following.
- 9.16.5.1 Method Suitability Test
- 9.16.5.2 Container Closure Integrity Test
- 9.16.5.3 Stability Studies

9.16.6 Shorter dating must be used if it is deemed appropriate in the professional judgment of the responsible pharmacist.

6.015 AUDIT TRAIL AND RECALL OF COMPOUNDED PREPARATIONS

Authorized by: Shibu John, Amelia Yeh
Date: 7/15/2025

1.0 PURPOSE

1.1 The purpose if this standard operating procedure (SOP) is to establish requirements for recalling a conventionally manufactured drug product or a compounded preparation that is defective or otherwise unsafe at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all compounding personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and ensure proper personnel training.

3.1.1 The Quality Management Team (QMT) is responsible for developing and implementing the recall process.

3.1.2 A Designated Person is responsible for notifying prescribers and patients about recalls.

3.1.3 The Director of Operations is responsible for handling customer inquiries regarding recalls.

3.1.4 The Quality Manager is responsible for the physical handling of recalled products or preparations.

4.0 REFERENCES

4.1 N/A

5.0 DEFINITIONS

5.1 A recall of a commercial product is a notification issued when a product does not comply with the Food and Drug act or code of Federal Regulations. Recalls involving misbranded or adulterated products may include the physical removal of the marketed product by the manufacturer.

5.2 A recall of a compounded preparation is a notification issued when a preparation poses a safety risk or fails to meet minimum standards. Decisions regarding the recall of compounded preparations are made by the PIC and/or Quality Management Team (QMT).

6.0 FREQUENCY

6.1 As needed

7.0 EQUIPMENT & SUPPLIES

7.1 RX COMPOUNDSTORE pharmacy software's report or audit of formulations and prescriptions

7.2 Formulation compounding worksheet

7.3 Test results from third party laboratory (if applicable)

7.4 Product samples

7.5 In-house testing kits (if applicable)

7.6 Applicable records (lot numbers, facility name, patient names, etc.)

8.0 GENERAL INFORMATION

8.1 Th intention of recalling potentially harmful products or preparations is to protect consumers from harm and to maintain the integrity of RX COMPOUNDSTORE's reputation.

8.2 All employees who are involved in the recall process must be trained on this SOP.

8.3 The recall process must be executed in a timely and efficient manner.

8.4 The recall process should be audited annually to ensure it is effective and efficient

8.5 The product manufacturer, in cooperation with the FDA, usually initiates a product recall. The FDA has no authority to initiate or order a recall of a compounded preparation, however, it can request a firm to recall a product. The FDA has established guidelines for manufacturers to follow in recalling distributed products. The guidelines categorized all recalls into one of three classes according to the level of hazard involved. The classes are as follows:

8.5.1 Class 1: dangerous and effective products that predictably could cause serious health problems or death. Examples of products that could fall into this category or label mix up on a lifesaving drug or a defective artificial heart valve.

8.5.2 Class 2: products that might cause a temporary health problem or pose only a slight threat of a serious nature. An example is a drug that has less potency than stated but is not used to treat life threatening situations.

8.5.3 class 3: products that are unlikely to cause any adverse health reactions but violate FDA regulations. An example is a bottle of aspirin that contains 90 tablets instead of 100 as stated on the label.

8.6 RX COMPOUNDSTORE may initiate an internal recall to remove from use conventionally manufactured products if it is deemed necessary. An example of an internal recall is a problem that has been reported involving a specific lot of components used in a finish compound in preparation, an RX COMPOUNDSTORE has determined the facility should not use the product even though the manufacturer has not initiated a recall.

8.7 Depending on the type of class of recall, the action level may be:

8.7.1 Wholesale or distributor only: not applicable to RX COMPOUNDSTORE; No action necessary.

8.7.2 Retail: applicable to RX COMPOUNDSTORE facility; Action required to remove any affected products from facility inventory.

8.7.3 Hospital: applicable to RX COMPOUNDSTORE facility; Action necessary to remove any affected product from facility inventory or administration offices.

8.8 An audit trail is necessary in the event of a recalled compounded preparation.

8.8.1 All compounded preparations are traced with a prescription number.

8.8.2 Formulas used for prescription compounding are traced with a lot number

9.0 PROCEDURE

9.1 Any personnel who become aware of a defective component or unsafe product/preparation must immediately report it to their supervisor.

9.1.1 Any employee who fails to report a defective component or unsafe product/preparation may be subject to disciplinary action.

9.2 Upon notification of a manufacturer recall, take appropriate action to remove the items from inventory. Also, remove any finished CPs stored at RX COMPOUNDSTORE or delivered and stored at other locations such as patient homes or offices where CPs are administered.

9.3 Check all incoming inventory related to the recall for the next 30 days from the date of the initial recall notice to ensure affected lot numbers are not brought back into inventory.

9.4 Place recalled items into the "Quarantine Area". Label any quarantine product clearly and conspicuously with the following message: Recalled Product: DO NOT USE."

9.5 As directed by the QMT of RX COMPOUNDSTORE, retrieve all recalled items from RX COMPOUNDSTORE inventory in any finished CPS that contain recalled component from finished RX COMPOUNDSTORE inventory awaiting delivery or any finished CPs already delivered to patient locations and awaiting use with patient. Inspect all records created since the recalled item was received. Those records may include but not limited to:

9.5.1 compounding documents including compounding record, master formulation record, prescription or orders,

9.5.2 inventory forms

9.5.3 shipping and delivery tickets

9.5.4 equipment maintenance logs

9.5.5 equipment validations

9.5.6 environmental monitoring records

9.6 Hold recalled items for return to manufacturer for vendor for credit, replacement, or disposal according to manufacturer or vendor or RX COMPOUNDSTORE instruction

9.7 Recall notices are signed and dated with quantity and lot number and documentation of action taken.

9.8 Recall notices received for products not in use at RX COMPOUNDSTORE bear a note directly on the recall notice that all inventory was examined, and recall is not applicable.

9.9 Retain recall notices of all inventories that applied to RX COMPOUNDSTORE inventory used.

9.10 RX COMPOUNDSTORE maintains a recall file where notices and documentation of action taken are filed in chronological order period

9.10.1 Recall Plan documents the steps taken in the event of a recall

9.10.2 Recall Notice notifies customers of the recall

9.10.3 Return Tracking documents the return and quarantine of recalled products

9.11 In the event of a recall for compounded preparations, the Quality Manager must investigate the preparation in question and determine the scope of the recall.

9.11.1 Identify the problem

9.11.2 Assess the risk

9.11.3 Determine course of action

9.11.4 Determine the scope of the recall

9.11.5 Notify consumers

9.11.6 Retrieve and quarantine affected products

9.11.7 Investigate probable cause

9.11.8 File report with appropriate agencies and cooperate fully

9.11.9 Dispose of affected products appropriately

9.12 The following documentation must be completed and maintained for all recalls

9.12.1 A copy of the recall notice

9.12.2 A list of all consumers who were notified of the recall

9.12.3 A record of customer inquiries regarding the recall

9.12.4 A record of all the recalled units of preparation that were returned to RX COMPOUNDSTORE

9.13 A positive sterility test unit or exceeded endotoxin levels immediately trigger the following actions:

9.13.1 Notation of critical identifying data such as:

9.13.1.1 Date positive sterility tests or exceeded endotoxin levels were observed

9.13.1.2 Type of test performed

9.13.1.3 The type of media that demonstrated growth

9.13.1.4 Date affected batch and lot was prepared

9.13.1.5 Assigned lot number

9.13.1.5.1 Released or the total batch units put into inventory to be dispensed

9.13.1.5.2 not released

9.13.1.6 Name of RX COMPOUNDSTORE management team member notified

9.13.1.7 Time and date of notification of RX COMPOUNDSTORE management team member

9.13.2 The required action steps are also documented and include:

9.13.2.1 The affected lot record is removed from where it is filed and reviewed.

9.13.2.2 Units from the affected lot still located in RX COMPOUNDSTORE internal unreleased inventory are located, counted, and quarantined.

9.13.2.3 Any of the affected lot that was destroyed due to in-house expiry are identified, if applicable.

9.13.2.4 Accounting for the total number of units in the affected lot is mandatory.

9.13.2.4.1 The number of units affected in the lot placed in inventory equals the sum of the number of units in RX COMPOUNDSTORE inventory plus number of units dispensed to patients plus number of units destroyed due to expiry.

9.14 Next, if any CSPs have been dispensed, each affected patient and their prescriber must be notified of the required recall. RX COMPOUNDSTORE works to ensure the following steps are completed:

9.14.1 Identification of the specific patients to whom the affected lot was dispensed immediate quarantine of unused inventory still present at RX COMPOUNDSTORE, administration office, or patient home

9.14.2 Identification of the number of CSP units in question at each patient received

9.14.3 Any entity in possession of the affected lot is advised not to destroy the preparation.

9.14.4 Clients including prescribers, patients, caregivers shall be advised that the affected sterility test samples were sent for microbiological examination by an independent lab.

9.14.4.1 Clients should be reminded about the extensive environmental sampling program; Personnel training and competency evaluation, and strict hand hygiene, garbing, cleaning, and staging practices employed at RX COMPOUNDSTORE.

9.14.5 RX COMPOUNDSTORE will immediately replace the recalled CSP inventory with inventory made from unaffected components. The goal is to avoid disruption of treatment to patients receiving therapy.

9.14.5.1 Documentation for replacement inventory must be such that clients are not double billed.

9.14.6 All information collected during the investigation is documented as part of the CAPA plan.

9.14.7 RX COMPOUNDSTORE shall contact the prescribers who wrote the prescription for patients identified at risk. The prescribers are informed regarding the positive sterility tests or exceeded endotoxin levels and asked to advise RX COMPOUNDSTORE if the patient is exhibiting any signs or symptoms of infection or fever that may be related to the recall.

9.14.8 A final disposition report, including any impacted patients, is documented as part of the CAPA plan.

9.14.9 Additionally, the following activities must occur immediately after identification of the positive sterility test unit or exceeded endotoxin results, while awaiting results from the microbiological examination:

9.14.9.1 a review of cleaning, surface sampling, viable air sampling, and temperature and pressure monitoring documentation is completed by RX COMPOUNDSTORE's sterile department manager or QM to identify potential adverse trends or instances where practice deviated from facility SOPs

9.14.9.2 if any instances are identified where SOPs and performance deviate, appropriate remediation in terms of additional staff training, competency measurement, and observation is initiated

9.14.9.3 if any situation is identified where the physical facility is not operating as designed, appropriate action is taken and documented.

9.14.9.4 A thorough monthly cleaning of the entire clean room facility is performed and documented.

9.14.9.5 Basic competencies of the person who compounded the lot in question must be reviewed, measured, and verified by the Sterile Department Manager and documented.

9.15 If a compounded preparation is suspected or confirmed to have caused patient harm, was compounded incorrectly, or needs to be recalled for any other reason, all prescribers, facilities and/or patients that received the preparation must be notified immediately.

9.16 A comprehensive list of all lot numbers affected shall be retrieved using all available data devices (formulation records, testing results, retained samples, hard copy files, Pharmacy Software, etc.).

9.17 The nature of the recall shall be explained by the Pharmacist-in-charge or applicable designee and a request will be made to check the affected lot numbers.

9.18 A comprehensive list of all lot numbers and other identifiable data shall be used to determine the reach of the recall. All data sources available shall be used (e.g., software, formulation records, testing results, retained samples, hard copy files, etc.) All facilities and/or patients that received the recall item must be notified immediately and the nature of the recall shall be explained. This contact must be documented.

9.19 A formal recall letter shall be written, detailing the nature of the recall, affected lot numbers, and dates of dispensing to the facility and/or the patient. <See F.1.009.1 Recall Letter Template>

9.20 The Pharmacist-in-charge or designated person shall ensure that all preparations that were dispensed are accounted for and/or that no harm was done to patients. The Pharmacist-in-charge or designee shall complete the recall record.

9.21 RX COMPOUNDSTORE will require all recalled preparations be returned to RX COMPOUNDSTORE via prepaid delivery devices.

9.22 All recalled products and/or preparations shall be accounted for and documented.

9.23 Upon receipt of recalled product, RX COMPOUNDSTORE will quarantine the product for further analytical testing and evaluation of process malfunctions.

9.24 Any deficiencies shall be addressed, problems shall be resolved and/or investigated, and a formal explanation of the outcome of the recall will be documented.

9.25 Any training and/or education required to prevent process deficiencies from occurring in the future will be initiated immediately.

9.26 A copy of the investigation, the recall letter, quarantine records and distraction records shall be filed along with the recall records in a quality assurance file.

9.27 Documentation Elements

9.27.1 F.6.025.1 Recall Form

9.27.2 Each patient affected will have a separate CAPA plan completed

9.27.3 Each prescriber would receive a recall letter if RX COMPOUNDSTORE was required to retrieve any CP or CSP from their location

9.27.4 Any remediation of personnel or changes in practice due to the outcome of the investigation and taken to prevent future positive sterility tests or exceeded endotoxin level current is already documented.

6.019 INCIDENT REPORTING

Authorized by: Shibu John, Amelia Yeh **Date: 7-15-2025**

1.0 PURPOSE

1.1 The purpose of the standard operating procedure (SOP) is to describe the general procedure for reporting incidents at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 All personnel are responsible for being able to recognize, handle, and document any incidents at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and is responsible for employee training.

4.0 REFERENCES

4.1 N/A

5.0 DEFINITIONS

5.1 Incident—any unforeseen and inappropriate event

5.2 CAPA—Corrective And Preventative Action

5.3 Corrective Action—action taken to eliminate the causes of an existing nonconformity, defect, or other undesirable situation to prevent recurrence.

5.4 Preventative Action—Action taken to eliminate the cause of potential nonconformity, defect or other undesirable situation in order to prevent its occurrence.

5.4.1 Preventative action is taken to prevent occurrence whereas corrective action is taken to prevent recurrence.

6.0 FREQUENCY

6.1 With each occurrence

7.0 EQUIPMENT

7.1 Incident Report Form

8.0 FREQUENCY

8.1 Ongoing as needed for all incidents.

9.0 GENERAL INFORMATION

9.1 Any incident that occurs must be documented and investigated fully.

9.2 This SOP is applicable to all events and incidents which can affect the safety, identity, strength, purity and/or quality of the product. Following are potential factors

9.2.1 Equipment or machine breakdown related

9.2.2 Facility related

9.2.3 Storage related

9.2.4 Production related or having occurred during processing

9.2.5 Sampling or testing related

9.2.6 Delivery or dispensing related

9.2.7 Confirmed failures out of repeat analysis and out of specification (OOS) investigations

9.2.8 Unplanned deviations from approved procedures or SOPs without prior authorization and documentation

9.3 Pharmacy supervisor or manager must investigate the incident, evaluate the impact on quality of the preparation, and prepare the incident investigation report.

10.0 PROCEDURE

10.1 The incident report form will be used to document any actual or potential unexpected and inappropriate event that occurred regarding patient care. Examples include, but are not limited to, the following.

10.1.1 Workplace accident or injury

10.1.1.1 Slip and fall
10.1.1.1.1 Improper ladder use
10.1.1.1.2 Marked or unmarked wet floor
10.1.2 Loss/Breakage
10.1.3 Patient/caregiver reports article missing from home after home visit
10.1.4 Staff involved in damage/breakage of patient's personal belonging or equipment
10.1.5 Staff discovery of personal belongings or equipment missing

10.2 Any untoward event dealing with equipment or devices:
10.2.1 Lack of equipment
10.2.2 Equipment failure or malfunction
10.2.3 Any injury resulting from the use of the equipment or medical device

10.3 An event that may endanger the staff while providing care/service:
10.3.1 Verbal abuse
10.3.2 Physical abuse
10.3.3 The patient is unwilling to accept or follow appropriate instructions.

10.4 Any problem or error dealing with the completion of a procedure or protocol:
10.4.1 Failure to follow a procedure
10.4.2 Care performed outside the scope of practice of the clinician

10.5 Any untoward outcomes related to drug administration or treatment modality:
10.5.1 Adverse or toxic drug reactions
10.5.2 Anaphylaxis

10.6 Noncompliance by the patient/caregiver that results in emergency intervention or hospitalization.

10.7 Any medication error including the patient's failure to follow the physician/nurse/pharmacist instructions as well as delays in the administration sequence or failure of the patient to receive a dose.

10.8 An incident report will be initiated by the person who first becomes aware that an incident has occurred.

10.8.1 The incident report must be completed accurately and no later than 24 hours after the discovery of the occurrence.
10.8.2 All sections of the report are to be completed, leaving no blanks.
10.8.3 If a section does not apply, the words "not applicable" should be written in the space.

10.9 If the incident requires treatment by a physician or an emergency room visit, this must be included in the documentation.

6.020 BEYOND-USE DATING FOR COMPOUNDED PREPARATIONS

Authorized by: Shibu John, Amelia Yeh **Date Effective: 7/15/2025**

1.0 PURPOSE

1.1 The purpose of this procedure is to establish requirements for determining a beyond-use date (BUD) for compounded preparations at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all compounding personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge (PIC) must supervise this procedure and ensure proper personnel training.

4.0 REFERENCES

4.1 USP Current Version <795> "Pharmaceutical Compounding – Non-Sterile Preparations"

4.2 USP Current Version <797> "Pharmaceutical Compounding – Sterile Preparations"

4.3 USP Current Version <1150> "Pharmaceutical Stability"

5.0 DEFINITIONS

5.1 BUD – Beyond-use date

6.0 FREQUENCY

6.1 This procedure must be performed for each compounded preparation.

7.0 EQUIPMENT & SUPPLIES

7.1 Appropriate reference materials

8.0 GENERAL INFORMATION

8.1 All compounded preparations must have an appropriate and conservative BUD.

8.2 The BUD is the date after which a compound preparation must not be used in this determined from the date when the preparation is compounded. Because compounded preparations are intended for administration immediately or following short-term storage, their BUDs are assigned on basis of criteria different from those applied to assigning expiration dates to manufacture products.

8.3 BUDs must be assigned conservatively. When assigning A BUD, compounder must consult and apply drug specific and general stability documentation and literature when available and should consider:

- 8.3.1 the nature of the drug in its degradation mechanism
- 8.3.2 the dosage form and its components
- 8.3.3 the potential for microbial proliferation in the preparation
- 8.3.4 the container in which it's packaged
- 8.3.5 the expected storage conditions

8.3.6 the intended duration of therapy

8.4 BUDs and expiration dates are not the same. Expiration dates are for the chemical and physical stability of manufactured products are determined from result of rigorous analytical and performance testing, and they are specific for a particular formulation in its container an ad stated exposure conditions of illumination and temperature.

8.5 When a compounded preparations deviate from conditions in the approved labeling of manufactured products contained in CSPs, compounding personnel may consult the manufacturer of particular product for advice when assigning BUDs based on chemical and physical stability parameters.

8.6 BUDs for compounded preparations that are performed strictly in accordance with manufacturers product labeling must be those specified in the labeling or from appropriate literature sources or direct testing. BUDs for compounded preparations that lack justification from either appropriate literature sources or by direct testing evidence must be assigned as described in USP Chapter <795> Pharmaceutical Compounding—Non-sterile Preparations under Stability Criteria and Beyond-Use Dating.

9.0 PROCEDURE

9.1 All stability data must be carefully interpreted in relation to the actual compounded formulation.

9.2 All steps in the compounding, dispensing, and storage processes of the compounded preparation must be observed by compounding personnel

9.3 BUDs must be assigned based on current drug stability information and sterility considerations.

9.4 Consideration must be given to all aspects of the finished product including drug reservoir, concentration, and storage conditions.

9.5 A reliable method for determining BUDs must be established, including laboratory testing of product stability, pyrogenicity and chemical content when necessary.

9.5.1 Physical stability of the compounded preparation must signify that the preparation has retained the original physical properties of the preparation, such as appearance, palatability, uniformity, dissolution and suspendability.

9.5.2 Chemical stability of the compounded preparation must signify that each active ingredient has retained its chemical integrity and labeled potency within specified limits.

9.5.3 Microbiological stability of the compounded preparation must signify that sterility or resistance to microbial growth has been retained according to the specified requirements. Antimicrobial agents that are present must retain their effectiveness within the specified limits.

9.5.4 Additional factors that affect the stability of the final preparation, and must be considered, include pH, temperature, solvent, light, air, humidity, particle size, ionic strength, dielectric constant, polymorphism, crystallization, vaporization and absorption.

9.6 In the absence of stability information that is applicable to a specific drug and preparation, the following maximum BUDs are recommended for non-sterile compounded preparations packaged in tight, light-resistant containers and stored at controlled room temperature (unless otherwise indicated):

9.6.1 **For non-aqueous formulations**-the BUD is not later than the time remaining until the earliest expiration date of any API or 6 months, whichever is earlier.

9.6.2 **For Water-Containing Oral Formulations**—The BUD is not later than 14 days when stored at controlled cold temperature.

9.6.3 **For Water-Containing Topical/Dermal and Mucosal Liquid and Semisolid Formulations**—The BUD is not later than 30 days.

9.7 Susceptible preparations should contain suitable anti-microbial agents to protect against bacteria, yeast, and mold contamination inadvertently introduced during or after the compounding process.

9.8 When anti-microbial preservatives are contraindicated in such compounded preparations, storage of the preparation at controlled cold temperature is necessary.

9.8.1 To ensure proper storage and handling of such compounded preparations by the patient or caregiver, appropriate patient instruction and consultation is essential.

9.8.2 Anti-microbial preservatives should never be used as a substitute for good compounding practices.

9.9 Assurance of sterility in a compounded sterile preparation is mandatory. Compounding and packaging of sterile drugs requires strict adherence to guidelines presented in USP chapter 797 Pharmaceutical Compounding—Sterile Preparations

9.10 Applicable publications must be referenced to obtain relevant stability, compatibility and degradation information regarding a drug or its congeners.

9.10.1 A compounding pharmacy reference library will be available for compounding laboratory personnel so they may access critical information in a timely manner.

9.10.2 Referenced publications must be available for compounding personnel. The reference library may include, but not be limited to, the following publications:

9.10.2.1 Facts and Comparisons

9.10.2.2 Handbook on Injectable Drugs (ASHP)

9.10.2.3 Handbook on Injectable Drugs (Trissel)

9.10.2.4 Handbook of Pharmaceutical Excipients

9.10.2.5 International Journal of Pharmaceutical Compounding

9.10.2.6 Internet access to PubMed for literature searches

9.10.2.7 Martindale: The Extra Pharmacopoeia

9.10.2.8 Micromedex Electronic Drug Reference

9.10.2.9 Pharmaceutical Calculations

9.10.2.10 Pharmaceutical Dosage Forms and Drug Delivery Systems

9.10.2.11 Policies and procedures

9.10.2.12 Principles of Sterile Product Preparation (ASHP)

9.10.2.13 Quality Control/Assurance documentation logs

9.10.2.14 Remington: The Science and Practice of Pharmacy

9.10.2.15 State law books and guidelines regarding compounding

9.10.2.16 The Merck Index

9.10.2.17 United States Pharmacopeia or USP Pharmacists' Pharmacopeia--monographs

9.10.3 All periodical subscriptions that pertain to compounding pharmacy must be kept in the reference library.

9.11 RX COMPOUNDSTORE may choose to perform potency assays on products with a narrow therapeutic index, where close monitoring or dose titration is required to ensure

therapeutic effectiveness and to avoid toxicity, where a theoretically established BUD is supported by only marginal evidence or where significant margin of safety cannot be verified.

6.025 BEYOND-USE DATING FOR STERILE COMPOUNDED PREPARATIONS

Authorized by: Shibu John Date: 4/1/2023

1.0 PURPOSE

1.1 The purpose of this procedure is to establish requirements for determining a beyond-use date (BUD) for compounded sterile preparations (CSPs) at RX COMPOUNDSTORE.

2.0 SCOPE

2.1 This procedure applies to all compounding personnel at RX COMPOUNDSTORE.

3.0 RESPONSIBILITY

3.1 The Pharmacist-in-charge must supervise this procedure and ensure proper personnel training and compliance.

4.0 REFERENCES

4.1 USP Current Version <795> "Pharmaceutical Compounding – Non-Sterile Preparations"

4.2 USP Current Version <797> "Pharmaceutical Compounding – Sterile Preparations"

4.3 USP Current Version <1150> "Pharmaceutical Stability"

5.0 DEFINITIONS

5.1 Administration: The direct application of a sterile medication to a single patient by injection, infusing, or otherwise instilling a sterile medication in its final form

5.2 BUD – Beyond-use date: The date and time after which a CSP must not be used, stored, or transported. The date is determined from the date and time the preparation is compounded.

5.3 CRT—Controlled Room Temperature

5.4 CSP—Compounded Sterile Preparations

5.5 **Immediate-Use CSP:** A CSP is for direct and immediate administration within 4 hours after preparation.

5.6 **Category 1 CSP:** A CSP that is assigned a BUD of 12 h or less at controlled room temperature or 24 h or less refrigerated that is compounded in accordance with all applicable requirements for Category 1 CSPs in this chapter.

5.7 **Category 2 CSP:** A CSP that may be assigned a BUD of greater than 12 h at controlled room temperature or greater than 24 h refrigerated that is compounded in accordance with all applicable requirements for Category 2 CSPs in this chapter.

5.8 **Category 3 CSP:** A CSP that may be assigned a BUD exceeding the limits in Table 13 for Category 2 CSPs and is compounded in accordance with all applicable requirements for Category 3 CSPs in this chapter.

5.9 **Component:** Any ingredient used in the compounding of a preparation, including any active ingredient, added substance, or conventionally manufactured product.

5.10 **Compounded sterile preparation (CSP):** A preparation intended to be sterile that is created by combining, admixing, diluting, pooling, reconstituting, repackaging, or otherwise altering a drug product or bulk drug substance.

5.11 **Conventionally manufactured product:** A pharmaceutical dosage form, usually the subject of an FDA approved application, and manufactured under current good manufacturing practice conditions.

5.12 **Immediate Use CSP:** CSP aseptically compounded outside of ISO classified air for direct and immediate administration to a single patient with a maximum BUD of 4 hours from the initiation of compounding.

5.13 **Stability:** The extent to which a product or preparation retains physical and chemical properties and characteristics within specified limits throughout its expiration or BUD.

6.0 FREQUENCY

6.1 This procedure must be performed for each compounded preparation.

7.0 EQUIPMENT & SUPPLIES

7.1 Appropriate reference materials

8.0 GENERAL INFORMATION

8.1 All compounded preparations must have an appropriate and conservative BUD.

8.2 Per USP Chapter <797> BUD limits are intended to help prevent patient harm resulting from microbial proliferation and contamination of CSPs. BUDs are determined by evaluating the chemical stability of the CSP components or formulation, storage conditions, starting components (sterile vs. non-sterile), sterile processing approach, and type of sterile compounding area where the CSP is prepared.

8.3 Expiration dates and BUDs are not interchangeable terms or concepts and medication administration terms cause confusion around the definition and application of BUDs assigned to compounded sterile preparations.

8.3.1 **Expiration date** is the time during which a manufactured product can be expected to meet the requirements of the USP–NF monograph, if one exists, or maintain expected quality provided it is kept under the specified storage conditions; applies to all conventionally manufactured products, active pharmaceutical ingredients (API), and added substances.

8.3.2 **BUD** is the date, or hour and date, after which the administration of a CSP cannot begin. BUDs are not intended to limit administration time; applies to all CSPs and stock solutions made by Compounding Personnel.

8.3.3 **Hang time or administration time** refers to the amount of time during which a CSP or conventionally manufactured product (e.g. pre-mix, large volume parenteral solution) may by be infused before which the tubing or medications needs to be changed due to stability

8.4 This policy denotes the BUD assignment for all CSPs compounded at RX COMPOUNDSTORE.

8.4.3 Refer to USP Chapter <797> for the procedures and further information about the requirements and definition of Category 1 CSPs

8.4.3.1 ≤ 12 hours at CRT

8.4.3.2 ≤ 24 hours in a refrigerator

8.4.4 Refer to USP Chapter <797> for the procedures and further information about the requirements and definition of Category 2 CSPs.

8.4.5 Category 2 CSPs will be compounded at RX COMPOUNDSTORE

8.4.5.1 Aseptically processed, no sterility testing, only sterile starting component(s)

8.4.5.1.1 4 days at CRT (20° C to 25° C)

8.4.5.1.2 10 days in a refrigerator (2° C to 8° C)

8.4.5.1.3 45 days in a freezer (-25 ° to -10° C)

8.4.5.2 Aseptically processed, no sterility testing, one or more nonsterile starting component(s)

8.4.5.2.1 1 day at CRT (20° C to 25° C)

8.4.5.2.2 4 days in a refrigerator (2° C to 8° C)

8.4.5.2.3 45 days in a freezer (-25 ° to -10 ° C)

8.4.5.3 Aseptically processed, passed sterility testing

8.4.5.3.1 30 days at CRT (20° C to 25° C)

8.4.5.3.2 45 days in a refrigerator (2° C to 8° C)

8.4.5.3.3 60 days in a freezer (-25 ° to -10 ° C)

8.4.5.4 Terminally sterilized, no sterility testing

8.4.5.4.1 14 days at CRT (20° C to 25° C)

8.4.5.4.2 28 days in a refrigerator (2° C to 8° C)

8.4.5.4.3 45 days in a freezer (-25 ° to -10 ° C)

8.4.5.5 Terminally sterilized, passed sterility testing

8.4.5.5.1 45 days at CRT (20° C to 25° C)

8.4.5.5.2 60 days in a refrigerator (2° C to 8° C)

8.4.5.5.3 90 days in a freezer (-25 ° to -10 ° C)

8.4.6 Only Category 3 CSPs will be compounded at RX COMPOUNDSTORE

8.4.6.1 Aseptically processed, sterility tested, and passing all applicable tests for Category 3 CSPs

8.4.6.1.1 60 days at CRT (20° C to 25° C)

8.4.6.1.2 90 days in a refrigerator (2° C to 8° C)

8.4.6.1.3 120 days in a freezer (-25 ° to -10° C)

8.4.6.2 Terminally processed, sterility tested, and passing all applicable tests for Category 3 CSPs

8.4.6.2.1 90 days at CRT (20° C to 25° C)

8.4.6.2.2 120 days in a refrigerator (2° C to 8° C)

8.4.6.2.3 180 days in a freezer (-25 ° to -10° C)

8.5 BUDs are assigned by Compounding Personnel with consideration for factors that could impact the CSP quality or sterility including, but not limited to:

- 8.5.1 Chemical and physical stability of the components and/or formulation
- 8.5.2 Container closure system and compatibility with the final preparation and storage conditions
- 8.5.3 Compounding environment in which the CSP is prepared
- 8.5.4 Aseptic processing and sterilization method
- 8.5.5 Sterility of starting components
- 8.5.6 Whether or not sterility testing is performed (if applicable)
- 8.5.7 Storage conditions

8.6 When the chemical or physical stability of the CSP is shorter than the maximum BUD, the most conservative dating becomes the BUD.

- 8.6.1 Chemical stability is based on available manufacturer's data, published literature, and industry references.

8.7 Packaging is selected for the CSP to preserve sterility, chemical stability, and potency.

8.8 CSPs stored under or moved to different storage conditions before they are used assume the new shorter BUD of the storage condition(s) which does not to exceed the original BUD placed on the CSP at the time of preparation

- 8.8.1 BUDs are not additive; administration is initiated before the BUD is exceeded or the CSP is promptly and appropriately discarded
- 8.8.2 Once a CSP has been stored under a new storage condition requiring a shorter BUD, the CSP is used within the shortened timeframe

8.9 Storage conditions per **USP <659> Packaging and Storage Requirements:**

- 8.9.1 Controlled Room Temperature: 20°C to 25°C
- 8.9.2 Refrigerated: 2°C to 8°C
- 8.9.3 Frozen: -25°C to -10°C

8.10 Multiple-dose CSPs, including topical ophthalmic CSPs, meet the following criteria:

- 8.10.1 Prepared as Category 2
- 8.10.2 Preserved unless prepared specifically for a sterile topical application (including ophthalmic use). Preservatives are appropriate for the dosage form, intended patient population, and route of administration.
- 8.10.3 Non-preserved topical CSPs are only prepared for a single patient and labeled with a Discard by Date (or "in-use" date)
- 8.10.4 Dispensed in a multi-dose container closure system that has been evaluated for and conforms with container closure integrity testing (per USP <1207>; except for sterile multi-dose topical applicators such as eye droppers)
- 8.10.5 Assigned a maximum BUD per USP <797> (see Section 2.2) and labeled with a Discard by Date as follows:

Multi-Dose CSPs		
	Maximum BUD (from compounding date)	Discard By Date (or "in-use" time once opened)
Nonaqueous multi-dose CSPs	Per USP <797> BUDs (see Section 2.2)	No longer than 28 Days* or the Labeled BUD (whichever is shorter)

Multi-Dose CSPs		
	Maximum BUD (from compounding date)	Discard By Date (or "in-use" time once opened)
Preserved aqueous multi-dose CSPs *with* passing USP <51> compliant antimicrobial effectiveness testing	Per USP <797> BUDs (see Section 2.2)	No longer than 28 Days* or the Labeled BUD (whichever is shorter)
Non-preserved aqueous multi-dose CSPs for topical use	Per USP <797> BUDs (see Section 2.2)	No longer than: 24 hours stored at room temp OR 72 hours if stored refrigerated

*28 Days at room temperature or storage temperature per manufacturer's specifications

8.11 Conventionally manufactured sterile products or components used in the preparation of CSPs adhere to the following BUDs, use and storage requirements:

Conventionally Manufactured Products & Components		
	Expiration Date	Use and Storage Conditions
Single-dose containers	12 hours	• Punctured and entered within an ISO Class 5 PEC • Stored per labeled storage conditions
Ampule (or open plastic luer lock vials)	Discard immediately after use	• Punctured and entered within an ISO Class 5 PEC
Multi-dose containers	28 days (unless otherwise specified by manufacturer's labeling)	• Punctured and entered within an ISO Class 5 PEC • Stored per labeled storage conditions
Pharmacy bulk packages	Per manufacturers labeling	• Punctured and entered within an ISO Class 5 PEC • When manufacturer provides a shorter expiration time after puncture or entry, use the shorter dating and clearly label on packaging
Proprietary bag & vial systems	• Docking and activation for immediate use – is NOT considered compounding (no BUD assignment required) and can be performed in a non-classified area. • Docking for future activation and use – performed in an ISO Class 5 PEC and assigned a BUD that does not exceed the BUD specified in the manufacturer's labeling.	

8.12 CSPs compounded as components for use in other CSPs are initially assigned BUDs per USP <797> (see Section 2.2) and adhere to the following BUDs, use, and storage conditions once entered or punctured for use in a Final CSP; the BUD of the Final CSP is not impacted by the component CSP.

CSPs Compounded as a Component in a Final CSP			
	BUD of Component CSP Once Punctured	BUD of Final CSP Using Component	Use and Storage Conditions of Component
Preserved multi-dose Component CSP	No longer than 28 Days or the Component BUD (whichever is shorter)	Per USP <797> (not impacted by the Component BUD)	• Punctured and entered within an ISO Class 5 PEC • Stored per conditions intended for the initial BUD
Single-Dose & CSP Stock Solutions	≤ 12 Hours or the Component BUD (whichever is shorter)	Per USP <797> (not impacted by the Component BUD)	• Punctured and entered within an ISO Class 5 PEC • Stored per conditions intended for the initial BUD • Remainder is discarded

8.13 Roles & Responsibilities

8.13.1 The Designated Person(s):

8.13.2 Ensures all CSPs compounded at RX COMPOUNDSTORE are assigned the correct and appropriate BUD by careful consideration and research pertaining to component and final CSP stability, sterility of components and sterilization method used (if appropriate), container closure system, and compounding conditions

8.13.3 Ensures Master Formula Records (MFRs) and/or IV Workflow Systems have the correct BUD, CSP storage, and drug stability information and instructions

8.13.4 Ensures Compounding Personnel are educated on how to accurately determine and document BUDs and storage conditions for CSPs and conventionally manufactured and compounded components used in compounding Final CSPs

8.13.5 Ensures individuals (e.g., practitioners, patients, caregivers, other support staff) transporting, storing, or administering mediations understand how to interpret and/or adjust BUDs if conditions warrant

8.14 Compounding Personnel

8.14.1 Determine and properly record the BUD on the immediate product label and affix all appropriate auxiliary labels confirming required storage conditions

8.14.2 Conduct all aseptic manipulations in an ISO 5 and store CSPs and components appropriately

9.0 Procedure

9.1 Category 1 Compounded Sterile Preparations

9.1.1 Determine the appropriate BUD for Category 1 CSPs (refer to Section 2.2 adapted from Table 12 of USP <797>). Category 1 CSPs meet the following criteria:

9.1.1.1 Compounded in a Segregated Compounding Area (SCA)

9.1.1.2 Compounded in a certified ISO Class 5 Primary Engineering Control (PEC)

9.1.1.3 Compounded aseptically by qualified Compounding Personnel

9.1.1.4 Compounded using only sterile starting components

9.1.1.5 Stored in conditions associated with the assigned BUD

9.1.2 At the direction and discretion of the Designated Person(s), assign Category 1 CSP BUDs to preparations made in a sterile compounding suite under the following circumstances including:

9.1.2.1 Assign Category 1 BUDs to all CSPs prepared in a sterile suite when facilities and/or environmental conditions are out-of-specification.

9.1.3 Sterility and endotoxin testing is not required for Category 1 CSPs

9.2 Category 2 Compounded Sterile Preparations

9.2.1 Determine and assign the appropriate BUD for Category 2 CSPs (refer to Section 2.2 adapted from Table 13 of USP <797>). Category 2 CSPs meet the following criteria:

9.2.1.1 Compounded in a cleanroom suite
9.2.1.2 Compounded in an ISO Class 5 PEC located in ISO Class 7 Buffer Room
9.2.1.3 Compounded aseptically by qualified Compounding Personnel
9.2.1.4 Aseptically processed utilizing sterile and/or non-sterile starting components
9.2.1.5 Undergo aseptic or terminal sterilization of the final CSP (if appropriate)

9.2.2 Category 2 CSPs are eligible for longer BUDs (refer to Section 2.2) when USP <71> compliant sterility testing is performed and passed.

9.2.3 Category 2 CSPs assigned longer BUDs and compounded from nonsterile starting ingredients require Bacterial Endotoxin Testing that meets USP <85> requirements to validate endotoxin levels do not surpass established or calculated maximum limits based on route of administration

9.2.4 Refer to the **Sterilization and Depyrogenation** policy for aseptic and terminal sterilization requirements and procedures.

9.2.5 Refer to the **Sterility and Bacterial Endotoxin Testing** policy for related requirements and procedures.

9.3 ***The following section is for informational purposes only. RX COMPOUNDSTORE will not prepare Category 3 CSPs.*** **Category 3 Compounded Sterile Preparations: Maximum BUDs**

9.3.1 Determine and assign the appropriate BUD for Category 3 CSPs. Category 3 CSPs meet the following criteria:

9.3.1.1 All of the requirements for Category 2 BUDs
9.3.1.2 Increased personnel competency, garbing, environmental monitoring, and cleaning requirements per USP <797> at met at all times.

Refer to the **Category 3 CSP** policy for related requirements.

9.3.1.3 Category 3 BUDs are supported by stability data obtained via a stability-indicating analytical method able to distinguish APIs from their degradants and impurities as well as quantify APIs present in each unique formulation and container closure system

9.3.1.4 Prepared according to the exact formulation and procedures from which the stability data is derived

9.3.1.5 Packaged and stored in container closure systems of the same materials of composition as those used in the referenced stability study

9.3.1.6 Stability data collection method(s) used are validated based on characteristics and parameters described in USP <1225> - Validation of Compendial Articles

9.3.2 All Category 3 CSPs undergo sterility testing that meets the requirements of USP <71> or a validated and non-inferior method

9.3.3 Category 3 CSPs require endotoxin testing that meets USP <85> requirements if compounded from one or more non-sterile starting component(s) to validate endotoxin levels do not surpass established or calculated maximum limits based on route of administration

9.3.4 Each Category 3 CSP formulation for injectables undergoes USP <788> compliant particulate matter testing once with acceptable results

9.3.5 Each Category 3 CSP formulation for ophthalmic solutions undergo USP <789> compliant particulate matter testing once with acceptable results

9.3.6 Refer to **Sterilization and Depyrogenation** policy for aseptic and terminal sterilization requirements and procedures.

9.3.7 Refer to policy **Sterility and Bacterial Endotoxin Testing** for endotoxin testing requirements and procedures.

9.4 Preserved Multi-dose CSPs:

9.4.1 If a multi-dose CSP meets the requirements of antimicrobial effectiveness testing per USP <51>, the maximum BUD does not exceed the assigned BUD or 28 days from initial puncture, whichever is shorter.

9.5 Topical Ophthalmic CSPs (and other non-preserved topical CSPs):

9.5.1 Preserved topical ophthalmic CSPs with proven antimicrobial effectiveness testing results per USP <51> are assigned a maximum BUD of 28 days.

9.5.2 Non-preserved topical ophthalmic CSPs are assigned a maximum BUD of 28 days but must carry the following BUD adjustment labeled on the CSP container: "Discard 24 hours after first opening when stored at controlled room temperature or after 72 hours when stored under refrigeration".

9.6 CSPs Compounded as a Component or Stock Solution:

9.6.1 When the CSP component or stock solution is stored according to its originally assigned BUD and only punctured or entered in an ISO 5 PEC for use in a Final CSP:

9.6.1.1 Preserved, multi-dose component CSPs can be used for up to 28 days

9.6.1.2 Single-dose (non-preserved) component CSPs or stock solution can be used for up to 12 hours or the originally assigned BUD, whichever is shorter. Any remaining CSP from the original component or stock solution is discarded.

9.6.2 Final CSPs compounded from multi-dose, single-dose, or stock solution CSPs are assigned BUDs consistent with USP <797> (refer to Section 2.2); the BUD of the component CSP does not affect the determination of the BUD for the Final CSP.

9.7 Epidural, intrathecal and intraventricular CSPs:

9.7.1 Due to the highly sensitive nature and potential life-threatening impacts of medication administered via these routes, CSPs prepared for administration do not exceed the following:

Epidural, intrathecal, or intraventricular CSPs	Controlled Room Temperature [20°C - 25°C]	Refrigerated Temperature [2°C- 8°C]	Frozen Temperature [-25°C - -10°C]
Epidural or Intrathecal	{{*[< 24 hours]*}}	{{*[< 24 hours]*}}	NA
Intraventricular	{{*[< 8 hours]*}}	{{*[< 8 hours]*}}	NA

9.8 Proprietary bag and vial systems:

9.8.1 Docking of proprietary bag and systems for FUTURE activation and administration is considered compounding and is compounded in an ISO Class 5 PEC. BUD assignment does not exceed the BUD stated in the manufacturer's labeling.

9.8.2 Docking and activation of proprietary bag and vial systems for IMMEDIATE administration is not considered sterile compounding and is not assigned a BUD.

9.9 Conventionally Manufactured Products, APIs, and Components used in CSPs

9.9.1 BUDs for entered or punctured commercially manufactured products used to compound a CSP do not exceed the values listed in Section 2.9.

9.9.2 Inspect for damage or visible defects to the packaging or the product prior to use.

9.9.3 Puncture or enter in an ISO Class 5 PEC.

9.9.4 Commercially manufactured products are stored per the labeled instructions. When storage temperature and/or

condition deviations are known or suspected, consult with the Designated Person(s) or the manufacturer's healthcare support line. Discard the product if data validating the safety and stability of the medication under the excursion conditions cannot be attained.

Section 9: Statement of Responsibility - MUST BE COMPLETED by an Authorized Person (NAC 639.945)

Statement of Responsibility

1. I am the CEO (title) for St. Luke Compounding Pharmacy (name of Pharmacy) and in that capacity, I am authorized to speak on the Pharmacy's behalf.
2. I understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be responsible for any violations of pharmacy law that may occur in the Pharmacy owned by such owner(s), shareholder(s), member(s), or partner(s).
3. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be named in any action taken by the Nevada State Board of Pharmacy against the Pharmacy.
4. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) cannot require or permit the pharmacist(s) in said Pharmacy to violate any provision of local, state, or federal laws or regulations pertaining to the practice of pharmacy.
5. I further understand and acknowledge that Nevada law requires that each pharmacy located inside the State of Nevada employ only pharmacists, intern pharmacists, pharmaceutical technicians, and technicians in training that are licensed by the Nevada State Board of Pharmacy. (NRS 639.100).
6. I further understand and acknowledge that Nevada law requires that each pharmacy located outside the State of Nevada engaged in providing pharmacy services into Nevada employs at least one pharmacist licensed by the Nevada State Board of Pharmacy who will be responsible for any prescription dispensed to a patient located in Nevada and responsible for any acts or omissions of pharmacy personnel who are not registered with the Board. (NRS 639.2328).

Section 8: Arrests, Detentions, Litigations, Arbitrations	Yes	No
1. Have you ever been convicted of, or entered, a plea of guilty, guilty by mentally ill or nolo contendere to any criminal offense or civil violation, federal or state, for any reason whatsoever, regardless of the disposition of the event? (Except minor traffic citations.)		✔
2. If you answered "yes" to question 1, was the offense or violation related to drugs, including prescription drugs and/or controlled substances, the manufacturer or distribution of drugs or the practice of pharmacy?		✔
3. Have you ever had a civil or criminal record expunged or sealed by a court order?		✔
4. Have you, as an individual, member or a company, partner, or owner, director or officer of a corporation, ever been a party to a lawsuit as either a plaintiff or defendant (including any administrative proceedings before a licensing board) or of an arbitration as either a claimant or respondent? (Other than divorces.)		✔
5. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) been a party to a lawsuit (including any administrative proceedings before a licensing board), arbitration or bankruptcy?		✔
6. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer or director) ever appeared before any licensing agency or similar authority in or outside the State of Nevada for any reason whatsoever (including any disciplinary or board citation)?		✔
7. Have you ever been denied a personal license, permit, certificate or registration for a privileged, occupational or professional activity?		✔
8. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner member, officer or director) ever been refused a business license.		✔
9. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) ever surrendered a license, permit, certificate or registration relating to the pharmaceutical industry voluntarily or otherwise (other than upon voluntary closure of a manufacturer).		✔
10. Have you been diagnosed or treated for any mental illness, including alcohol or substance abuse, or physical condition that would impair your ability to perform the essential functions of your license?		✔

I, Andrew Mesiha, **certify that as the designated representative for**

St. Luke Compounding Pharmacy,

that I (initial that you have read and meet the following requirements) (NAC 639.5005, NAC 639.5935):

1. A.M. I am at least 21 years of age;
3. A.M. I have been employed for at least 6,000 hours in a pharmacy or with a wholesaler in a capacity related to the dispensing and distribution of, and recordkeeping related to, prescription drugs.
4. A.M. I will be actively involved in and aware of the actual daily operations of the pharmacy or wholesaler;
5. A.M. I will be employed full-time in a managerial level position with the pharmacy or wholesaler;
6. A.M. I will be physically present at site of the pharmacy or at the facility of the wholesaler during regular business hours, except when the absence of the representative is authorized, including sick leaves, vacation leaves and other authorized absences; and
7. A.M. I will serve in this representative capacity for only one pharmacy or wholesaler at a time.

Section 8: Arrests, Detentions, Litigations, Arbitrations.	Yes	No
1. Have you ever been convicted of, or entered, a plea of guilty, guilty by mentally ill or nolo contendere to any criminal offense or civil violation, federal or state, for any reason whatsoever, regardless of the disposition of the event? (Except minor traffic citations.)		✓
2. If you answered "yes" to question 1, was the offense or violation related to drugs, including prescription drugs and/or controlled substances, the manufacturer or distribution of drugs or the practice of pharmacy?		✓
3. Have you ever had a civil or criminal record expunged or sealed by a court order?		✓
4. Have you, as an individual, member or a company, partner, or owner, director or officer of a corporation, ever been a party to a lawsuit as either a plaintiff or defendant (including any administrative proceedings before a licensing board) or of an arbitration as either a claimant or respondent? (Other than divorces.)		✓
5. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) been a party to a lawsuit (including any administrative proceedings before a licensing board), arbitration or bankruptcy?		✓
6. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer or director) ever appeared before any licensing agency or similar authority in or outside the State of Nevada for any reason whatsoever (including any disciplinary or board citation)?		✓
7. Have you ever been denied a personal license, permit, certificate or registration for a privileged, occupational or professional activity?		✓
8. Has any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner member, officer or director) ever been refused a business license.		✓
9. Have you or any general or limited partnership, company or limited liability company, business venture, sole proprietorship or closely held corporation, corporation (while you were associated with it as an owner, partner, member, officer, or director) ever surrendered a license, permit, certificate or registration relating to the pharmaceutical industry voluntarily or otherwise (other than upon voluntary closure of a manufacturer).		✓
10. Have you been diagnosed or treated for any mental illness, including alcohol or substance abuse, or physical condition that would impair your ability to perform the essential functions of your license?		✓

I certify under penalty of perjury that the information contained in this application is accurate, true and complete in all material respects. I understand that making any false representation in this application is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire application and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event this application is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

Sterile Compounding Questionnaire

Rev (09/11/2024)

This application cannot be returned by fax or email.
We must have an original signature to process.

Approval of this completed questionnaire is required for an existing pharmacy, new pharmacy and/or out-sourcing facility applicant who wish to engage in preparing, compounding, dispensing, and furnishing sterile compounded products to Nevada patients or consumers.

Please provide a thorough response to the questions below and provide any necessary supporting documents.
-For a new pharmacy or out-sourcing facility applicant, submit this completed form with your application.
-For an existing pharmacy, send the completed form to the address indicated above.

Section 1: General Information

Pharmacy Name: St. Luke Compounding Pharmacy

NV Pharmacy or Outsourcing facility license # (if applicable): PH32747

Physical Address: 9338 Little rd

City: New Port Richey State: Fl Zip: 34654

Mailing Address (if different from physical address): _____

City: _____ State: _____ Zip: _____

Telephone: 727-416-2006 Toll Free # (NAC 639.708, NRS 639.23286): 877-310-5668

Fax: 727-416-2007 Contact Email: admin@stlukecompounding.com

Website: www.stlukecompounding.com

Nevada Business License # (if applicable) _____

Supervising/Managing Pharmacist Name (NRS 639.220): Andrew Mesiha

Supervising/Managing Pharmacist NV Pharmacist Registration #: 24289

Name of Designated Person(s) as defined by revised USP-797 guidelines: Andrew Mesiha

Email of Designated Person(s): admin@stlukecompounding.com

Telephone of Designated Person(s): 727-416-2006

Section 2: Sterile Compounding Questions (Use a separate piece of paper if additional space is needed.)

1. What risk level sterile compounding will your facility be performing (check all that apply)?

☐ Category 1 ■ Category 2 ☐ Category 3

If you marked **"Category 3"**, you must also complete **section 4.**

2. If compounding Category 2 products is the location performing sterility and endotoxin testing (if required) to obtain extended beyond-use dates? ■ Yes ☐ No

3. If compounding Category 2 products is the location performing aseptically processed CSPs or terminally sterilized CSPs? ■ Aseptic ☐ Terminal

4. Is the pharmacy following the new garbing requirements listed in the revised USP-797 guidelines? ■ Yes ☐ No

5. When was the most recent certification for the ISO classified areas? 07/03/2025 and 09/16/2025 for BSC

6. What is the frequency of the recertification for the ISO classified areas? every 6 months

7. Were there any follow-up items required from the most recent certification report? ☐ Yes ■ No

8. If preparing Category 2 or Category 3 CSPs from non-sterile starting components are the pre-sterilization procedures such as weighing and mixing completed in an ISO Class 8 or better environment? ■ Yes ☐ No

9. If compounding Category 1 CSPs and Category 2 CSPs how often is surface sampling of all classified areas and pass-through chambers conducted? monthly

10. Will you be performing sterile hazardous drug compounding? ■ Yes No

If you marked **"Yes"**, you must also complete **section 3.**

11. List the sterile compounded products that you will be compounding for Nevada patients or consumers:

Sermorelin 3 mg/mL Injection Solution Preserved (5 mL)
Methylcobalamin 5000 mcg/mL Sterile Solution for Injection
Nicotinamide Adenine Dinucleotide (NAD+) 200mg/mL Sterile Injectable Solution (Preserved)
LIPO C (Methionine 25mg - Inositol 100mg - Choline Chloride 50mg - L-carnitine 50 mg - Cyanocobalamin 1mg /mL Sterile Solution for Injection
TIRZEPATIDE/NIACINAMIDE 20MG/2MG/ML INJECTION SOLUTION
SEMAGLUTIDE/PYRIDOXINE 5MG/10MG/ML (2ML) INJECTABLE SOLUTION
SEMAGLUTIDE/PRYRIDOXINE 2.5MG/10MG/ML (2ML) INJECTABLE SOLUTION
Ascorbic Acid 550mg/mL Sterile Solution for Injection
Methionine (L) 15mg - Choline Chloride 50mg - Carnitine(L) 50mg - Dexpanthenol 5mg /mL Sterile Solution for Injection
TESTOSTERONE CYPIONATE INJECTABLE SOLUTION 200MG/ML (SESAME OIL) (5ML)
Glutathione 200 mg/mL Injection (Solution) 30 ml
Prednisolone Phosphate 1% - Moxifloxacin 0.5% - Bromfenac 0.09% Ophthalmic Solution

12. What laboratory performs your sterility or endotoxin testing?

Name: Pharmetric Laboratory

Address: 7265 Ulmerton Rd.

City: Largo State: Fl Zip: 33716

Telephone: 727-209-5778

13. What is your procedure for visual inspection of compounded sterile products?

1. Container IntegrityInspect vials/syringes for cracks, chips, leaks, or closure defects.Confirm proper seal and absence of residue.2. Solution InspectionUnder appropriate lighting and both white and black backgrounds, verify:No visible particulate matterNo cloudiness, precipitation, crystallization, discoloration, or phase separationAny abnormality results in product quarantine and investigation.3. Label VerificationConfirm correct drug, strength, volume, BUD, lot number, and storage instructions.Compare label to the prescription and formulation record.4. DocumentationInspection findings are recorded on the batch record with date and inspector initials.Product cannot be released until all criteria are met.

14. How often do you perform glove fingertip and medial fill testing?

every 6 month

15. Describe your initial and ongoing training program for all personnel performing sterile compounding:

Initial and Ongoing Training Program for Sterile Compounding Personnel Completion of didactic training on USP <797>, aseptic technique, contamination control, and facility SOPs Hands-on training in garbing, gowning, hand hygiene, cleaning, and aseptic manipulations Successful completion of media-fill testing and gloved fingertip/thumb sampling prior to independent compounding Demonstration of competency in equipment use, environmental monitoring, labeling, documentation, and workflow procedures Annual (or more frequent) requalification, including media fills, gloved fingertip testing, and observational competency assessments Ongoing training when new equipment, procedures, or formulations are introduced Continuous performance monitoring with corrective action and retraining if deviations are observed

16. Describe the cleaning procedure for your primary and secondary engineering controls, including the frequency of cleaning and the names of cleaning, disinfectant, sporicidal, and/or deactivation and decontamination agents used:

ISO 5 areas (LAFWs/BSCs) require the most frequent disinfection with sterile 70% IPA:Beginning of each shift Before each batch At least every 30 minutes during continuous compounding Before critical manipulations After spills (post-decontamination)When contamination is suspected Policy covers ISO 7 buffer rooms, ISO 7/8 anterooms, SCAs, and PECs. Applies to non-hazardous and hazardous compounding (HD procedures require additional steps per HD SOP).Leadership selects cleaning agents based on compatibility, effectiveness, and residue safety.Daily and monthly cleaning uses EPA-registered, sterile bactericidal/sporicidal one-step agents for PECs and room surfaces.A fungicidal agent is used weekly; additional rotation is not required due to low cleanroom bioburden.Sterile water is used to dilute disinfectants for ISO 5 use (if applicable) to avoid bioburden introduction.General preparation areas, though not ISO-classed, are included in the cleaning schedule.Daily cleaning occurs at day's end to prevent overnight microbial growth; no cleaning is performed during compounding. Monthly cleaning occurs in the 4th week of each month, following a top-to-bottom sequence; may extend over several days as long as daily cleaning continues. Only trained personnel may perform cleaning; required competencies:Hand hygiene/garbing + three successful gloved fingertip tests Cleaning & disinfecting competency assessment Cleaning agents:EPA-registered surfactant-containing agents onlyPeridox RTU® (sterile) used for daily and monthly cleaning and material handling HD decontamination uses Peridox RTUS

17. Who performs the sterile compounding process at your facility?

Sahar Mikhail - Sterile Pharmacy Technician

18. Who is responsible and accountable for the sterile compounding process at your facility?

Andrew Mesiha

19. If products are shipped/mailed, what shipping conditions are used to ensure product safety/efficacy?

All compounded sterile and temperature-sensitive products are shipped using validated cold-chain packaging to maintain required temperatures throughout transit with indicators. Refrigerated items (2–8°C) are shipped with gel packs/ice bricks and insulated containers to ensure stability until delivery. Ambient-stable products are shipped in protective packaging.

Section 3: Sterile Hazardous Compounding Questions (Complete this section ONLY if you be performing Sterile Hazardous Compounding:)

1. What type of primary engineering controls will you be using in your facility?
biological safety cabinet class AII

2. Are you complying with all USP 800 guidelines?	■ Yes	No
3. Have your employees who compound with hazardous drugs signed an acknowledgement that they understand the risks associated with this process?	■ Yes	No
4. Is your BSC or CACI vented 100% to the outside?	■ Yes	No
5. Do you have a negative pressure buffer room at your facility?	■ Yes	No
6. Will you be compounding with antineoplastic HDs or HD API?	■ Yes	No
7. If yes, are the drugs stored in an externally ventilated, negative pressure room?	■ Yes	No
8. Will you be utilizing a closed system transfer device?	■ Yes	No

9. If yes, list the name of the device:
USP <800>-compliant Closed System Transfer Device (e.g., BD® PhaSeal™, Equashield®, or Tevadaptor®)

10. What information is provided to the patient or consumer on the proper handling and disposal of hazardous drugs products/containers?
Information Provided to Patients on Handling and Disposal of Hazardous Drug Products Written counseling materials instruct patients to handle hazardous drugs with care, avoiding direct skin or mucosal contact. Patients are advised to wash hands before and after handling the medication or containers. Guidance is provided on using protective gloves (if appropriate) when handling the drug, especially if tablets/capsules are not unit-dose sealed. Instructions emphasize not to crush, open, or split hazardous drug capsules or tablets. Patients are advised to store the medication securely, away from children, pets, food, and household items. Disposal instructions direct patients to return unused medication and contaminated supplies to a pharmacy, medical facility, or take-back program—never to place them in household trash or wastewater. Patients are instructed to place contaminated materials (e.g., gloves, wipes) in a sealed plastic bag until proper disposal. Contact information for the pharmacy is provided for questions about safe handling or disposal.

11. Describe your initial process for training new employees prior to compounding sterile hazardous drugs?

Initial Training Process for Employees Prior to Compounding Sterile Hazardous Drugs Completion of didactic training on USP <797> and USP <800>, hazardous drug risks, PPE use, and contamination prevention. Instruction on facility SOPs covering HD handling, storage, engineering controls, cleaning, and spill management. Demonstration and supervised practice of proper garbing, hand hygiene, and use of CSTDs. Hands-on training in negative-pressure PEC workflow and safe aseptic technique specific to HDs. Successful completion of gloved fingertip testing and media fill testing before performing any independent HD compounding. Assessment of competency in decontamination, waste disposal, labeling, and documentation requirements. New employees must complete all training and competency evaluations before being permitted to handle or compound hazardous drugs.

Section 4: Sterile Category 3 Compounding Questions (Complete this section ONLY if you will be performing Category 3 Compounding.)

1. List the specific Category 3 sterile products that your facility compounds:

2. What is the frequency for ongoing garbing, gloved fingertip and thumb sampling, and media fill testing for compounding personnel?

3. Is the pharmacy meeting all of the additional garbing requirements for compounding Category 3 CSPs as defined by the revised USP-797 guidelines? Yes No

4. What is the frequency for completing volumetric active air sampling?

5. What is the frequency for completing surface sampling?		
6. What is the frequency for using sporicidal agents?		
7. Is an endotoxin test performed for all products compounded from one or more nonsterile component?	Yes	No
8. Is the BUD assigned supported by stability data obtained using a stability-indicating analytical method?	Yes	No

I certify under penalty of perjury that the information contained in this form is accurate, true and complete in all material respects. I understand that making any false representation in this form is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire form and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event the form is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

INV 359 - Community Requirements

Signage Requirements Section

INV359 - Community Requirements

Insp # 199614 st luke lab File # 26858

Signage stating the hours the pharmacy department is open. [64B16-28.1081(2), F.A.C.]	Yes
"Prescription Department Closed" sign with bold letters not less than 2 inches in width and height is displayed in a prominent place where it is easily read by patrons. [64B16-28.109, F.A.C.]	Yes
Patient Consultation Area sign is posted. [64B16-30.003, F.A.C] [64B16-28.1035, F.A.C.]	Yes

Community Requirements General Section

Outdated medications removed from active stock. [64B16-28.110, F.A.C.] [64B16-28.1191, F.A.C.]	Yes
Prescription Department is open for a minimum of 20 hours per week. [64B16-28.1081(1), F.A.C.]	Yes
All controlled substance prescriptions (electronic, faxed, verbal and written) contain required information. [893.04(a)(b)(c), F.S.] [21CFR1306.05]	Yes
Certified daily log or signed printout maintained. [21CFR1306.22(f)(3)] [64B16-28.140(3)(d), F.A.C.]	Yes
Prescription department has current copy of laws and rules, references and equipment necessary to the professional practice of pharmacy. [64B16-28.102(5)(a), F.A.C.]	Yes
Technicians properly identified. [64B16-27.100(2), F.A.C.] [64B16-27.4001, F.A.C.] [64B16-27.410, F.A.C.] [64B16-27.420, F.A.C.]	Yes
Legend drugs properly stored within confines of pharmacy department and maintained at appropriate temperature to preserve therapeutic activity. [64B16-28.118, F.A.C.]; [64B16-28.120, F.A.C.]; [64B16-28.102, F.A.C.]	Yes
Documentation of destruction or return of controlled substances. [64B16-28.303, F.A.C.] *EcoPharm*	Yes
Generic equivalent sign is posted. [465.025(7), F.S.]	Yes

Additional Community Requirements

Prescription department is operating under clean, sanitary, and uncrowded health conditions. [64B16-28.102, F.A.C.]	Yes
Prescription department has a sink with running water easily accessible to the prescription counter. [64B16-28.102, F.A.C.]	Yes
Pharmacist is on the premises and on duty when the prescription department is open. [64B16-28.109, F.A.C.]	Yes
Pharmacy maintains a written policy and procedure manual regarding the number of registered pharmacy technician positions and the pharmacy operates within the established ratio as defined by rule. [64B16-27.410(2)(a), F.A.C.]	Yes
Pharmacists, technicians, and interns are licensed in the State of Florida. [465.015(1)(a), F.S.]	Yes
Upon receipt of a new or refill prescription, a verbal and printed offer to counsel is made to the patient or the patient's agent. [64B16-27.820(1), F.A.C.]	Yes
Medication is properly labeled for dispensing to patient. [64B16-28.108, F.A.C.]	Yes
Unclaimed prescriptions are maintained in stock for no more than one year past dispensing date. [64B16-28.1191, F.A.C.] *Compounding facility (No return to stock)*	N/A
Manufacturer containers are properly labeled. [499.003(26), F.S.]	Yes
Customized medication packages are labeled properly with beyond use date of not more than 120 days from the date of preparation but not later than the beyond use date for any of the medications in the package. [64B16-28.108(6)9., F.A.C.]	N/A
Continuous Quality Improvement Program described in the Pharmacy policy and procedure manual and quarterly summarization of Quality-Related Events are available for inspection. [64B16-27.300, F.A.C.] [766.101(1)(a)(l), F.S.] *December 11th, 2024, March 25th, 2025 Reviewed.*	Yes
Pharmacy maintains patient profile with allergy information and medications dispensed. [64B16-27.800, F.A.C.] *Pharmetika*	Yes
Compounding records include compounding date, lot number, expiration date, name and manufacturer of ingredients, package size, number of units, technician compounding and pharmacist verifying the final compound. [64B16-28.140(4), F.A.C.]	Yes
The pharmacy maintains an audit trail for all drugs from receipt or acquisition to sale or disposition [499.005, F.S.] [61N-1.012, F.A.C.]	Yes
Invoices for medications purchased from a Florida licensed wholesaler/distributor are retrievable for inspection. [499.005(14), F.S.] *AmerisourceBergen*	Yes
Facility engaged in non-sterile office use compounding for human use is registered with FDA as an outsourcing facility. [64B16-27.700(3)(g), F.A.C.]	N/A
Signage indicating that any patient receiving testing, screening, or treatment services is advised to seek follow-up care from his or her primary care physician. [465.1895(9), F.S.]	N/A
Human Trafficking signage is posted in a conspicuous place accessible to employees that is at least 11 inches by 15 inches in size, printed in a clearly legible font and in at least a 32-point type which gives instructions in English and Spanish on how to report to the National Human Trafficking Resource Center. [456.0341, F.S.]	Yes

Requirements for Dispensing Controlled Substances

Controlled substance inventory taken on a biennial basis and available for inspection. [893.07(1)(a), F.S.] [21CFR1304.11] *March 4th, 2025 Close of Business*	Yes
DEA 222 forms properly completed or records of CSOS orders electronically completed, linked to the original order, archived and retrievable. [893.07(2), F.S.] [21CFR 1305.13(e)] [21CFR1305.22(g)]	Yes
Controlled substance records and prescription information in computer system are retrievable and maintained for 4 years. [465.022(12)(a), F.S.] [64B16-28.140, F.A.C.] [21CFR1306.22] [21CFR1304.04]	N/A
Pharmacy is reporting to law enforcement any instance of fraudulent prescriptions within 24 hours or close of business on next business day of learning of instance. Reports include all required information. [465.015(3), F.S.]	N/A
Record of theft or significant loss of all controlled substances is being maintained and reported to the sheriff and board within 24 hours of discovery. [893.07(5)(b), F.S.] [465.022(11)(b), F.A.C.]	N/A
Pharmacy is reporting to the PDMP within 24 hours of dispensing controlled substance. [893.055(4)(3)(a), F.S.]	Yes

Pharmacy Ships Medicinal Drugs to Patients [64B16-28.10801, F.A.C]

INV359 - Community Requirements

Insp # 199614 st luke lab File # 26858

Pharmacy has policies and procedures in place to provide instructions to the patient on reporting concerns with delivery and storage of medicinal drugs.	
Pharmacy has policies and procedures in place to ensure that medicinal drugs are not adulterated at the time of receipt by the patient or their agent.	

Automated Pharmacy System [465.0235, F.S.]

Pharmacy maintains a record of the medicinal drugs dispensed, including the identity of the pharmacist responsible for verifying the accuracy of the dosage and directions and providing patient counseling.	
Pharmacy maintains written policies and procedures to ensure the proper, safe, and secure functioning of the automated pharmacy system for a minimum of 4 years.	

Pharmacy engages in Centralized Prescription Filling [64B16-28.450, F.A.C.]

Pharmacies have the same owner or have a written contract specifying the services to be provided by each pharmacy.	
The central fill pharmacy is identified by name and address or a by a code available at the originating pharmacy.	
Current P&P Manual available for inspection designating at minimum: types of medications that may be filled, procedures for communicating orders, procedures for securely transporting the filled prescriptions.	
If a controlled substance, the word "central fill" appears on the face of the original prescription.	
The originating pharmacy keeps a record of receipt of the filled prescription, including the date of receipt, method of delivery and the name of the originating pharmacy's employee accepting delivery.	

Internet Pharmacy

A toll-free telephone number is provided to facilitate communication between patients in this state and a pharmacist at the pharmacy who has access to the patient's records. [465.0197 (3)(e), F.S.]	
Toll free number is disclosed on the label affixed to each container of dispensed medicinal drugs. [465.0197(3)(e), F.S.]	
Documentation of a valid, unexpired pharmacy license, permit or registration in the state in which the dispensing facility is located and from which the medicinal drugs shall be dispensed. [465.0197(3)(a) F.S]	

HIV Infection Prevention Drugs

Pharmacists are screening, ordering or dispensing HIV postexposure prophylaxis drugs under a written Collaborative Practice Agreement. [465.1861, F.S.]	
An access-to-care plan has been submitted to the board office and is in place to assist patients in gaining access to appropriate care settings when they present to a pharmacist for HIV screening and indicate that they lack regular access to primary care. [465.1861, F.S.]	

Remarks:

Routine inspection completed with Shady John. Operating requirements met.

I have read and have had this inspection report and the laws and regulations concerned herein explained, and do affirm that the information given herein is true and correct to the best of my knowledge.

Special Sterile Compounding

ST LUKE LAB	License # 32747

DESIGNATED PERSON: A designated person(s) is identified who is responsible and accountable for the performance and operation of the facility and personnel involved in the preparation of CSPs. [USP 797 Section 1.1.3] *Designated Person: Andrew Mesiha- has training in Critical Point around June to Nov 2024, and Medisca LP3 class*	Yes
IMMEDIATE USE COMPOUNDING: When preparing immediate use preparations, written SOPs are in place for all requirements and all criteria are met including 1. aseptic technique, processes, and procedures; and, 2. personnel are trained and demonstrate competency in aseptic processes as they relate to assigned tasks and SOP's, 3. the preparation is performed in accordance with evidence-based information for physical and chemical compatibility of the drugs, 4. the preparation involves not more than 3 different sterile products, 5. Any unused starting component from a single-dose container is discarded, 6. Administration begins within 4 hours following the start of preparation and, 7. Unless directly administered by the preparer or administration is witnessed by the preparer, the CSP is labeled with the names and amounts of all active ingredients, the name or initials of the preparer and the 4 hour period within which administration must begin. [USP 797 Section 1.3] *Cleanroom Suite, hazardous and non-hazardous and non-sterile compounding suite*	N/A
BAG & VIAL SYSTEM: Docking of vial and bag systems for future activation and administration is performed in an ISO 5 environment and BUDs are not longer than those specified in the manufacturer's labeling. [USP 797 Section 1.4]	N/A
REPACKAGING: Repackaging of sterile products or preparations from its original container into another container are prepared according to all applicable USP 797 requirements. [USP 797 Section 1.1.2]	N/A

B. COMPONENT BUDs (Single and Multi-dose Containers) – ALL CATEGORIES

SINGLE DOSE CONTAINERS (SDCs): SDCs are entered or punctured only in an ISO Class 5 or cleaner air and are used up to 12 hours after initial entry or puncture if the labeled storage requirements during that 12-hour period are maintained. [USP 797 Section 15.1] *Not currently compounding, will be per Policy 6.1 'Beyond Use Date'*	N/A
AMPULES: Opened SINGLE DOSE AMPULES are used immediately and not stored for any time period. [USP 797 Section 15.1]	Yes
MULTIDOSE CONTAINERS (MDCs): Upon initially entering or puncturing a conventionally manufactured MDC, the MDC is not used for more than 28 days unless otherwise specified by the manufacturer on the labeling. [USP 797 Section 15.2] *Not currently compounding- Example will be with Glutathione Inj*	N/A
PHARMACY BULK PACKAGES: Conventionally manufactured pharmacy bulk packages are entered or punctured only in an ISO Class 5 PEC and must be used according to the manufacturer's labeling. [USP 797 Section 15.3] *Facility has Policy 6.1 'Beyond Use Date' per manufacturers labels*	Yes
SINGLE DOSE COMPONENT CSPs & STOCK SOLUTIONS: When single-dose CSPs or CSP stock solutions are used as a component to compound additional CSPs, the original compounded single-dose component CSP or CSP stock solution is entered or punctured in ISO Class 5 or cleaner air and is stored under the conditions upon which its BUD is based (e.g., refrigerator or controlled room temperature). Once punctured, the component CSP is used for sterile compounding for up to 12 hours or its assigned BUD, whichever is shorter, and any remainder is discarded. [USP 797 Section 16.2] *Policy 6.1 'Beyond Use Date' Section 7*	N/A

C. CSP LABELING – ALL CATEGORIES

CSP LABEL REQUIREMENTS: CSP Immediate container label prominently and legibly displays 1) assigned internal identification number; 2) active ingredient(s) and their amount(s), or concentration(s); 3) storage conditions if other than controlled room temperature; 4) BUD; 5) dosage form; 6) total amount or volume; 7) statement if CSP is a single dose container (when space permits) or multi-dose container. Labeling of CSP displays 1) route of administration, 2) special handling instructions, 3) warning statements, and the compounding facility name and contact information if the CSP is sent outside of the facility in which it was compounded. [USP 797 Section 13] *Please add dosage form on label-example solution, Label does not state 'Discard 28 days after first use' of if vial is a multi-dose container.*	No
ADDITIONAL REQUIREMENTS FOR A CLASS II OR III FACILITY: 1) Identification of responsible compounding personnel and/or dispensing pharmacist;2) labels for batch-prepared CSPs must also include: Control or lot number, auxiliary labeling (including precautions); and device-specific instructions. Patient specific medications must also include patient's name, location the medication is to be delivered to and directions for use. [USP 797 Section 13] [F.A.C.64B16-28.108(10)] *Facility is a retail establishment*	N/A
LABELING SOP: SOPs describe labeling procedures and are followed to prevent labeling errors and CSP mix-ups. [USP 797 Section 13] *SOP 6.12 requires the dosage form to be stated on sample label of Glutathione inj. Sodium Bicarbonate 8.4% inj does state solution on label. Please be consistent. Per SOP 6.12 'Labeling of CSP', dosage form is required.* *Per USP <797>, 2023 version, "The label on each immediate container of the CSP must, at a minimum, display prominently and legibly the following information: Assigned internal identification number (e.g., barcode, prescription, order, or lot number)* *Active ingredient(s) and their amount(s), activity(ies), or concentration(s)* *Storage conditions if other than controlled room temperature BUD* *Dosage form"*	No
LABEL VERIFICATION: CSP labels are verified to ensure that they conform with the prescription or medication order, MFR (if required), and the CR. [USP 797 Section 13] *Has not actively compounded or dispensed at this time.* *Will be in Si software from Pharmetric*	N/A

D. PERSONNEL PREPARATION & OBSERVATION – ALL CATEGORIES

UNNECESSARY ITEMS: Personnel remove outer garments (e.g., bandanas, coats, hats, jackets, sweaters, vests); cosmetics, and all hand, wrist, and other exposed jewelry, including piercings that may interfere with effectiveness of garbing. Items not necessary for compounding (e.g., food, drinks, mints, gum, earbuds, headphones) are not introduced into the compounding environment. Accommodations are documented. [USP 797 Section 3.1]	Yes
NAILS: Nails are clean and trimmed. Nail products (e.g., polish, artificial nails, and extenders) are not worn. Personnel clean under nails under warm running water with a disposable nail cleaner. Hands and forearms are washed with soap and water for at least 30 seconds prior to entering a compounding area. [USP 797 Section 3.2]	Yes
REQUIRED PPE GARBING ORDER & STORAGE: Personnel garb (don and doff) in an order that reduces risk of contamination per SOP. Required garb, manner of storage, and order or garbing is documented in SOP's. The minimum required PPE when preparing CSPs includes a garment with sleeves that fit around wrists and enclosed neck, shoe covers, head/facial hair cover, face mask, and sterile powder-free gloves. All PPE is low lint for Category 1 & 2 compounding or sterile if Category 3. Gowns and other garb are stored in a manner that minimizes contamination (e.g., away from sinks) and within a classified area or SCA. [USP 797 Section 3.3] *Gerbing was done using 3XL Coverall-incorrect size and RPt needs to be re-educated on proper donning so as to avoid touching the wrist part of the sleeves.*	No
INAPPROPRIATE HAND HYGIENE PRACTICES: Brushes and hand dryers are not used, and soap containers are not refilled or topped off. [USP 797 Section 3.2] *RPt observed proceeded to perform hand hygiene using brush bristles on hands.*	No
ALCOHOL-BASED HAND RUB: Hands are sanitized with alcohol-based hand rub prior to donning gloves. Handrub is used prior to donning garb when hand hygiene is done outside of a classified area. [USP 797 Section 3.3] *Hands free Avagard*	Yes

STERILE GLOVES USED: Sterile gloves are donned in classified room or SCA. Skin is not exposed inside ISO 5 PEC (e.g., gloves are not donned or doffed). [USP 797 Section 3.3] *Contec Critigear ASTM 6978 sterile gloves*	Yes
SANITIZATION OF STERILE GLOVES: Sterile 70% IPA is applied to gloves prior to compounding and regularly throughout the compounding process. [USP 797 Section 3.3]	Yes
SANITIZATION OF ITEMS INTRODUCED INTO PEC: Items are wiped with sterile 70% IPA and sterile low-lint wipers just prior to being introduced into the PEC and allowed to dry before use. [USP 797 Section 8.2]	Yes
CRITICAL SITES (e.g., vial stoppers, ampule necks, and intravenous bag septum's) are wiped with sterile 70% IPA in the PEC to provide both chemical and mechanical actions to remove contaminants. The sterile 70% IPA is allowed to dry before personnel enter or puncture stoppers and septum's or break the necks of ampules. [USP 797 Section 8.3] *Pharmacist Choice gamma sterilized alcohol wipes*	Yes
MATERIALS AND EQUIPMENT DISINFECTION: Before any item is introduced into the clean side of anteroom(s), placed into pass-through chamber(s), or brought into the SCA, it is wiped with a sporicidal disinfectant, EPA-registered disinfectant, or sterile 70% IPA using low-lint wipers by personnel wearing gloves. Dwell time is followed. [USP 797 Section 8.1 & 9.1] *As observed when passing goggles into cleanroom*	Yes

E. EQUIPMENT, SUPPLIES, & COMPONENTS – ALL CATEGORIES

DAILY ACD ACCURACY ASSESSMENT: An accuracy assessment is conducted for Automated Compounding Devices (ACDs) or similar equipment before the first use and again each day the equipment is used to compound CSPs. A daily record of accuracy measurements is maintained. Corrective actions are implemented if accuracy measurements are outside of manufacturer's specifications. [USP 797 Section 9.1] *2 Baxter Repeater pumps dedicated to each compounding environment per SOP 6.9 'Operation, Cleaning, and Maintenance of Baxter Repeater Pump'. Documentation will be maintained in 797 tools software.*	Yes
EQUIPMENT SOPs: Written SOPs for the calibration, maintenance, cleaning, and use of equipment are established and are based on the manufacturer's recommendations. Procedures are followed and records are maintained. [USP 797 Section 9.1] *Per SOP* *FL Biomedical Associates Repair calibrated the following equipment on Oct 24, 2024:* *Yamato Dry Heat Oven Model DKN602C SN BG300052* *Tuttnauer Autoclave- Model: 2540EA SN* *3 Incubators SN 0201-1616, SN L-16933, SN L-16932* *Insignia Fridge SN 24F06C00241* *Armens calibrated the 3 Ohaus Weighing scales SN AX223/E and Greystone EM monitoring Device SN CR3C (total of 6 monitoring devices in 6 cleanrooms) March 1, 2025* *2 Repeater pumps calibrated by Plexus Oct 23, 2024* *Medrep certified cleanroom suite, PEC's SEC's Jan 2025* *In-house Viable air sampling device Qualisair MicroBio SN 30152581591 last calibrated Oct 28, 2024* *Guardian 5000 hot plate stirrer purchased calibrated from Medisca 9-16-24* *PH meter came calibrated 2-13-25* *Autoclave SN 215754 validated with 11 Attest BI's and a positive control by Pharmetric 3-3-25* *Dry Heat Oven Depryogenation Validation Report from Pharmetric using Endosafe PTS Cartridges demonstrated a 5.3 log reduction in endotoxins per 3-3-25 report*	Yes

F. SEGREGATED COMPOUNDING AREA: Category 1

CATEGORY 1 MAXIMUM BUDs & COMPOUNDING AREA REQUIREMENTS: Category 1 CSPs are compounded in an ISO class 5 PEC located within a SCA and are assigned a BUD of 12 hours or less at controlled room temperature or 24 hours or less when refrigerated. [USP 797 Section 1.5, 4.2.1]	
DEDICATED AREA FOR SCA: The SCA is separated from areas not directly related to compounding, and all surfaces (walls, floors, counters, and equipment) are clean, uncluttered, and dedicated to compounding. [USP 797 Section 4.2.1]	
SCA LOCATION: The SCA is located away from unsealed windows, doors that connect to the outdoors, and traffic flow, all of which may adversely affect the air quality in the PEC. SCA is not located where environmental control challenges (e.g., restrooms, warehouses, or food preparation areas) could negatively affect the air quality of the PEC within the SCA. A sink is not located within 1 meter of PEC. [USP 797 Section 4.2.1]	
ITEMS WITHIN SCA: Only furniture, equipment, and other materials necessary for performing compounding activities are located within the SCA. [USP 797 Section 4.2.1]	

G. FACILITIES & SECONDARY ENGINEERING CONTROLS – Categories 2 and 3

STERILE SUITE CONSTRUCTION: The ISO-classified anteroom and buffer room are separated from the surrounding unclassified areas of the facility by fixed walls and doors, and controls are in place. [USP 797 Section 4.2.1]	Yes
HEPA FILTERED AIR: Air supplied to the cleanroom suite is introduced through HEPA filters located in the ceiling of the buffer room and anteroom. [USP 797 Section 4.2.1]	Yes
AIR RETURNS: Air returns in the cleanroom suite are low on the wall unless a visual smoke study demonstrates an absence of stagnant airflow. [USP 797 Section 4.2.1] *Low wall vent returns*	Yes
LINE OF DEMARCATION: The anteroom has a line of demarcation to separate the clean side from the dirty side. [USP 797 Section 4.2.1]	Yes
SURFACES & WALLS: The surfaces of ceilings, walls, floors, doors, door frames, fixtures, shelving, work surfaces, counters, and cabinets in the classified area are smooth, impervious, free from cracks and crevices, and non-shedding. Walls are constructed of/or covered with durable material. [USP 797 Section 4.3.1] *3 inch insulated polyvinyl material*	Yes
CEILINGS & FLOORS: Inlaid panels of ceilings are caulked around each panel to seal them to the support frame. Junctures between the ceiling and the walls and between the walls and the floor are sealed to eliminate cracks and crevices where dirt can accumulate. Floors include coving to the sidewall, or the juncture between the floor and the wall are caulked. [USP 797 Section 4.3.1] *Flushed epoxy juncture where floor meets wall*	Yes
LEDGES & OVERHANGS: Overhangs and ledges are easily cleanable, and the exterior lens surface of ceiling light fixtures are smooth, mounted flush, and sealed. [USP 797 Sections 4.3.1]	Yes
FURNITURE, EQUIPMENT, & MATERIALS: Only furniture, equipment, and other materials necessary for performing compounding activities are permitted in a classified area or SCA. Tacky mats are not placed within ISO-classified areas. Carts used to transport components or equipment into classified areas are constructed from nonporous materials with cleanable casters and wheels. [USP 797 Sections 4.2.1 & 4.5] *Steel bench for garbing in garbing room*	Yes

TEMPERATURE & HUMIDITY MONITORING: Temperature and humidity in the cleanroom suite are controlled through a heating, ventilation, and air conditioning (HVAC) system. The temperature and humidity are monitored in each room of the cleanroom suite each day that compounding is performed, either manually or by a continuous recording device. They are documented at least once daily or stored in the continuous recording device and are retrievable and are reviewed as described in the facility's SOP. [USP 797 Section 4.2] *See clipboard for monthly log 'Sterile Compounding Area Environment Monitoring Log'*	Yes
PRESSURE DIFFERENTIATION MONITORING & DOCUMENTATION: Facility maintains a minimum differential positive pressure of 0.020-inch water column between the nonhazardous buffer room to anteroom and anteroom to unclassified area. A pressure differential monitoring device is used to continuously monitor the pressure differentials. Quantitative results from the pressure monitoring device are reviewed and documented at least daily on the days when compounding is occurring. [USP 797 Sections 4.2.5] *On this log, pressure is expressed in mm water column*	Yes
PEC LOCATION: PECs are located in a buffer room in a manner that minimizes conditions that could increase the risk of microbial contamination (strong air currents, personnel traffic, or air streams from HVAC system(s)) and allows for cleaning around the PEC. [USP 797 Sections 4.2.2 & 4.2.3]	Yes
INTEGRATED VERTICAL LAMINAR FLOW ZONES: IVLFZ is separated from ISO Class 7 area with a physical barrier and there is full coverage of HEPA filters above the work surface. [USP 797 Section 4.2.3]	N/A

H. CERTIFICATION AND RECERTIFICATION – ALL CATEGORIES

PEC & SEC CERTIFICATION: PECs are certified initially and every 6 months to meet ISO Class 5 or better conditions, during dynamic operating conditions. SECs are certified initially and every 6 months to meet ISO Class 7 or 8 or better conditions, during dynamic operating conditions (including presterilization activities if applicable). Anterooms providing access to positive-pressure buffer rooms are at least ISO 8 and at least ISO 7 for anterooms providing access to negative-pressure buffer rooms. ISO Class 7 rooms maintain a minimum of 30 total HEPA-filtered ACPH during dynamic operating conditions, at least 15 ACPH come from the HVAC through HEPA filters located in the ceiling. ISO Class 8 rooms maintain a minimum of 20 total HEPA-filtered ACPH during dynamic operating conditions; 15 ACPH must come from the SEC. The ACPH from HVAC, ACPH contributed from the PEC, and the total ACPH are documented on the certification report. HEPA filter integrity testing for both SECs & PECs is conducted initially and every 6 months as part of total particle testing. Classified areas are recertified when changes occur that could affect airflow or air quality [USP 797 Sections 4.1, 4.2.4, 4.2.6, & 5.0] *Dec 30, 31, and repeated by Medrep Jan 2 & 8, 2025 due to initial failure of Hepa filter leak test. Dynamic for hoods.* *Non-HD suite: + pressure sterile prep room (ISO 8-ACPH of 21.13), + pressure ante gown-in room with bench(ISO 7-ACPH of 36.96), + pressure buffer room (ISO 7-ACPH of 50.51)* *HD suite: + pressure gown in room (ISO 7 ACPH of 57.55), - pressure buffer room (ISO 7-ACPH of 60.86)* *PT#1 -between non-HD prep and non-HD buffer (ISO 7), PT#2- between HD prep and HD buffer room (ISO 7)* *PEC's: Air Science Purair Horizontal flow hood SN HLF000645 (ISO 5)- certified Nov 5, 6, 2024 certified under dynamic conditions* *Esco Class II A2 Vertical flow BSC SN 2024-204033 (ISO 5)*	Yes
DOCUMENTATION OF PERSONNEL PRESENT DURING CERTIFICATION: The number of personnel present in each PEC and SEC during total particle counts and dynamic airflow smoke-pattern tests is documented on the certification report. [USP 797 Section 5.0] *Per Medrep documentation no personnel present for all certifications from Nov 5,6, 2024, Dec 30,31, 2024 and Jan 2, 8, 2025*	No
PEC DYNAMIC SMOKE PATTERN TEST: Smoke pattern tests are performed under dynamic conditions initially to demonstrate minimal disruption in airflow and repeated if equipment is placed in a different location. Smoke pattern tests are performed under dynamic conditions every 6 months to demonstrate unidirectional airflow and sweeping action over and away from the preparation(s). [USP 797 Section 5.0] *Single vial simulated to withdraw contents with a needle to transfer is not considered dynamic. Please redo smoke study in the future to demonstrate in situ air pattern over simulated vials close to what you are producing.* *Recorded smoke study Jan 17, 2025.*	No
ROBOTICS / ROBOTIC ENCLOSURES: Robotic enclosures used as a PEC or placed within a PEC have a dynamic airflow smoke pattern test is performed initially and at least every 6 months that confirms 1) the robotic device is properly integrated into the facility, 2) there is no turbulence or refluxing at any critical site(s), 3) room air does not enter the PEC where sterile products and/or preparations may be exposed, and 4) all processes can be performed without introducing contamination to the DCA(s). [USP 797 Section 4.2.3]	N/A
MONITORING DEVICE CERTIFICATION: Temperature and humidity monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. [USP 797 Section 4.2] *Armens calibrated the Greystone EM monitoring Device SN CR3C (total of 6 monitoring devices in 6 cleanrooms) March 1, 2025*	Yes
CONTAINMENT DEVICES USED FOR PRESTERILIZATION PROCEDURES: CVEs, BSCs, or CACIs used for presterilization procedures are certified at least once every 6 months. Presterilization procedures do not adversely affect the required air quality of the SEC as demonstrated during certification under dynamic operating conditions. [USP 797 Section 4.2.6] *Jan 8, 2025*	Yes
CERTIFICATION REPORT REVIEW BY DESIGNATED PERSON: All certification and recertification records are reviewed by the designated person(s). A corrective action plan is implemented and documented in response to any out-of-range results on certification report and data reviewed to confirm that the actions taken have been effective. [UPS 797 Section 5.0] *No document provided clarifying that the Designated Person has reviewed all 3 certification reports from Nov, Dec, Jan.*	No

I. RABS

LOCATION: If used to prepare Category 2 or Category 3 CSP's RABS are located in a cleanroom suite with an ISO Class 7 or better buffer room with an ISO Class 8 or better anteroom. [USP 797 Section 4.2.3]	
RECOVERY TIME: When a RABS is used, the recovery time after opening the transfer chamber to achieve ISO Class 5 air is documented and internal procedures are developed to ensure that adequate recovery time is allowed after opening and closing the RABS. [USP 797 Section 4.2.3]	
STERILE GLOVES: are worn over gloves attached to RABS sleeves. [USP 797 Section 3.3]	

J. CATEGORY 2 CSPs WITHOUT STERILITY TESTING

CATEGORY 2 COMPOUNDING ENVIRONMENT: Category 2 CSPs are compounded in an ISO class 5 PEC located within an ISO classified anteroom and buffer room. [USP 797 Sections 4.1 & 14.3] *Pharmacy qualifies for sterile to sterile Cat 2 compounding*	Yes
CATEGORY 2 BUDs FROM STERILE COMPONENTS WITHOUT STERILITY TESTING: Category 2 CSPs compounded aseptically from all sterile starting components and in the absence of sterility testing do not exceed the following BUDs: 4 days room temperature, 10 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *Not currently compounding, but future plans for Gentamicin and Amikacin compounding possibly from sterile to sterile for dispensing patient-specific for institutional and home infusion dispensing. (See SPE permit)*	N/A
CATEGORY 2 BUDs FROM NONSTERILE COMPONENTS WITHOUT STERILITY TESTING: Category 2 CSPs compounded aseptically from one or more nonsterile starting components and in the absence of sterility testing do not exceed the following BUDs: 1 day room temperature, 4 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *See table in Section 5 B of SOP 6.1 'Beyond Use Dates'*	N/A

K. CATEGORY 2 EXTENDED BUD REQUIREMENTS

CATEGORY 2 BUDs FOR ASEPTICALLY PROCESSED CSPs WITH STERILITY TESTING: Category 2 CSPs compounded aseptically, and which have passed sterility testing do not exceed the following BUDs: 30 days room temperature, 45 days refrigerated, or 60 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *New business, review of Glutathione MFR, demonstrates a refrigerated BUD of 45 days at 2-8C. See SOP 6.1 'Beyond Use Date'*	N/A
CATEGORY 2 BUDs FOR TERMINALLY STERILIZED CSPs WITHOUT STERILITY TESTING: Category 2 CSPs terminally sterilized and in the absence of sterility testing do not exceed the following BUDs: 14 days room temperature, 28 days refrigerated, or 45 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3] *At this time pharmacy does not have plans to terminally sterilize CSP's*	N/A
CATEGORY 2 BUDs FOR TERMINALLY STERILIZED CSPs WITH STERILITY TESTING: Category 2 CSPs terminally sterilized, and which have passed sterility testing do not exceed the following BUDs: 45 days room temperature, 60 days refrigerated, or 90 days frozen. A shorter BUD is assigned when the stability of the CSP or its components is less than the maximum BUDs stated above. [USP 797 Section 14.3]	N/A
ANTIMICROBIAL EFFECTIVENESS TESTING FOR MULTI-DOSE CSPs: Aqueous multiple-dose CSPs (e.g., injectables and ophthalmics) pass USP <51> compliant antimicrobial effectiveness testing once for each unique formulation and each container closure system in which it is packaged. Bracketing studies are allowed. [USP 797 Section 14.5 & 16.1] *Has not been completed for Glutathione Inj-pharmacy has not initiated testing at this time-please ensure this is completed prior to release*	N/A
CONTAINER CLOSURE TESTING: Container closure integrity testing is performed once for each unique CSP formulation and container closure system in which it is packaged. For multi-dose (i.e., preserved CSPs), container integrity testing is performed per fill volume for each unique CSP formulation and container closure system. [USP 797 Sections 14.3.3 & 14.5] *Required for all container closures compounded by the firm -nothing released yet*	N/A
MULTI-DOSE, NON-PRESERVED AQUEOUS CSPs: Multi-dose, non-preserved aqueous CSPs (i.e., topical, or ophthalmic solutions) are assigned are prepared as a Category 2 CSP, for use by a single patient, and labeled to indicate that once opened, the CSP must be discard after 24 hours if stored at controlled room temperature or 72 hours when stored under refrigeration. [USP 797 14.5] *SOP 6.1 'Beyond Use Date' Section 5.6.1*	N/A
MULTI-DOSE CSPs USED AS A COMPONENT: Meet the criteria for anti-microbial effectiveness testing (see <51>) if aqueous, are stored under the conditions upon which the BUD is based, Multiple-dose CSP after initially entered or punctured, are not used for longer than the assigned BUD or 28 days, whichever is shorter. [USP 797 Sections 14.5 & 16.1] *New Business -has not initiated compounding, but is contracted with Pharmetric*	N/A
OUTSOURCED STERILITY TESTING: Sterility testing is performed for all Category 2 CSPs assigned a BUD requiring sterility testing according to USP <71> or a validated alternative and noninferior method. Membrane Filtration as described in USP <71> is the preferred method when the formulation allows. [USP 797 Section 12.2] *Will be per Pharmetric as supported by policy*	N/A
INHOUSE STERILITY TESTING: Sterility testing is according to USP <71> or a validated alternative and noninferior method. Membrane filtration is used if appropriate and filters are rinsed according to USP <71>. Direct inoculation is done only when membrane filtration cannot be carried out. Volume inoculated does not exceed 10% of the culture media volume. Growth promotion test has been done on the media with the 5 specified organisms (not more than 100 CFU) according to USP <71>. TSB or SCD is incubated at 20-25C for 14 days; FTM is incubated at 30-35C for 14 days. (2 incubators present).	N/A
METHOD SUITABILITY TEST: A Method Suitability Test (or equivalent validation for alternative testing methods) is performed to validate suitability of the sterility testing method. [USP 797 Section 12.2] *Policy 6.1 -to be done with eech formulation using Pharmetric lab. Has not initiated at this time.*	N/A
MAXIMUM BATCH SIZE: The maximum batch size for all CSPs requiring sterility testing is 250 final yield units. [USP 797 Section 12.2] *Has not exceeded 70 vials of simulation of media fill representing Glutathione 100mg/ml 10ml vials. Has not initiated compounding for release.*	Yes
INVESTIGATION OF STERILITY TEST FAILURES: Sterility tests resulting in failure undergo prompt investigation into possible causes and requires identification of the microorganism(s) as well as evaluation of sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. Impact to other CSPs is assessed. Investigation and resulting corrective actions are documented. [USP 797 Section 12.2] *SOP 8.2 'Responding to Out of Specification test'*	N/A
STERILITY TESTING QUANTITY & VOLUME DETERMINATION: The minimum quantity of each container tested for sterility is per USP <71> Table 2 and the number of containers tested in relation to the batch size is per USP <71> Table 3. For 1-39 CSPs compounded as single batch, sterility testing is performed on a number of containers or units equal to 10% of the number of CSPs prepared rounded to the next whole number. [USP 797 Section 12.2] *SOP 6.11 'Sterility'. Has not initiated compounding yet.*	N/A
ENDOTOXIN TESTING: Category 2 Injectable CSPs compounded from one or more nonsterile component(s) and assigned a BUD that requires sterility testing are tested for bacterial endotoxins. [USP 797 Section 12.3] *Has not initiated compounding. Policy 6.11 "Sterility" requires Endotoxin testing.*	N/A
ENDOTOXIN LIMITS: In the absence of a bacterial endotoxin limit in an official USP–NF monograph or other CSP formula or scientifically supported source, the CSP does not exceed the endotoxin limit calculated as described in USP <85> for the appropriate route of administration for humans or largest recommend dose per weight for nonhuman species. [USP 797 Section 12.3] *SOP 6.11 'Sterility'*	N/A

L. CATEGORY 3 CSPs, BUDs, & RELATED REQUIREMENTS

CATEGORY 3 REQUIREMENTS: All requirements associated with Category 3 compounding (e.g., garbing, cleaning, environmental monitoring) apply to all personnel entering the buffer room where Category 3 CSPs are compounded and always apply regardless of whether Category 3 CSPs are compounded on a given day. [USP 797 Section 14.4.2]	
STERILE/SINGLE USE GARB: When compounding Category 3 CSPs, skin is not exposed in buffer room (i.e., face and neck are covered) and all low lint outer garb is sterile, including sterile sleeves over RABS gauntlet sleeves. Disposable garb items are not reused. [USP 797 Section 3.3]	
STERILIZED/REUSABLE GARB: Non-disposable garb is not reused without being laundered and resterilized with a validated cycle. Disinfection procedures described in facility SOPs are followed before reusing goggles, respirators, and other equipment. [USP 797 Section 3.3]	
CATEGORY 3 BUDs FOR ASEPTICALLY PROCESSED CSPs: Category 3 CSPs aseptically processed, sterility tested, and passing all applicable tests (including stability indicating assay, endotoxin, and other dosage form appropriate tests) do not exceed the following BUDs: 60 days room temperature, 90 days refrigerated, or 120 days frozen. Shorter BUDs are assigned when physical or chemical stability of the CSP is less than the maximum allowable Category 3 BUDs for aseptically processed CSPs. [USP 797 Section 14.4.3]	
CATEGORY 3 BUDs FOR TERMINALLY STERILIZED CSPs: Category 3 CSPs aseptically processed, sterility tested, and passing all applicable tests (including stability indicating assay, endotoxin, and other dosage form appropriate tests) do not exceed the following BUDs: 90 days room temperature, 120 days refrigerated, or 180 days frozen. Shorter BUDs are assigned when physical or chemical stability of the CSP is less than the maximum allowable Category 3 BUDs for terminally sterilized CSPs. [USP 797 Section 14.4.3]	
MAXIMUM BATCH SIZE: Category 3 CSP batch sizes do not exceed 250 final yield units. [USP 797 Section 12.2]	

STABILITY INDICATING ASSAYS: All Category 3 CSP formulations are supported by data obtained using a validated stability-indicating analytical method that can distinguish active ingredients from degradants and impurities and quantify the amount of active ingredient. CSPs are prepared according to the exact formulation, components, and packaged in a container closure system of the same materials of composition. Facilities have documentation of the stability study, its results, and the method validation available for review. [USP 797 Section 14.3.3]	
STERILITY TESTING: All category 3 CSPs and batches undergo sterility testing performed according to USP <71> or a validated alternative and noninferior method. [USP 797 Sections 12.2 & 14.4.4]	
METHOD SUITABILITY TEST: A Method Suitability Test (or equivalent validation for alternative testing methods) is performed to validate suitability of the sterility testing method for each formulation. [USP 797 Section 12.2]	
STERILITY TESTING QUANTITY & VOLUME DETERMINATION: The minimum quantity of each container tested for sterility is per USP <71> Table 2 and the number of containers tested in relation to the batch size is per USP <71> Table 3. For 1-39 CSPs compounded as single batch, sterility testing is performed on a number of containers or units equal to 10% of the number of CSPs prepared rounded to the next whole number. [USP 797 Section 12.2]	
INVESTIGATION OF STERILITY TEST FAILURES: Sterility tests resulting in failure undergo prompt investigation into possible causes and requires identification of the microorganism(s) as well as evaluation of sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. Impact to other CSPs is assessed. Investigation and resulting corrective actions are documented. [USP 797 Section 12.2]	
ENDOTOXIN TESTING: Category 3 injectable CSPs compounded from one or more nonsterile component(s) are tested for bacterial endotoxins. [USP 797 Section 12.3]	
ENDOTOXIN LIMITS: In the absence of a bacterial endotoxin limit in an official USP–NF monograph or other CSP formula or scientifically supported source, the CSP does not exceed the endotoxin limit calculated as described in USP <85> for the appropriate route of administration for humans or largest recommend dose per weight for nonhuman species. [USP 797 Section 12.3]	
PARTICULATE MATTER TESTING: Category 3 injectable CSPs undergo USP <788> (Particulate Matter in Injections) and ophthalmic solutions undergo USP <789> (Particulate Matter in Ophthalmic Solutions) test once per formulation with acceptable results. [USP 797 Section 14.3.3]	
ANTIMICROBIAL EFFECTIVENESS TESTING FOR MULTI-DOSE CSPs: Aqueous multiple-dose CSPs (e.g., injectables and ophthalmic) pass USP <51> compliant antimicrobial effectiveness testing once for each unique formulation and each container closure system in which it is packaged. Bracketing studies are allowed. [USP 797 Section 14.5 & 16.1]	
CONTAINER CLOSURE TESTING: Container closure integrity testing is performed once for each unique CSP formulation and container closure system in which it is packaged. For multi-dose (i.e., preserved multi-dose CSPs), container closure integrity testing is also performed per fill volume for each unique CSP formulation and container closure system. [USP 797 Sections 14.3.3 & 14.5]	
MULTI-DOSE, NON-PRESERVED AQUEOUS CSPs: Multi-dose, non-preserved aqueous CSPs (i.e., topical, or ophthalmic solutions) are prepared for use by a single patient, and labeled to indicate that once opened, the CSP must be discard after 24 hours if stored at controlled room temperature or 72 hours when stored under refrigeration. [USP 797 14.5]	
MULTI-DOSE CSPs USED AS A COMPONENT: Meet the criteria for anti-microbial effectiveness testing (see <51>) if aqueous, are stored under the conditions upon which the BUD is based, Multiple-dose CSP after initially entered or punctured, are not used for longer than the assigned BUD or 28 days, whichever is shorter. [USP 797 Sections 14.5 & 16.1]	

M. PERSONNEL TRAINING & COMPETENCIES - ALL CATEGORIES

TRAINING PROGRAM & SOP: Facility maintains a written training program and corresponding SOP which defines required trainings, frequency of training and the process for evaluating the performance of individuals who compound, have direct oversight of compounding personnel, perform in-process checks, final verification and dispensing of CSP's. The training program equips personnel with the appropriate knowledge and training in the required skills necessary to perform their assigned tasks. [USP 797 Section 2] *per SOP 4.2 "Training, Conduct and Competency of Sterile Compounding Personnel"*	Yes
INITIAL DIDACTIC TRAINING & SKILLS ASSESSMENT: Before beginning to compound CSPs independently or have direct oversight of compounding personnel, personnel complete training and can demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions as applicable to their assigned job functions. [USP 797 Section 2.1] *Critical Point modules completed for SM, RPt and AM*	Yes
INITIAL GLOVED FINGERTIP & HAND HYGIENE/GARBING COMPETENCY: Before beginning to compound independently or have direct oversight of compounding personnel, personnel successfully complete an initial gloved fingertip (GFT) competency no fewer than 3 separate times, with a documented visual audit while performing hand hygiene and garbing procedures. GFT samples are collected before applying sterile 70% IPA to gloves. [USP 797 Section 2.2] *Initial GFT for AM and SM started on 12-12-24, completed on 12-19-24. This is a future Cat 2 compounder. Completed 3 separate times using Hardy TSA with L&T plates P34 refrigerated, 3 separate times, but consecutive. Pharmacy is not planning of starting off as a Cat 3 compounder.*	Yes
INITIAL MEDIA FILL & ASEPTIC TECHNIQUE ASSESSMENT: Before beginning to compound independently or have direct oversight of compounding personnel, personnel who compound or have direct oversight of compounding successfully complete an initial aseptic manipulation competency evaluation which consists of a visual observation, media-fill testing followed by a gloved fingertip and thumb sampling on both hands, and surface sampling of the direct compounding area. [USP 797 Section 2.3] *Using GM3000 kit packets from QI Medical TSB. Available for vial formulation. completed for AM and SM. Initial media fill completed for 70 vials simulating vials needed for Method Suitability, however does not simulate bags(ex Sodium Bicarbonate 8.4%), only vials (Glutathione 100mg/ml 10ml vials).* *Furthermore, more than one sterilizing filter Pal supor 0.22 microns was used as each is stated to have a volume capacity of 200ml, whereas 700ml were intended to be filtered into 10ml vials.* *According to USP <797>, 2023 version, "The filter dimensions and the CSP to be sterilized by filtration should permit the sterilization process to be completed without the need for replacement of the filter during the process."* *Media fill does not demonstrate 4 filters used.*	No
GFT & MEDIA FILL INCUBATION: Documentation includes the name of the person evaluated, evaluation date and time, media and components used to include their manufacturer or supplier, expiration dates and lot numbers, starting temperature for each interval of incubation; dates of incubation, the results, and the names or other identification of the observer and the person who reads end documents the results. [USP 797 Section 2.3] *Per Tacy 797 tools each interval of incubation is documented*	Yes
ONGOING CATEGORY 1 AND 2- GFT & GARBING ASSESSMENT: After initial garbing competency evaluations, compounding personnel complete garbing competency evaluation and GFT every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete garbing competency and GFT every 12 months. GFTs are appropriately incubated. [USP 797 Section 2.2] *New Business-Has not hit 6 months as Cat 2 compounder-Initial testing was 12-19-24*	N/A
ONGOING CATEGORY 1 AND 2- MEDIA FILL & ASSESSMENT: After initial aseptic manipulations competency evaluations, compounding personnel complete aseptic technique competency, media fill, GFTs, and surface sampling of DCA every 6 months for Category 1 and Category 2 CSP's. Direct oversight personnel who do not compound complete media fill every 12 months. GFTs and surface samples are appropriately incubated. [USP 797 Section 2.3] *New Business-Has not hit 6 months as Cat 2 compounder-Initial testing was 12-19-24*	N/A

ONGOING KNOWLEDGE & COMPENTENCY OF CORE SKILLS: Training and knowledge assessment of sterile compounding principles or core skills is completed at least every 12 months. [USP 797 Section 2.1] *New Business Critical Point and Observational forms*	N/A
FAILED COMPETENCY INVESTIGATION: Initial and ongoing competency assessment failures are investigated, remediated, and documented in a Corrective Action Plan. [USP 797 Sections 2.2 & 2.3]	N/A
STAFF TRAINING IN VIABLE AIR AND SURFACE SAMPLING: Personnel are trained and competent in air and surface sampling procedures to ensure accurate and reproducible sampling. [USP 797 Section 6.1] *Initially taught by Critical Point and consultant, and there is a competency assessment for training of VAS and SS*	Yes
CLEANING PERSONNEL: Cleaning and disinfecting activities are performed by trained and appropriately garbed personnel using facility-approved agents and procedures. Cleaning personnel demonstrate knowledge and competency of core skills related to cleaning, disinfection, and maintenance of environmental conditions initially and at least once every 12 months. [USP 797 Sections 7 & 2.1] *Nov and Dec 2024*	Yes

FACILITY COMPOUNDS CATEGORY 3

ONGOING CATEGORY 3 GFT & GARBING ASSESSMENT: After initial garbing competency evaluations, compounding personnel complete garbing competency and GFT every 3 months for Category 3 CSP's. Direct oversight personnel who do not compound complete garbing competency and GFT every 12 months. GFTs are appropriately incubated. [USP 797 Section 2.2]	
ONGOING CATEGORY 3 ASEPTIC PROCESSING COMPETENCY: Aseptic competency is repeated at least one time every 3 months for personnel compounding Category 3 CSPs. The simulation must capture elements that could potentially affect the sterility of the CSP. Immediately following the media-fill test, gloved fingertip and thumb sampling is performed on both hands and surface sampling of the direct compounding area. Direct oversight personnel who do not compound must complete media fill every 12 months. [USP 797 Section 2.3]	

N. MICROBIOLOGICAL AIR AND SURFACE MONITORING: ALL CATEGORIES

ENVIRONMENTAL MONITORING PROGRAM & SOPs: The microbiological air and surface monitoring program is clearly described in the facility's SOPs, which includes a diagram of the sampling locations, procedures for collecting samples, frequency of sampling, size of samples (e.g., surface area, volume of air), time of day of sampling in relation to activities in the compounding area, and action levels that trigger corrective action. [USP 797 Section 6] *SOP 2.3 "Viable Air Sampling' and SOP 2.31 'Operation and Maintenance of MicroBio MB1 Bioaerosol Sampler'*	Yes
VIABLE AIR SAMPLING: Volumetric active air sampling using an impaction air sampler collecting at least 1000L of air is conducted in each classified area [e.g., ISO Class 5 PEC and ISO Class 7 and 8 room(s)] during dynamic operating conditions and is completed at least every 6 months. [USP 797 Section 6.2] *Dates of collection: Feb 21, 2025*	Yes
AIR IMPACTION DEVICE: Device is serviced and calibrated according to the manufacturer's recommendations. [USP 797 Section 6.1] *In-house Viable air sampling device Qualisair MicroBio SN 30152581591 last calibrated Oct 28, 2024*	Yes
SURFACE SAMPLING: Microbiological surface sampling is conducted in all classified areas and pass-through chambers under dynamic operating conditions and performed at least once monthly. [USP 797 Section 6.3] *New Business-so far SS date 2-20-25-see map posted*	Yes
GROWTH MEDIA: A general microbiological growth media that supports the growth of bacteria and fungi is used and a COA from the manufacturer is available. Growth media used for surface sampling contains neutralizing agents (e.g., lecithin and polysorbate 80). [USP 797 Sections 6.2 & 6.3] *Hardy TSA with L&T plates P34*	Yes
MEDIA INCUBATION: Samples are incubated at 30°C - 35°C for 48 hours and 20°C - 25°C for an additional 5 days; if dual growth media are used, incubate one media device at 30°C - 35°C for 48 hours and the second media device at 20°C - 25°C for 5 days. The incubator temperature is monitored during incubation, either manually or by a continuous recording device, and results are reviewed and documented as described in the facility's SOPs. Incubators are placed in a location outside of the sterile compounding area. [USP Sections 6.2.2 (Box 5) & 6.3.2 (Box 6)] *Per SOP 4.4 'Glove Fingertip Sampling' Section 6.4.4. Pharmacy has 3 incubators*	Yes
ENVIRONMENTAL MONITORING TREND ANALYSIS: Regular review of sampling data is performed to detect trends and review of trending data is documented. [USP 797 Section 6.1] *New business*	N/A
CORRECTIVE ACTION: When microbial growth exceeds action levels, the cause is investigated, and corrective action is taken; corrective actions taken are reviewed for effectiveness. An attempt to identify microorganisms at the genus level is made. [USP Sections 6.2.3 & USP 6.3.3]	N/A

FACILITY COMPOUNDS CATEGORY 3

CATEGORY 3-VIABLE AIR SAMPLING: Volumetric air sampling is completed within 30 days prior to the commencement of any Category 3 compounding and at least monthly thereafter regardless of the frequency of compounding Category 3 CSPs.Air sampling sites are selected in all classified areas. [USP 797 6.2.1]	
CATEGORY 3-SURFACE SAMPLING: Surface sampling for any Category 3 CSPs, is completed in all classified areas, and pass-through chambers connecting to classified areas, prior to assigning a BUD longer than BUD limits for Category 2 CSPs (defined in Table 13 of USP 797) and at least weekly on a regularly scheduled basis regardless of the frequency of compounding Category 3 CSPs. [USP 797 6.2.2]	
CATEGORY 3-BATCH SURFACE SAMPLING: Surface sampling is conducted within the PEC used to prepare Category 3 CSPs, at the end of each batch before cleaning and disinfection occurs, unless a self-enclosed robotic device is used. When a self-enclosed robotic device is used as the PEC, surface sampling is conducted at least once daily at the end of compounding operations before cleaning and disinfection occurs. [USP 797 Section 6.3.2]	

O. CLEANING AND DISINFECTING: ALL CATEGORIES

CLEANING SOPS: The frequency, method(s), documentation requirements, and location(s) of cleaning, disinfecting, and applying sporicidal disinfectants are described in written SOPs; use of agents is in accordance with manufacturer's instructions, procedures, and in adherence with minimum wet contact times. SOPs describe the time period during which, once opened, sterile cleaning and disinfecting agents, supplies, and sterile 70% IPA may be reused. Sterile water is used to dilute concentrated cleaning agents used inside of PECs (if applicable). Cleaning and disinfecting agents are EPA-registered. If a one-step disinfectant cleaner is not used, surfaces are cleaned prior to being disinfected. [USP 797 Section 7] *Policy SOP 3.5 'Sanitization of Sterile Compounding Environments'*	Yes
DAILY PEC CLEANING & DISINFECTION WITH STERILE AGENTS: Equipment and all interior surfaces of the PEC are cleaned and disinfected daily on days when compounding occurs and when surface contamination is known or suspected. Sterile 70% IPA is applied after cleaning, disinfecting, or after one-step disinfectant cleaner or sporicidal agent application to remove residue. [USP 797 Section 7] *As documented in Tacy 797 tool-using sterile Peridox (dwell time of 3 mins) and Sterile SIPA*	Yes
CATEGORY 1 AND 2-MONTHLY PEC SPORICIDAL DISINFECTION: Equipment and all interior surfaces of the PEC, including underneath of removable work trays, are cleaned with a sporicidal agent monthly. [USP 797 Section 7] *Documented in Tacy's 797 tool as completed on 2/13/25*	Yes

DAILY SEC & SCA CLEANING & DISINFECTION: Work surfaces, floors, sink surfaces, and pass-through chambers are cleaned and disinfected daily on days when compounding occurs. [USP 797 Section 7]	Yes
CATEGORY 1 AND 2 -MONTHLY PEC, SEC & SCA SPORICIDAL DISINFECTION: Equipment and all interior surfaces of the PEC, including underneath of removable work trays, work surfaces, pass-through chambers, storage shelving and bins, equipment outside of PEC's, sink surfaces, floors, ceilings*, walls, doors, and doors frames at least once monthly. SCA ceilings (if applicable) are only cleaned, disinfected, and have sporicidal agents applied when visibly soiled and when surface contamination is known or suspected. [USP 797 Section 7] *Documented in Tacy's 797 tool as completed on 2/13/25. Task states cleaned under work surface of BSC.*	Yes
PEC SANITIZATION WITH STERILE 70% IPA: Sterile 70% IPA is applied to the horizontal work surface, including removable trays, immediately before initiating compounding and at least every 30 minutes. If a compounding process takes more than 30 minutes, the work surface is disinfected immediately after the end of the compounding process. Sterile 70% IPA is allowed to dry. [USP 797 Section 7]	Yes
CLEANING SUPPLIES & TOOLS: All cleaning and disinfecting supplies (e.g., wipers, sponges, pads, and mop heads), except for tool handles and holders, are low lint. Supplies used inside PECs are sterile. [USP 797 Section 7.1.2] *Noted sterile dedicated lint free wipes inside each hood*	Yes
REUSABLE CLEANING TOOLS: Reusable cleaning tools (e.g., mop frames) are made of cleanable materials and are cleaned and disinfected before and after each use. Reusable tools are dedicated for use in the classified areas or SCA and are not removed. Mops used in HD compounding areas, are dedicated for use only in thosa areas. [USP 797 Section 7.1.2] *Separate mops for the different suites*	Yes

FACILITY COMPOUNDS CATEGORY 3

WEEKLY SPORICIDAL CLEANING OF PECs & SECs: Weekly cleaning using a sporicidal agent is performed on all internal surfaces of PEC and equipment in PEC's, on work surfaces outside the PEC, pass-through chambers, and floors. [USP 797 Section 7]	
MONTHLY SEC SPORICIDAL DISINFECTION: A sporicidal disinfectant is applied to storage shelving and bins, equipment outside of PEC's, sink surfaces, ceilings, walls, doors, and doors frames at least once monthly. [USP 797 Section 7]	

P. COMPOUNDING CSPs FROM NONSTERILE COMPONENTS OR SUPPLIES – CATEGORY 2 & 3

PRESTERILIZATION ACTIVITY CONTAINMENT ENCLOSURES: Pre-sterilization procedures, such as weighing and mixing of nonsterile components, occur in ISO Class 8 or better environment (e.g., anteroom or buffer room) and are performed in single-use containment glove bags, CVEs, BSCs, or CACIs. [USP 797 Section 4.2.6] *SOP 6.4 'Compounding non-sterile to sterile' CVE 's are located in ISO 8 rooms*	Yes
LOCATION OF STERILE & NONSTERILE PECs: PECs used for sterile and nonsterile compounding (e.g., pre-sterilization procedures) are placed in separate rooms unless the buffer room can maintain an ISO Class 7 classification during particulate generating activities. Co-located PECs are at least 1 meter apart and particle-generating activities are not performed during sterile compounding processes [USP 797 Section 4.2.1; USP 800 Section 5.3] *Separate CVE's. PEC's are only for compounding Sterile preparation.*	Yes
COMPONENT SOPs: Written SOPs address the selection, receipt, evaluation, handling, storage, and documentation of all CSP components including ingredients and container closures. [USP 797 Section 9.3] *SOP 6.4 Section 4.1 "Preparing Sterile from Non-sterile Components'. Pharmacy has bar code scanning and entry into SI Compounding software.*	Yes
COMPONENT QUALITY & COA: APIs and components comply with the criteria in the USP-NF (if one exists for inactive components) and have a COA including specifications and test results showing the API or component meets expected quality. APIs and other components labeled "not for pharmaceutical use", "not for injectable use", "not for human use", or equivalent are not used in CSPs. [USP 7 Section 9.3.1] *Has not ordered injectable medication API to be compounded until permitted*	N/A
API MANUFACTURERS: APIs are manufactured by an FDA-registered facility in the U.S. or comply with the laws and regulations of the applicable regulatory jurisdictions outside of the U.S. [USP 797 Section 9.3.1]	N/A
COMPONENT STORAGE: Components are handled and stored in a manner that prevents contamination, mix-ups, and deterioration and under temperature, humidity, and lighting conditions consistent with those indicated in official monographs or specified by the suppliers and/or manufacturers. [USP 797 Section 9.3.4] *No injectable components ordered yet*	N/A
STERILE, DEPYROGENATED SUPPLIES: Supplies in direct contact with CSPs are sterile and depyrogenated. A COA or similar conformance documentation is reviewed. [USP 797 Section 9.3.1] *Beakers, tweezers, cylinders, scissors noted wrapped in Aluminum foil*	Yes
COMPONENT RECEIPT: Upon receipt, the external packaging of components is examined and components of unacceptable quality or showing deterioration are promptly labeled as rejected and segregated from active stock. APIs and components are inspected for a visible manufacturer expiration date. Components lacking expiration dates are assigned an expiration date no more than 1 year after receipt and both the date of receipt and facility assigned expiration date is clearly marked on the component packaging. [USP 797 Section 9.3.2] *Process is to write in sharpie the date opened on the jar and place a bar code on lid*	N/A
STERILIZATION OF INJECTABLES WITHIN 6 HOURS OF COMPLETION: Injectable CSPs containing nonsterile components or that come into contact with nonsterile devices (e.g., containers, tubing) during compounding are sterilized within 6 hours of completion. [USP 797 Section 10] *See sterilization time on CR under Compounding Controls*	N/A

Q. STERILIZATION OF CSPs - CATEGORY 2 & 3

STERILIZING FILTERS: Sterilizing filters used are sterile, depyrogenated, have a nominal pore size of 0.22 µm or smaller, and are appropriate for pharmaceutical use. Sterilizing filters are certified by the manufacturer to retain at least 10,000,000 microorganisms of a strain of Brevundimonas diminuta per square centimeter of upstream filter surface area. Filters are chemically and physically compatible with all ingredients in the CSP (e.g., water-miscible alcohols may damage filter integrity); chemically stable at the pressure and temperature conditions that will be used; and have enough capacity to filter the required volumes. [USP 797 Section 10.2] *Pall Supor filter HP1002 25mm Syringe Filter used for demonstrating media fill of 700ml only has a capacity of 200ml, so multiple filters were used. Inadequate capacity of filter to filter required volume.* *This filter when used for Media fill, package insert states Max Operating pressure is 75 psi, however, expected bubble point noted on Media fill record is noted to be 46 with measured outcome of 52 psi bubble point* *This pharmacy will be sterilizing by filtration per SOP 6.11 'Sterility'* *Plan is to use MDI Asepti-Cap KS PES Capsule filter (capable of 1 liter) for aqueous solutions and AseptiVent TF PTFE Capsule filter.-See COA Pall Supor filter used for demonstrating media fill of 700ml only hes a capacity of 200ml, so multiple filters were used. Inadequate capacity of filter to filter required volume.* *Since multiple filters were used, where is it documented that each filter passed the bubble point?* *Per 2023, USP <797>, "The filter dimensions and the CSP to be sterilized by filtration should permit the sterilization process to be completed without the need for replacement of the filter during the process. Filter units used to sterilize CSPs must be subjected to the manufacturers' recommended integrity testing, such as a post-use bubble point test. If multiple filters are required for the compounding process, each of the filters must pass a filter-integrity test."*	No

BUBBLE POINT TESTING: Sterilizing filters are subjected to the manufacturers' recommended integrity testing, such as a post-use bubble point test. If multiple filters are required for the compounding process, each of the filters passes a filter-integrity test. [USP 797 Section 10.2] For failed BP testing, CSP is discarded or, after investigating, refiltered not more than one time. [USP 797 Section 10.2] *Pharmacy used 4 filters to filter 700ml of media fill, however bubble point is not documented for each filter.*	No
CSP PREFILTRATION: When CSPs are known to contain excessive particulate matter, prefiltration is performed using a filter of larger nominal pore size (e.g., 1.2 µm) or a separate filter of larger nominal pore size placed upstream of (i.e., prior to) the sterilizing filter. [USP 797 Section 10.2] *No plans on prefiltration at this time.*	N/A
CSP TERMINAL STERILIZATION SOP includes: 1) A description of CSP terminal sterilization process(es), including the temperature, pressure (if applicable), duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization methods and equipment. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *Pharmacy will not be terminally sterilizing*	N/A
STEAM OR DRY HEAT STERILIZATION CYCLES FOR CSPs: Sterilization cycles allow for an exposure duration that includes sufficient time for the entire contents of the CSP to reach and remain at the sterilizing temperature during the duration of the sterilization period. CSPs sterilized vial steam are placed in the autoclave to allow steam to reach CSPs without entrapment of air. CSPs sterilized via dry heat are placed with sufficient space between materials to allow for hot air circulation. Sterilization cycle parameters (e.g., temperature, pressure, and duration) and load configuration(s) are documented. [USP 797 Section 10.3 & 10.4] *No terminal sterilization of CSP plan.*	N/A
BIOLOGICAL INDICATOR USE: The effectiveness of steam or dry heat sterilization of CSPs is verified and documented for each sterilization run or load by using appropriate biological indicators (e.g., Geobacillus stearothermophilus for steam, Bacillus atrophaeus for dry heat) and other confirmation methods. [USP 797 Section 10.3] *Pharmacy had autoclaved the head of the viable air sampler and plans on autoclaving goggles. BI used is Letco's Verify SCBI.* *Other items to be sterilized: Rubber stoppers, utensils (Scissors, tweezers)* *See Autoclave run log Cycle # A021325@1*	Yes
STEAM & DRY HEAT CSP PREFILTRATION: Immediately before filling containers that will be sterilized via steam, or dry heat, CSP solutions are passed through a filter with a nominal pore size of not larger than 1.2 µm for removal of particulate matter. [USP 797 Section 10.3]	N/A
CALIBRATED DATA RECORDER: A calibrated data recorder or chart is used to monitor each steam or dry heat sterilization cycle and to examine for cycle irregularities (e.g., deviations in temperature or pressure). The calibrated oven is equipped with temperature controls and a timer. [USP 797 Section 10.3 & 10.4] *It cannot be demonstrated from the review of the autoclave run that the duration of the exposure period includes sufficient time for the entire contents of the items to reach the sterilizing temperature.* *Cycle PKG has incorrect units of 255degrees C.* *The date and time of the cycle initiation of the run with the BI is indicated on the run of autoclaved items-ex Air sampler head or utensils, but the log does not indicate the end time to demonstrate that temp of 121C was met for the full 30 minutes as per SOP 3.4 'Autoclave Steam Sterilization'*	No

R. STERILIZATION & DEPYROGENATION OF SUPPLIES & CONTAINER CLOSURE SYSTEMS - CATEGORY 2 & 3

STERILIZATION & DEPYROGENATION SOP's include: 1) A description of sterilization and depyrogenation process(es) used to sterilize and/or depyrogenated compounding supplies and container closure systems, including the temperature, duration, permissible load conditions for each cycle, and the use of biological indicators and endotoxin challenge vials (ECVs). 2) Personnel training and competency assessment on sterilization and depyrogenation methods and equipment used by the facility. 3) Schedule and method for establishing and verifying the effectiveness of methods selected. [USP 797 Section 10] *SOP 6.6 'Dry Heat Depyrogenation'* *Pharmacy outsourced the cycle load for depyrogenation to External lab Pharmetric. The depiction of the load is pending from the firm. Inspector clarified largest beaker size was 1 liter.* *See training log in each binder for Pre-Cycle Preparation and Dry Heat Oven Setup and Operation* *Handling and Storage of Depyrogenated items*	Yes
DEPYROGENATION VIA DRY HEAT: Dry heat depyrogenation is used to render glassware, metal, and other thermostable containers and components pyrogen free. The exposure period includes sufficient time for items to reach the depyrogenation temperature; items remain at the depyrogenation temperature for the duration of the depyrogenation period. [USP 797 Section 10.1 & USP 1228.4] *As per 'Dry Heat Oven Monitoring log'* *During walk through observed covered beakers with the run#*	Yes
DEPYROGENERATION VIA RINSING: Non-thermostable items are sterilized via a validated sterilization method and cycle: these items are also depyrogenated by multiple rinses with sterile, nonpyrogenic water (e.g., Sterile Water for Injection or Sterile Water for Irrigation) and then thoroughly drained or dried immediately before use in compounding. [USP 797 Section 10 & 10.1] *Pharmacy currently does not have any non-thermostable items*	N/A
DEPYROGENATION PROCESS VALIDATION: The effectiveness of the dry heat depyrogenation cycle(s) is established initially and verified annually using Endotoxin Challenge Vials (ECVs) to demonstrate the cycle achieves a greater than or equal to 3-log endotoxin reduction. The effectiveness of the depyrogenation cycle is re-established if there are changes to the cycle parameters . Cycle verifications are documented. [USP 797 Section 10.1] *Dry Heat Oven Depryogenation Validation Report from Pharmetric using Endosafe PTS Cartridges demonstrated a 5.3 log reduction in endotoxins per 3-3-25 report*	Yes
STERILIZATION CYCLE VALIDATION: When performed onsite, the efficacy of sterilization cycles used for supplies or container closure systems are established and documented. Each sterilization run or load is verified and documented by using appropriate biological indicators (e.g., spores of Geobacillus stearothermophilus) and other confirmation methods. [USP 797 Section 9.3.1 & USP 1229] *Autoclave SN 215754 validated with 11 Attest BI's and a positive control by Pharmetric 3-3-25* *Dry Heat Oven Depryogenation Validation Report from Pharmetric using Endosafe PTS Cartridges demonstrated a 5.3 log reduction in endotoxins per 3-3-25 report*	Yes

S. MASTER FORMULATION AND COMPOUNDING RECORDS – ALL CATEGORIES

MASTER FORMULATION RECORD (MFR): A MFR is created for all CSPs prepared from nonsterile ingredient(s) or CSPs prepared for more then one patient and any changes or alterations to an MFR are approved and documented per facility's SOPs. [USP 797 Section 11.1] *Sample MFR's reviewed for Glutathione 100mg/ml 10ml vials and Sodium Bicarbonate 8.4% bags*	Yes
MFR DOCUMENTATION: An MFR includes at least the following: 1) Name, strength or activity, and dosage form of the CSP; 2) Identities, amounts of all ingredients, and, if applicable, relevant characteristics of components; 3) Type and size of container closure system(s); 4) Complete instructions for preparing the CSP including equipment, supplies, a description of the compounding steps, and any special precautions; 5) Physical description of the of the final CSP; 6) BUD and storage requirements; 6) Stability reference; 7) Quality control procedures; 8) other information as needed to describe the compounding process and ensure repeatability. [USP 797 Section 11.1 (Box 9)] *Documentation reviewed form MFR in Si Compounding, specifically Formula #68 v.2 does not specify the size of the Depyrogenated beaker.* *No actual stability reference on Glutathione 100mg/ml IM Inj -it refers to Medisca Formula No F 003 861V4-per SOP 3.1 'Formulation Master Record' 3.3.4 requires compatibility and references.*	No

COMPOUNDING RECORD (CR): A CR is created for all Category 1, Category 2, and Category 3 CSPs. A CR is created for immediate-use CSPs prepared for more than one patient. A CR includes at least the following: 1) Name, strength or activity, and dosage form of the CSP; 2) Date and time of preparation of the CSP; 3) Assigned internal identification number (e.g., prescription, order, or lot number); 4) A method to identify the individuals involved in the compounding process and individuals verifying the final CSP; 5) Name of each component; 6) Vendor, lot number, and expiration date for each component for CSPs prepared for more than one patient and for CSPs prepared from nonsterile ingredient(s); 7) Weight or volume of each component; 8) Strength or activity of each component; 9) Total quantity compounded; 10) Final yield; 11) Assigned BUD and storage requirements; 12) Results of QC procedures. And, if applicable, 13) MFR reference for the CSP; and 14) Calculations made to determine and verify quantities and/or concentrations of components. [USP 797 Section 11.2] *No sample CR at this time. Pharmacy has not compounded for release or testing.*	No
STERILIZATION CYCLE DOCUMENTATION: The date, run, and load numbers of the steam or dry heat sterilizer used to sterilize a CSP are documented on the CR if applicable. [USP 797 Sections 10.3 & 10.4] *Unable to determine as there is no sample CR*	No

T. RELEASE INSPECTION AND TESTING – ALL CATEGORIES

RELEASE TESTING PROCEDURES: All release testing procedures (e.g., visual inspections and testing) are included in facility documentation such as MFRs and SOPs. [USP 797 Section 12] *SOP 3.1 'Formulation Record (Master Formula), SOP 6.5 'Visual Inspection"*	Yes
VISUAL INSPECTION: CSPs are visually inspected before release and dispensing to determine whether the 1) physical appearance of the CSP is as expected (e.g., free of inappropriate visible particulates or other foreign matter, discoloration, or other defects), 2) container closure integrity is intact (e.g., checking for leakage, cracks in the container, or improper seals), 3) CSP and its labeling match the prescription or medication order. [USP 797 Section 12.1] *Pharmacy has not compounded for testing or release. SOP 6.5 'Visual Inspection' -covered under Quality Verificetion on MFR*	Yes
DELAYED DISPENSING VISUAL INSPECTION: When CSPs are not released or dispensed on the day of preparation, a visual inspection is conducted immediately before its release to ensure the CSP is free from any defects such as precipitation, cloudiness, or leakage, which could develop during storage. [USP 797 Section 12.1] *No indication that this is a requirement prior to release after quarantine from Formula #68 v.2 under 'Verification list' of the record for Glutethione inj. Nothing has been released. This question is really an N/A*	No
CSP REJECTION & QUARANTINE: CSPs found to be of unacceptable quality (e.g., observed defects) are promptly rejected, clearly labeled as rejected, and segregated from active stock. [USP 797 Section 12.1] *N/A Nothing released*	Yes
INVESTIGATION OF OOS RESULTS: Out-of-specifications results and defects indicating sterility or stability problems are investigated to determine the root cause and a corrective action plan is implemented and documented per facility SOPs. [USP 797 Section 12 & 12.1] *This is an N/A nothing tested or released.*	Yes

U. CSP HANDLING, STORAGE, PACKAGING, SHIPPING, & TRANSPORT – ALL CATEGORIES

STORAGE AREA TEMPERATURE MONITORING: Temperature in CSP & component storage areas is monitored at least once daily and recorded on a log on days when the facility is open or by a continuous temperature recording device; temperature data is readily retrievable. Monitoring equipment is calibrated or verified for accuracy as recommended by the manufacturer or every 12 months. When CSPs have been exposed to temperature excursions above or below storage temperature limits for the CSP, a Designated Person determines whether the CSP has retained its integrity or quality. [USP 797 Sections 9.3 & 19.1]	Yes
CSP PACKAGING: CSP packaging and shipping materials are selected to protect CSPs from damage, leakage, contamination, degradation, adsorption and prevent inadvertent exposure to transport personnel. [USP 797 Section 19.2] *Has not selected shipping materials yet. Plans on using U-line double insulated containers.*	N/A
SHIPPING & TRANSPORTING: Modes of transport are selected that are expected to deliver properly packaged CSPs in an undamaged, sterile, and stable condition. Special handing instructions are provided and/or affixed to the exterior of the container when applicable. [USP 797 Section 19.2] *Will plan on using UPS*	N/A

V. STERILE QUALITY PROGRAM, SOP's & DOCUMENTATION- ALL CATEGORIES

QA/QC PROGRAM & SOPs: A Quality Assurance (QA) and Quality Control (QC) program is documented in facility SOPs and formally establishes a system of 1) adherence to procedures, 2) prevention and detection of errors and other quality problems, 3) evaluation of complaints and adverse events, and 4) appropriate investigations and corrective actions. The QA/QC SOPs describe the roles, duties, and training of personnel responsible for each aspect of the QA program. [USP 797 Section 18] *SOP 8.1 'Continuous Quality Improvement'* *See Attachment 1 for QRE data*	Yes
INVESTIGATIONS & CAPAs: A designated person(s) follows up to ensure investigations are conducted and corrective actions are taken if problems, deviations, failures, or errors are identified or when complaints or adverse reactions are reported. A complete record of each reported complaint and adverse reaction is created and retained. Investigations and corrective actions are documented. [USP 797 Sections 17, 18.2, & 18.3] *SOP 8.2 'Responding to OOS tests'*	Yes
ADR & COMPLAINT DOCUMENTATION: A complete record of each reported complaint and adverse reaction is created and retained per USP 797. [USP 797 Section 18.1] *SOP 8.1 CQI*	Yes
RECALL PROCEDURES & SOP: If CSPs are dispensed or administered before the results of release testing are known, procedures are in place to immediately notify the prescriber of a failure of specifications with a potential to cause patients harm; determine the severity of the problem and urgency for implementation/completion of recall; identify patients (or other points of distribution) who have received affected CSP; recall any unused dispensed CSPs; quarantine remaining stock in the pharmacy; investigate if other lots are affected and recalled if needed; conduct investigation and document reason for the failure. Recalls are reported to the appropriate regulatory body as required by the laws and regulations of the applicable regulatory jurisdiction. [USP 797 Section 18] *SOP 8.3 'Recalls'*	Yes
ANNUAL SOP & QA/QC COMPLIANCE REVIEW: Facility sterile compounding SOPs are reviewed every 12 months by the Designated Person(s); the review is documented. Changes to SOP are made only by the Designated Person and documented. Acknowledgement of revisions to SOP's are communicated to all personnel. The overall QA/QC Program is reviewed at least once every 12 months by the Designated Person(s); the review is documented, and corrective actions are taken if needed. [USP 797 Section 17 & 18] *Each SOP is signed and Table of Contents has the date of reviewed*	Yes

W. HAZARDOUS DRUG HANDLING & COMPOUNDING – ALL CATEGORIES

DESIGNATED PERSON: The entity has a Designated Person who is qualified and trained to be responsible for implementing appropriate HD procedures, overseeing compliance with USP 800 requirements, ensuring environmental control of the storage and compounding areas, monitoring HD facility operations, testing, and acting on results. [USP 800 Section 4] *Designated Person: Andrew Mesiha- has training in Critical Point around June to Nov 2024, and Medisca LP3 class*	Yes

INV797 USP Sterile Compounding

Insp # 203292 | St. Luke Lab LLC | File # 30333

HAZARD COMMUNICATION PROGRAM (HCP): Facility has SOPs to ensure effective training regarding proper labeling, transport, storage, and disposal of HDs and use of Safety Data Sheets. The HCP and HD SOPs include a written plan describing 1) how USP 800 requirements are implemented, 2) HD chemical container labeling with the identity of the material and appropriate hazard warnings, 3) readily accessible location of HD chemical SDSs known and accessible by all personnel, 4) HD risk training and information provided to all personnel with HD exposure risk before initial HD handling work assignment and whenever hazard changes, 5) personnel of reproductive capability written acknowledgement of understanding of HD handling risks. [USP 800 Section 8] *SOP 7.0 'Hazard Communication Program' SOP 7.1 'Hazardous Drug Employee Training and Safety Program'*	Yes
LIST OF HAZARDOUS DRUGS & ASSESSMENT OF RISK: Facility maintains a list of HDs that includes any items on the current NIOSH that the entity handles. The list is reviewed every 12 months and whenever a new agent or dosage form is used. All HD drugs follow the requirements of USP 800 unless an assessment of risk (AOR) is performed. If an assessment of risk approach is taken, the entity must documents what alternative containment strategies and/or work practices are being employed for specific dosage forms to minimize occupational exposure. The AOR minimally contains the type of HD, dosage form, risk of exposure, packaging, and manipulation considerations. The HD drug list & AOR is reviewed at least every 12 months and whenever a new agent or dosage form is used. [USP 800 Section 2] *Not currently available*	No
CONTAINMENT REQUIREMENTS: All antineoplastic HDs requiring manipulation and HD active pharmaceutical ingredients (APIs) on the NIOSH list follow all the requirements of USP 800. [USP 800 Section 2, Box 1] *Not currently compounding HD's*	N/A
HD HANDLING, RECEIPT & STORAGE SOPs: SOPs are created and followed for the safe handling of HDs used by the facility. [USP 800 Section 17] *SOP 7.2 'PPE, Receiving and Transport of Bulk HD API or Medications'*	N/A
HD HANDLING AREAS, SIGNAGE, & ACCESS: Signage designating HD handling areas are prominently displayed and access to HD handling areas is restricted to authorized personnel. Designated areas are available for receipt, unpacking, storage, and sterile compounding of HDs. [USP 800 Section 5] *Signage on HD Suite*	Yes
HD STORAGE: HDs are stored to prevent spillage or breakage, off floors, and in areas appropriate for natural disasters. Antineoplastic HDs and HD API are stored separately from non-HDs to prevent contamination and personnel exposure. HD storage areas are externally ventilated and negative-pressure rooms with at least 12 ACPH. Refrigerated antineoplastic HDs are stored in a dedicated refrigerator, in a negative pressure area with at least 12 ACPH. Pass through refrigerators are not used. [USP 800 Section 5.2] *Medrep tested the ACPH of negative HD prep room to be 26.99 ACPH from Jan 8, 2025 report*	Yes
STERILE HDs COMPOUNDED IN A C-SCA: C-SCA maintains a minimum of 12 ACPH of HEPA- filtered air and has negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800, sections 5.3.2 Table 3]	N/A
C-SEC DESIGN AND ENGINEERING CONTROLS: The C-SEC has fixed walls physically separated from other preparation areas, is externally ventilated has 30 ACPH, and negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800 Section 5.3.2 Table 3] *per Jan 8, 2025 Medrep report, HD buffer room ACPH of 60.86, pressures are maintained*	Yes
C-SEC ACCESS: The Ante Room used for entry into the negative pressure buffer room has fixed walls and maintains a minimum of 30 ACPH of HEPA-filtered air, positive pressure of +0.02" w.c. to all adjacent unclassified areas, and ISO7 or better classification. Alternatively, a negative-pressure HD buffer entered exclusively through a positive pressure non-HD buffer room contains a line of demarcation (LOD) within the negative-pressure buffer room for donning/doffing HD PPE and a method a transport of HDs, HD CSPs, and HD waste into and out of the HD buffer (e:g., pass-through chamber). Pass through chambers are included in semi-annual facility certification. [USP 800 Section 5.3.2] *Aka HD gown in room documented as ISO 7 and ACPH of 57.55*	Yes
C-SEC SINK & SAFETY EQUIPMENT: A sink is available for hand washing and an eyewash station and/or other emergency safety precautions meeting applicable laws and regulations are readily available and located where operation does not interfere with ISO classifications. Sinks are located at least 1 meter from the entrance into the buffer room (or at least 1 meter from the C-PEC in a C-SCA). [USP 800 Sections 5.3 & 5.3.2] *Green eyewash station next to sink*	Yes
C-PEC LOCATION, VENTING, & OPERATION: All C-PECs used for sterile HD compounding (e.g., CACIs or BSCs), are located within a C-SEC or C-SCA, externally vented, and maintain an ISO 5 or better air quality. C-PECs operate continuously if supplying some or all the negative pressure in the C-SEC or if used for sterile compounding. During power outages, repairs, or relocation, C-PEC use is suspended immediately. Once C-PEC power is restored, all PEC surfaces are decontaminated, cleaned, and disinfected, and compounding is not resumed until the manufacturer's specified recovery time has elapsed. [USP 800 Section 5.3.2] *ESCO BSC is ventilated to the outside*	Yes
REQUIRED HD PPE: When compounding HDs, gowns, head, hair, shoe covers, and two pairs of chemotherapy gloves are donned per facility SOPs. Chemotherapy gloves are tested to ASTM standard D6978 (or its successor) and are powder free and two pair of chemotherapy gloves are donned per SOP. Gloves are inspected for physical defects. Gloves are changed when torn, punctured, or contaminated. Personnel wash hands with soap and water after removing gloves. HD gowns are disposable, resistant to permeability by HDs, close in back, are long sleeved, closed cuff, and seamless. Gowns are changed per manufacturer's permeation information; If no data is available, HD gowns are change every 2-3 hours or immediately after a spill or splash. Gowns are limited to HD handling areas and are donned over the sterile compounding garment. When compounding, a second pair of shoe covers is donned before entering the C-SEC and doffed when exiting the C-SEC. HD PPE is disposed of appropriately prior to exiting the C-SEC. Chemotherapy gloves and sleeve covers (if used during compounding) are carefully removed and discarded immediately into an appropriate waste container inside of the C-PEC or contained in a sealable bag for discarding outside of the C-PEC. Reusable PPE is decontaminated and cleaned after each use. [USP 800 Section 7] *Per Observation, cannot demonstrate proper donning of coverall as incorrect sizes acquired.* *Contec Critigear Nitrile sterile ASTM 6978 gloves*	No
EYE AND FACE PROTECTION: Appropriate eye (goggles) and face protection (face shield) are worn when there is a risk for spills or splashes or when working outside of a C-PEC. Surgical masks are not used when respiratory protection is required per SOP and/or AOR as protection from HD exposure. [USP 800 Section 7.4]	Yes
HD TRAINING & COMPETENCY ASSESSMENT: Personnel who handle HDs are trained and demonstrate competency initially before independently handling HDs, annually, and when a new HD medication, process, SOP, or equipment is introduced. Training minimally includes an overview of the entity's HD list and their risks; review of HD SOPs; proper use of PPE, equipment, and devices; prevention of HD exposures and spills; HD exposure and spill response; use of a spill kit, PPE, and NIOSH-certified respirators; and HD disposal. Based on job duties, personnel receive additional HD training in HD acquisition and receipt, preparation, compounding, dispensing, labeling, storage, and transport. Training and competency assessments are documented. [USP 800 Sections 8, 9, 11.1, 16, & 17] *Dates for SM 12/10/24 and AM 12/10/24 Competnecy assesment for HD storage handling, receiving, transporting, disposal and Assessment for HD general* *RPt must be retrained on proper use of PPE prior to initiating compounding.*	Yes
HD ATTESTATION: Personnel of reproductive capability have a written acknowledgement attesting to their understanding of HD handling risks. [USP 800 Section 8] *Signed Sept 2024*	Yes
DEDICATED HD EQUIPMENT: Disposable or cleanable equipment for compounding (e.g., mortar and pestle, graduated cylinder, spatulas) is dedicated for use with HDs. [USP 800 Section 13] *Dedicated equipment in prep-room*	Yes
NON-HD COMPOUNDING IN A C-PEC: Non-HDs compounded in a HD C-PEC are placed in protective outer wrapping, labeled for PPE handling precautions, and treated as an HD. The C-PEC worksurface is decontaminated between compounding of different HDs. [USP 800 Section 5.3.2 and Table 3]	N/A

DEACTIVATION, DECONTAMINATION, CLEANING & DISINFECTION (D/D/C/D): Areas where HDs are handled and all reusable equipment and devices are deactivated/decontaminated, and cleaned. Sterile compounding areas and devices are subsequently disinfected. Written procedures for decontamination, deactivation, cleaning, and disinfection are available and followed. Procedures include agents used, dilutions (if used), frequency, and documentation requirements. Agents selected are appropriate for the type of HD contamination(s), location, and surface materials. Sterile 70% IPA is used to remove residue left on sterile surfaces and compounding areas by decontaminating agents. [USP 800 Section 15] *SOP 7.4 'HD Spill, Deactivation and Waste Management'*	Yes
D/D/C/D TRAINING & PPE REQUIREMENTS: Personnel are trained in deactivation/decontamination, cleaning, and disinfection to protect themselves and the environment from contamination. Personnel wear appropriate PPE resistant to cleaning agents used, including 2 pairs of ASTM-tested chemotherapy gloves and impermeable disposable gowns. Eye protection and face shields are worn if splashing may occur. [USP 800 Section 15] *See 'Competency Assessment Hazardous Drug'*	Yes
C-PEC D/D/C/D: C-PEC is decontaminated at least daily (when used), after as spill, before and after certification, voluntary interruption, or if ventilation tool is removed. The C-PEC worksurface is decontaminated between compounding of different HDs. The area under the work tray of a C-PEC is deactivated, decontaminated, and cleaned at least monthly. [USP 800 Section 15.2] *Documented in 797 tool using Peridox*	Yes
HD LABELING, PACKAGING, TRANSPORT & SPILLS HANDLING: Facility follows SOP for the labeling, handling, packaging, and transport of HDs which addresses the prevention of spills/exposures, training for exposure, and spill handling. HD CSPs are identified as hazardous and labeled with special handling precautions. Labeling process for compounded HD products does not introduce contaminated materials into non-HD areas. [USP 800 Section 11 & 11.2] *No HD's compounded at this time*	N/A
SPILL KITS, & SINGAGE: Spill kits are readily available with appropriate supplies, PPE, and signs to restrict access to affected areas. restriction posted, and documentation of spills occur when needed. [USP 800 Section 16]	Yes

X. LYOPHILIZATION

Sterile preparations prepared for lyophilization are maintained in ISO 5 unidirectional laminar flow air throughout sterilization, filling, end transport to the lyophilizer. [64B16-27.797(5) F.A.C.]	
A recorded smoke study is available and demonstrates that transport from the PEC to the lyophilizer is accomplished in ISO 5 laminar flow air at all times. [64B16-27.797(5) F.A.C.]	
The pharmacy has established and follows policies and procedures for the high-level disinfection of the lyophilizer chamber, piping, and all other areas of the unit which pose a potential risk for contamination of the product. [64B16-27.797(5) F.A.C.]	
The pharmacy validated the high-level disinfection procedure initially, and after changes to the cleaning process or agents. Documentation of studies is available for inspection. [64B16-27.797(5) F.A.C.]	
Validation studies for high level disinfection are performed with the 5-aerobic bacterial and fungal ATCC organisms referenced in USP<71> are conducted by an external vendor unless the firm has an internal laboratory capable of performing the studies. An internal laboratory is separate from the compounding and work areas of the pharmacy to prevent contamination in the pharmacy. [64B16-27.797(5) F.A.C.]	
Policies and procedures are established and followed for cleaning the lyophilizer prior to disinfection and include cleaning agents and schedules. Documentation of cleaning is maintained and available for inspection. [64B16-27.797(5) F.A.C.]	
Policies and procedures are established for the maintenance of the lyophilizer and at a minimum include the manufacturers recommendations. [64B16-27.797(5) F.A.C.]	
The maintenance schedule includes provisions for periodic testing of the chamber for leaks and all other recommended procedures described by the equipment manufacturer. Documentation of routine maintenance is available for inspection. [64B16-27.797(5) F.A.C.]	
SOPs and quality assurance program established to include validation of the filling process, container closure integrity, frequent monitoring of fill volumes, identification of over fills and underfills, assessment of personnel involved in compounding for lyophilization, equipment qualification, formula verification, and evaluation of finished product for conformance to specifications. [64B16-27.797(5) F.A.C.]	
The pharmacy has provisions for sterilizing, with filters, the inert gas or air used for backfilling during the vacuum release phase. These Sterilizing filters undergo the manufacturers recommended integrity test. [64B16-27.797(5) F.A.C.]	
Media fills are conducted every six months using the maximum batch size and demonstrate the filling, transport to the lyophilizer, loading and stoppering operations. Media is NOT frozen during the media fill operation. [64B16-27.797(5) F.A.C.]	
Personnel preparing sterile compounds for lyophilization wear sterile Personal Protective Equipment that covers all exposed skin. [64B16- 27.797(5) F.A.C.]	
Glove Fingertip Sampling is performed with every batch after fill and transport into the lyophilizer on all personnel compounding for lyophilization. The results are incorporated into the batch record. [64B16-27.797(5) F.A.C.]	
In-process acceptance criteria such as color, moisture limits and visual appearance are established for each lyophilized product. [64B16- 27.797(5) F.A.C.]	
A 100% visual examination of the finished product is conducted to determine that the product conforms to the established visual criteria and is incorporated into the batch record. [64B16-27.797(5) F.A.C.]	
Finished product testing is conducted on all batches. Procedures have been established for selecting test samples from the batch and are written and followed. Such procedures may include location of vials in the lyophilizer and positions in the fill line. [64B16-27.797(5) F.A.C.]	
Finished product testing includes sterility testing using a USP<71> method unless an alternative test method has been validated and shown to be equivalent or better. Diluents used to reconstitute the sample vials for testing are preservative free. [64B16-27.797(5) F.A.C.]	
Each batch of lyophilized product with a beyond use date that falls within the USP<797> guidelines and is not tested for sterility, has viable air and surface sampling that is collected in critical areas of ISO 5 locations as well as sampling of the gloves and sleeves of personnel documented in the batch record. [64B16-27.797(5) F.A.C.]	
Every lyophilized product has established endotoxin levels Each batch of lyophilized product is tested for endotoxin in accordance with USP<85> and confirmed to fall within the set limits and documented in the batch record. [64B16-27.797(5) F.A.C.]	
Potency, radiochemical purity, or applicable test to assure label claim is conducted on every batch and documented in the batch record. In lieu of potency testing, weight-based verification may occur based on formula verification. Potency testing shall be based on the USP monograph if one is available. [64B16-27.797(5) F.A.C.]	

Y. SPECIAL PARENTERAL ENTERAL & EXTENDED SCOPE

Technicians properly identified. [64B16-27.100 (2) F.A.C.]; [64B16-27.4001 F.A.C.]; [64B16-27.410 F.A.C.]; [64B16- 27.420 F.A.C.].	
Medication is properly labeled for dispensing to patient. [64B16-28.108(2) F.A.C.]	
Outdated medications removed from active stock. [64B16-28.110 F.A.C.]; [64B16-28.1191 F.A.C.]	

INV797 USP Sterile Compounding

Insp # 203292 | **St. Luke Lab LLC** | **File # 30333**

Continuous Quality Improvement Program described in the Pharmacy policy and procedure manual and quarterly summarization of Quality Related Events are available for inspection. [64B 16 27.300 F.A.C.]; [766.101 (1) (a)(l) F.S.]	
Pharmacy maintains patient profile with allergy information and medications dispensed. [64B16-27.800, F.A.C.]	
All controlled substance prescriptions (electronic, faxed, verbal and written) contain required information. [893.04(a)(b)(c) F.S.]; [21CFR1306.05]	
Prescriptions for controlled substances are on counterfeit-proof prescription pads or blanks purchased from a department-approved vendor and the quantity and date meet the requirements of [456.42(2), F.S.].	
Controlled substance inventory taken on a biennial basis and available for inspection. [893.07(1)(a), F.S.] [21CFR1304.11] [21CFR1304.04]	
DEA 222 forms properly completed or records of CSOS orders electronically completed, linked to the original order, archived and retrievable. [893.07(2) F.S.]; 21CFR 1305.13(e)]; [21CFR1305.22(g)]	
Controlled substance records and prescription information in computer system are retrievable and maintained for 4 years. [21CFR1304.04]; [465.022(12) (a) F.S.]; [21CFR1306.22]; [64B16-28.140 F.A.C.]	
Certified daily log or signed printout maintained. [21CFR1306.22(f)(3)]; [64B16-28.140(3)(d) F.A.C]	
Pharmacy is reporting to the PDMP within 24 hours of dispensing controlled substance. [893.055(4) (3)(a), F.S.]	
Invoices for medications purchased from a Florida licensed wholesaler/distributor are retrievable for inspection. [499.005 (14) F.S.]	
A special sterile products and parenteral/enteral compounding pharmacy provides telephone accessibility to its pharmacist(s) for its patients at all hours. [64B16-28.820(3)(b)]	
A special sterile products and parenteral/enteral compounding pharmacy provides special handling and packaging of compounded parenteral and enteral preparations when delivering from the pharmacy to the patient or institution as required to maintain stability of the preparations. [64B16-28.820(3)(b)]	

Z. Miscellaneous

BLOOD-DERIVED OR BIOLOGICAL MATERIAL MANIPULATIONS: Compounding activities that require the manipulation of a patient's blood-derived or other biological material (e.g., autologous serum), are clearly separated from other compounding activities and equipment used in CSP preparation activities and controlled by specific SOPs to avoid cross-contamination. [USP 797 Section 1.1.2]	
ALLERGENIC EXTRACTS: Licensed allergenic extracts are mixed and diluted to prepare prescription sets for administration to patients. A prescriptions set is a vial or set or vials of premixed licensed allergenic extracts for subcutaneous immunotherapy that have been diluted with an appropriate diluent for an individual patient. Compounding allergenic extracts 1) minimally complies with all aspects of USP <797> Section 21; 2) involves transfer via sterile needles and syringes of conventionally manufactured sterile allergen products and appropriate conventionally manufactured sterile added substances; and 3) manipulations are limited to penetrating stoppers on vials with sterile needles and syringes and transferring sterile liquids in sterile syringes to sterile vials. If these conditions are not met, compounding of allergenic extracts follows all aspects of USP <797>. [USP 797 Sections 1.1.2 and 21]	

Remarks:

Pharmacy will do mostly non-hazardous and hazardous sterile compounding-classifies as Category 2 compounder initially. No plans on terminal sterilization at this time. Please initiate all required testing prior to release of CSP's

I have read and have had this inspection report and the laws and regulations concerned herein explained, and do affirm that the information given herein is true and correct to the best of my knowledge.

RE: License Certification for Andrew Emil Makram Hanna Mesiha

To Whom It May Concern:

This is to certify the following information, maintained in the records of the Department of Health:

PROFESSION:	Pharmacist
LICENSE NUMBER:	PS59672
ORIGINAL CERTIFICATION:	08/07/2019
EXPIRATION DATE:	09/30/2027
CURRENT STATUS OF LICENSE:	Clear, Active
AGENCY ACTION:	No
LICENSE GRANTED BY:	N/A
OTHER CERTIFICATIONS:	Certified To Administer Immunizations

To expedite the verification process, the above format is the standard format for all license certifications. If you have questions regarding the status of this license, please call the Customer Contact Center at (850) 488-0595, option 5.

Sincerely,

Michelle Burns

Inspector Notes: This pharmacy opened 3/6/2025 and is owned by the PIC and 3 other pharmacists. There is a co-owned retail pharmacy next door. Pharmacy is not applying for a license in Massachusetts at this time. Pharmacy does not have a license in any other state or Puerto Rico. Pharmacy does not stock ReliOn insulin. Pharmacy does not compound biologicals. The pharmacy does not use any platforms that are a marketplace for pharmacies to buy, sell, and bid on overstock and short date prescription drugs. The pharmacy does compound tirzepatide using the base. COA, MFR, CR for tirzepatide are Doc03_PI and Photo01_PI - Photo03 are of API.

Documents collected as part of the inspection.
To obtain a copy of these documents please contact the facility directly. They are not included in the final report.

Document Name	Description
Doc01_HD1.01	Hazardous drug active pharmaceutical ingredients.
Doc02_PI	The documents include COA examples for manufacturers.
Doc03_PI	The documents include COA, MFR and CR for tirzepatide base used for CSP.
Photo01_PI; Photo02_PI; Photo03_PI	Photographs of tirzepatide base API.
N/A	N/A

Definitions: DISPENSE means to provide a prescription drug or compounded preparation pursuant to a patient-specific prescription. DISTRIBUTE means to provide a prescription drug or compounded preparation to a prescriber, another pharmacy, or health care entity for office use or stock and is NOT patient-specific, is not labeled with the patient name at the pharmacy.

States to which the pharmacy mails/delivers prescription drugs and volume dispensed, and volume distributed per day (or week or month):
Note: if not available, request information be sent to VPP and note that information was requested in grid.

Definitions: DISPENSE means to provide a prescription drug or compounded preparation pursuant to a patient-specific prescription. DISTRIBUTE means to provide a prescription drug or compounded preparation to a prescriber, another pharmacy, or health care entity for office use or stock and is NOT patient-specific, is not labeled with the patient name at the pharmacy.

States to which the pharmacy mails/delivers prescription drugs and volume dispensed, and volume distributed per day (or week or month):
Note: if not available, request information be sent to VPP and note that information was requested in grid.

Verified Pharmacy Program® Inspection Form

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.
An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
General Pharmacy			
1.00	Is the PIC (or pharmacy manager/director) present for the inspection? *If no, list the pharmacist on duty.*	Yes	
2.00	Is the PIC employed full-time at the pharmacy? *List the number of hours worked per week onsite.*	Yes	40
3.00	Are there any other businesses located at this address? *If yes, note type of business and name.*	No	
4.00	Does the pharmacy have any other websites? *Provide list of other names/URLs.*	No	
4.01	Does the pharmacy hold .pharmacy verification?	No	
5.00	Do any other websites link to the pharmacy website (such as a provider, or other affiliate)? *If yes, list.*	N/A	
6.00	Does the pharmacy allow patients to securely enter/update profile and medical information through the website (such as through a secure patient portal)?	No	
7.00	Are patients able to order or refill prescriptions through the website? *If yes, describe.*	N/A	
8.00	Are photographs allowed during the inspection (**no PHI**)?	Yes	
9.00	List of additional personnel **interviewed as part of the inspection, including name and title:**	[redacted]	Sahar Mikhail, Compounding Technician and Silvana Awadalla, Pharmacy Intern

		Observation	Notes
Types of Practice Additional Questions If any part of a question is no, enter "No" and explain the observation.			
10.00	If the pharmacy mails or delivers filled prescriptions (patient specific, labeled with patient name when it leaves the pharmacy), are any of the deliveries to a provider or facility for administration to the patient? *If yes, indicate volume or percentage of deliveries going to a provider or facility in this state, and volume or percentage of deliveries going to a provider or facility in other states.*	No	
11.00	Does the pharmacy provide prescription products to a provider or facility for "office use" (not pursuant to a prescription received prior to delivery, not patient specific, not labeled with the patient name)? *If yes, indicate volume or percentage provided to a provider or facility within this state, end volume or percentage provided to a provider or facility in other states.*	No	
12.00	Does the pharmacy provide prescription products to providers or facilities (including other pharmacies) as a wholesale distributer (sold to the provider or facility for their use, administration, or providing/dispensing to patients)?	No	
13.00	If yes, is the percentage of product distributed at wholesale to providers or facilities within this state less than 5%? *Indicate actual percentage and if the percentage is based on number of units, number of prescriptions, dollar volume of total sales or dollar volume of prescription sales.*	N/A	
14.00	If yes, is the percentage of product distributed at wholesale to providers or facilities in other states less than 5%? *Indicate actual percentage and if the percentage is based on number of units, number of prescriptions, dollar volume of total sales or dollar volume of prescription sales.*	N/A

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
General Operations and Licensure — If any part of a question is no, enter "No" and explain the observation.			
15.00	Are pharmacy licenses, permits, and registrations (state, controlled substance, DEA, etc) posted in customers' view and current? *If no, provide details such as closed-door pharmacy, expired licenses, etc.*	Yes	
16.00	Is the most recent board of pharmacy inspection report available for review? *Record the date of the last inspection and how frequently the pharmacy is routinely inspected by the board.*	Yes	Florida Board of Pharmacy inspected on 3/5/2025 and inspect yearly.
17.00	Were any deficiencies noted? *Indicate the deficiencies and note whether they were corrected.*	Yes	Deficiencies noted included: 1. Incomplete label requirements 2. Coverall size was 3XL and was too big for compounder 3. Number of personnel present was not noted for certifications. 4. No documentations that DP reviewed 3 certification reports. 5. Use of sterilization filter beyond capacity and no bubble point testing documented. 6. End time not listed on autoclave log per SOP. 7. List of HD and assessment of risk was not present. Deficiencies were corrected.
18.00	Does the pharmacy hold ANY wholesale, distributor, or manufacturer licenses? *Document information in the license grid above for Resident State and in the Notes for Non-Resident States.*	No	
19.00	Has this pharmacy been inspected by any other state for which it holds a license? *If yes, note the state and the date of the inspection and frequency of inspections by other states.*	No	
20.00	Is the pharmacy operating under an exemption or restriction granted by the state in which the pharmacy is located or by any other state in which the pharmacy is licensed? *If yes, note the exemption or restriction.*	No	
21.00	Is the pharmacy operating under a waiver or variance granted by the state in which the pharmacy is located or by any other state in which the pharmacy is licensed? *If yes, note the waiver or variance.*	No	
22.00	Does the pharmacy have any additional restrictions, limitations, or waivers with regards to any federal licenses or registrations (FDA, DEA, etc)? *If yes, note the agency and additional item.*	No	
23.00	Has the pharmacy been inspected or visited by the DEA? *If yes, indicate the inspection/visit date and note any deficiencies. Also note how frequently the pharmacy is inspected/visited by the DEA.*	No

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
24.00	Has the pharmacy been inspected by the FDA? *If yes, indicate the inspection date and note any deficiencies, significant correspondence, or if a "483" was issued and date, and response and date. Also note how frequently the pharmacy is inspected by the FDA.*	No	
25.00	Does the pharmacy hold any accreditations or certifications? *If yes, indicate which and collect most recent date of survey.*	No	
26.00	Has the pharmacy held any accreditations or certifications in the past that they no longer hold? *Provide a list and the reasons for such.*	No	
27.00	Does the pharmacy perform patient lab testing such as blood glucose tests, cholesterol tests, etc? *Verify that the lab director is current (usually the PIC is the lab director named). If yes, record the Clinical Laboratory Improvement Amendments (CLIA) waiver information, expiration date, and the name of lab director listed.*	No	
28.00	Does the pharmacy maintain all required records, including but not limited to prescription files and invoices on site? *Record how long records are kept. If not on site, where?*	Yes	This is a new pharmacy but SOP states 2 years on site.
28.01	Are written and verbal prescriptions (reduced to writing) kept on site for the entire retention period? *If not, explain including how long they are stored on site?*	Yes	
28.02	Are electronic prescriptions (such as fax, e-scripts) kept on site for the entire retention period? *Describe how they are kept (electronically or printed and kept in hard copy).*	Yes	Electronic
28.03	Are all dispensing records (such as refills, verifications, DUR overrides) kept on site for the entire retention period? *Describe how they are kept (electronically or printed and kept in hard copy).*	Yes	Electronic
28.04	Are there systems in place to prevent a pharmacy record from being deleted after the prescription has been dispensed? *Describe how they are kept (electronically or printed and kept in hard copy).*	Yes	Electronic
28.05	If record are stored off site are they secure in a HIPAA compliant manner and readily retrievable?	N/A	
29.00	Is there a statement in the P&P, or are other means used to ensure that the most stringent laws/regulations are followed? *Describe system details.*	Yes	Andrew Mesiha PIC is responsible for ensuring the most stringent laws/regulations are followed. He stated his computer system will automatically update with any changes.

		Observation	Notes
	Personnel If any part of a question is no, enter "No" and explain the observation.		
30.00	Are all pharmacist, pharmacy intern, and pharmacy technician (if applicable) licenses or registrations with the board current and in good standing? *Describe how this is documented.*	Yes	Licenses renewals are printed yearly and kept in license binder.
31.00	Is there a process for periodic verification of validity of licenses? *Describe the process.*	Yes	Andrew Mesiha verifies licenses yearly.
32.00	If pharmacists are providing patient services that require additional training or certification, are they appropriately trained and certified? *(Immunization, CPR, MTM, etc.). Mark NA if no patient services that require additional training/certification. If yes, list certifications and if current?*	N/A	
33.00	Does the pharmacy maintain the proper technician-to-pharmacist ratio? *Mark N/A if not required by resident state. Indicate ratio used and the maximum number of staff who work at the same time.*	Yes	1:1 Maximum number of staff who work at the same time is 2.
	Facility and Security If any part of a question is no, enter "No" and explain the observation.		
34.00	Does the pharmacy have a working security/alarm system in place? *If yes, describe.*	Yes	ADT monitors with motion detectors, contact magnets on doors, cameras and glass break alarm.
35.00	Are Schedule II controlled substances secured in a locked cabinet or safe? *If not, describe how controlled substances are secured or stored.*	N/A	There are no Schedule II drugs.
36.00	Are there contingency plans in the event the pharmacy cannot be secured? *Describe how the drug products will be secured and handled.*	Yes	Emergency plan in their P&P. Contractor would secure building and a pharmacist would be on site until it was done. Drugs could be moved to one of the other common ownership retail pharmacies in greater Tampa area.
37.00	Is the pharmacy clean and sanitary, and is there appropriate space for the prescription volume? *Look for clutter, or crowded counters or stacks of prescriptions to be checked. If no, document with photo.*	Yes	
37.01	Is the working area well lit and free of tripping hazards? *If no, document with photo.*	Yes

		Observation	Notes
37.02	Is there a sink with hot and cold running water?	Yes	
37.03	If the pharmacy destroys prescription products on site (such as expired, damaged, recalled, etc), do they appropriately document the destruction? *View destruction logs. Mark NA if no destruction on site.*	N/A	
37.04	Does the pharmacy return prescription products to the manufacturer, distributor, or send to a reverse distributor for destruction? *If yes, indicate name of reverse distributor used.*	Yes	Trilogy MedWaste
37.05	Does the pharmacy have a hazardous waste handling and collection system? For example, empty bottles that contained chemotherapy medications or warfarin, or hazardous drug compounding waste. *If yes, indicate how often the bin is emptied/collected and the vendor used.*	Yes	Trilogy MedWaste empties the bins when the pharmacy requests.
38.00	Does the pharmacy have a private area for patient counseling and providing patient services? *Describe.*	Yes	There is a room that can be used for counseling to the right inside the front door.
39.00	Is temperature in the drug storage area maintained to provide controlled room temperature of 20° to 25°C (68° to 77 °F), or more restrictive if warranted by specific drug product storage requirements? *Describe. Record the temperature at the time of inspection.*	Yes	71°F
39.01	Is temperature monitoring in place to detect any excursions (24/7) by continuous monitoring or retroactive detection using min/max? Temperature records are maintained. *If yes, describe the process*	Yes	Elitech Technology Inc. monitors temperatures 24/7 and alerts Andrew Mesiha if there are any excursions beyond set ranges via cell phone and email.
39.02	Are excursion action plans in place including evaluating excursion effects on drug product integrity?	Yes	
40.00	Are the refrigerator and freezer restricted to drug products only (no food)?	Yes	
41.00	Does the pharmacy have a process for how the refrigerator temperature is monitored for excursions 24/7? *If yes, describe the process. Indicate range. How are excursions detected? How long are records maintained?*	N/A	The pharmacy does not carry any refrigerated medications.

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
41.01	Is the temperature in the refrigerator within the USP range (2°-8°C or 36°-46 °F) or as specified by FDA approved labeling for drug product storage? *Record the temperature of the refrigerator at the time of inspection.*	N/A	
42.00	Does the pharmacy have a process for how the freezer temperature is monitored for excursions 24/7? *If yes, describe the process. Indicate range. How are excursions detected? How long are records maintained?*	Yes	The range is between −25° to −10°C or −13° to 14 °F. Excursions are sent to Andrew Mesiha cell phone and emailed to the pharmacy. Records are maintained indefinitely.
42.01	Is the temperature in the freezer within the USP range (between −25° to −10°C or −13° to 14 °F) or as specified by FDA approved labeling for drug product storage? *Record the temperature of the freezer at the time of inspection.*	Yes	5.2°F
43.00	Are there contingency plans in the event of power outage or refrigerator/freezer failure? *Describe process.*	Yes	There are 5 other pharmacies in the Tampa area that have shared ownership where the drugs can be moved until a new freezer is obtained or the power is fixed.
44.00	Are there contingency plans in the event of heating or air conditioning failure? *Describe processes.*	Yes	Andrew Mesiha would work with local contractor to fix the issue. If necessary, the drugs can be moved to another pharmacy with common ownership.
45.00	Is there a plan of action if there are any temperature or humidity excursions to determine if the integrity of the products has been compromised?	Yes	
46.00	Does the pharmacy utilize any automated apparatuses for prescription processing/counting (such as robotics, Baker cells, etc)? *List numbers and types.*	No	
46.01	If yes, do they have and follow policies and procedures addressing cross-contamination and identification of drug products?	N/A

		Observation	Notes
Product Receipt and Inventory	**If any part of a question is no, enter "No" and explain the observation.**		
47.00	Does the pharmacy have a documented process for establishing sources (vendors) of prescription drugs? *Describe.*	Yes	FDA registered and inspected vendors are the only sources utilized by the pharmacy. Andrew Meshia is responsible for vetting all vendors.
47.01	Does the pharmacy purchase all prescription drugs directly from the manufacturer?	Yes	
47.02	Does the pharmacy purchase (obtain) prescription drugs from other pharmacies? *If yes, list pharmacy source information, and circumstances leading to the purchase.*	No	
47.03	Does the pharmacy purchase (obtain) prescription drugs from wholesale distributors (non-manufacturer sources)? *List non-manufacturer sources.*	No	
47.04	Does the pharmacy require wholesale distributor sources to purchase prescription drugs directly from the manufacturer? *If yes, how is this verified?*	N/A	
47.05	Does the pharmacy purchase drugs from wholesale distributors that purchased the drug from other wholesale distributors? *If yes, Describe the due diligence steps to determine the source's legitimacy and legitimacy of the drugs sold by the vendor. (For instance, does the pharmacy examine transaction histories and limit the number of movements of drugs between wholesale distributors, and look for pharmacies in the supply chain?)*	N/A	
47.06	Does the pharmacy determine that all sources listed on transaction histories have requisite state licensing? *If yes, describe the process.*	Yes	Andrew Mesiha validates all manufacturers through Florida Board of Pharmacy website.
47.07	Does the pharmacy determine that all sources listed on transaction histories have reported to FDA's Wholesale Distributor database? *If yes, describe the process.*	Yes	Andrew Mesiha checks the FDA Wholesaler Distributor database on line to verify.
47.08	Does the pharmacy have a process to handle suspect and illegitimate product investigations? *If yes, describe the process.*	Yes	If a suspect product is detected, it is segregated and an investigation is opened with the manufacturer.
47.09	Has the pharmacy conducted any suspect or illegitimate product investigations? *If yes, describe the details, including the drug, circumstances, outcome, and identification of agencies to whom reported.*	No	None to date.

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
47.10	Does the pharmacy ensure transaction data (transaction history, transaction information, transaction statement, also known as 3T data) is received at the same time or before the product is received? *Examine recent purchases to determine if the pharmacy is receiving and maintaining 3T data for a minimum of 6 years.*	Yes	
47.11	Does the pharmacy have a procedure to verify product (suspect or illegitimate) including quarantine of product and reporting?	Yes	
48.00	Does the pharmacy utilize paper DEA-222 forms to procure Schedule II substances? *If yes, how are they secured? Who has the authority (Power of Attorney) to sign the DEA-222 forms?*	N/A	There are no Schedule II drugs.
49.00	Does the pharmacy utilize CSOS (electronic Schedule II ordering) to procure Schedule II substances? *If yes, who can place orders in CSOS?*	N/A	
50.00	Is the receipt of Schedule II orders documented appropriately? *DEA-222 has the quantity and date on each line of product received, the CSOS record (electronic or paper printout) indicates verification of receipt and staff performing verification.*	N/A	
51.00	Are invoices for controlled substances (Schedules I-V) that are received filed separately and are the invoices signed/initialed and dated upon receipt and every item checked in?	Yes	
52.00	Are all orders received when the pharmacy is open? *Verify the orders are brought directly to the pharmacy still sealed and not delivered before the pharmacy is open.*	Yes	
53.00	Does the pharmacy purchase any compounded products from other entities for dispensing to patients? *If so, describe which products and from where they are purchase (collect name and license of other entity).*	No	
54.00	Does the pharmacy have a system in place to track prescription drug products in order to detect diversion or theft? *Describe (for example, inventory or shrink report tools used, perpetual inventory in computer, etc).*	Yes	Perpetual inventory to monitor inventory levels on high risk medication.

		Observation	Notes
54.01	Are incidents of diversion or resignation/termination of personnel for cause reported? *Indicate agencies/law enforcement to whom reports are made.*	Yes	Florida Board of Pharmacy and DEA.
55.00	Does the pharmacy keep a perpetual inventory log of all Schedule II controlled substances (including APIs, if applicable)?	N/A	
56.00	Is the Schedule II perpetual inventory log reconciled regularly? *Indicate how often the Schedule II controlled substances are counted. View the perpetual log and verify that reconciliation is taking place.*	N/A	
57.00	Is the most recent complete controlled substances inventory available for review? *Indicate the date of the last inventory and frequency taken (minimum every two years).*	Yes	2/27/2025 and taken yearly.
57.01	Does the pharmacy maintain other required inventories (such as change in PIC, theft/loss, etc)?	Yes	
58.00	Does the pharmacy stock and sell OTC pseudoephedrine (and/or ephedrine) products? If yes, indicate if the sale is recorded electronically or manually in a logbook.	No	
58.01	Are these products mailed, sent, or delivered into other states? *View logs. If yes, list the other states.*	N/A	
59.00	Does the pharmacy stock and sell other OTC restricted products for which ID is required and a log kept of the sale? *If yes, indicate product types.*	No	
59.01	Are these products mailed, sent, or delivered into other states? *View logs. If yes, list the other states.*	N/A	
60.00	Are outdated, damaged, or recalled products segregated? *If yes, how often does the pharmacy check for out-of-date products? Does it include OTC products?*	Yes	Monthly and includes OTC.
60.01	Are all drugs within active-stock within expiration date? *Examine shelves, refrigerator and freezer.*	Yes	Examined

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

General Pharmacy Inspection

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.
An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, t.L.C dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
60.02	How often is active-stock examined for drugs past the expiration date?	[redacted]	Monthly
61.00	Does the pharmacy **prepackage** bulk containers of prescription medications into smaller containers for ease of use? *What BUD is used on the prepackaged container?*	No	
62.00	Does the pharmacy **prepack** multiple drugs into a single container for compliance packaging? *What BUD is used on the prepacked containers?*	No	
63.00	Does the pharmacy return to stock prescription drugs that were filled but never picked up?	Yes	
63.01	If yes, are they maintained in the appropriate container, with PHI removed and BUD adjusted?	Yes	

Prescription Processing

If any part of a question is no, enter "No" and explain the observation.

64.00	**Patient Profile:** Is patient profile data organized and readily accessible to facilitate consultation with the prescriber, patient, or caregiver? *Indicate who enters patient profile data into the computer system and how often it is updated?*	Yes	Technician checks and updates on each fill date.
64.01	If the pharmacy dispenses veterinary prescriptions, does the information gathered and recorded include the species, and name of the animal/owner as required by resident state law? *Describe how it is indicated in the computer system that the patient is an animal? And how is it indicated in the system the prescription is a veterinary prescription?*	Yes	Computer signifies its an animal and logs owners names in patient profile.
65.00	**Prescription:** Are adequate processes in place to assure the integrity, legitimacy, and authenticity of prescription orders? *Staff is familiar with detecting fraud in hard copy, faxed, verbal, and electronic prescriptions.*	Yes	
65.01	Is there a procedure to follow when a prescription is suspected of (or actually is) fraudulent? *Describe the steps and raporting process.*	Yes	Contact the prescriber and verify the prescription. Watch for red flags.

The information and comments obtained in the Nonsterile Compounding, Sterile Compounding Inspections, and Hazardous Drug Compounding are based on USP Chapters <795>, <797>, and <800>.
An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
65.02	Are adequate processes in place for assuring that prescription medications are not prescribed or dispensed based on online medical consultations without there being a pre-existing prescriber-patient/client relationship? *Describe. Do the processes include comparing the physical addresses of the patient and prescriber?*	Yes	The pharmacist would contact the physician and ask for clinical data to support the prescription. The pharmacist would also compare the addresses of patient and physician.
65.03	Does the pharmacy have electronic prescription capability? *Indicate whether it is for non-controlled substances, controlled substances, or both.*	Yes	Both
65.04	If the pharmacy accepts electronic prescriptions for controlled substances, are they in compliance with federal regulations?	Yes	
66.00	**Accuracy:** Is the accuracy of the information entered into the computer system verified (patient information and prescription information)? *Indicate how and by whom.*	Yes	The pharmacist verifies all information that the technician enters at data entry.
67.00	**DUR:** Does staff conduct prospective DUR prior to the dispensing of a medication or product? *Describe at what point in the process does the DUR take place?*	Yes	The technician performs data entry and the pharmacist verifies this information/performs DUR. The technician compounds the prescription and the pharmacist does final verification of the product.
67.01	Does the DUR include: • drug-drug interaction (Prescription and OTC), • drug-allergy interaction, • therapeutic duplication, • under- or over-utilization (including clinical abuse/misuse), • disease state or condition contraindication, • Incorrect dosage or duration of therapy, and • gender or age related contraindications. *Indicate if there are other parameters routinely included in the DUR.*	Yes	
67.02	In addition to the pharmacy DUR software, does the pharmacy staff obtain other information to use in the DUR process? *Describe.*	Yes	Pharmetika
67.03	Does the pharmacy have adequate resources/references related to the type of pharmacy practice it operates?	Yes

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
67.04	Does the pharmacy report required data to the state PMP (in this state and the other states in which the pharmacy is licensed)? *Describe.*	Yes	Computer software reports PMP information daily to Florida.
67.05	Does the pharmacy access state PMP/PDMP data for specific patients? *Verify there is a policy regarding access and follow-up or reporting and that pharmacist can access the PMP data.*	Yes	
67.06	Are DUR overrides/bypasses documented? *Indicate how the override is documented and who has override capability.*	Yes	Only the pharmacist can override a DUR and it is documented in patient profile.
67.07	Is the DUR process performed electronically by the computer system? ***Identify integrated drug database used.***	Yes	Pharmetika
67.08	If the DUR is manual, is there a system to document: • How manual DUR is performed • Specific issues that were identified • Pharmacist that considered the identified issues and gave the okay to proceed	Yes	
67.09	If the pharmacy dispenses veterinary prescriptions, does it have a veterinary drug database integrated into the computer system for electronic DUR? *List veterinary product electronic database used. If not, list compendia used for performing manual DUR.*	Yes	Pharmetika
68.00	Are filled prescriptions verified for accuracy prior to dispensing? *Indicate process, by whom, and how documented.*	Yes	The technician performs data entry and the pharmacist verifies this information/performs DUR. The technician compounds the prescription and the pharmacist does final verification of the product.
69.00	Are filled prescriptions appropriately labeled? *Describe.*	Yes	All labels meet federal requirements.
70.00	**Confidentiality:** Does the system have adequate safeguards to prevent a user from performing functions under a different user account or beyond what they are authorized to perform? *Password protected, access limited by job type, access revoked as appropriate such as upon termination. Record name/brand of pharmacy computer system used.*	Yes	Pharmetika

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
70.01	Does the pharmacy destroy PHI including labeled prescription vials?	Yes	
71.00	**Mail/Delivery:** If applicable, are packing materials designed to maintain the physical integrity, stability, and purity of prescription medications and compounded preparations in transport?	Yes	
72.00	**Off-Site Processes:** Are any portions of the prescription processing (in the questions below) performed at a different location? ***Note: Please ask each question below to verify.***	No	
72.01	If yes, is the other location under common ownership? *If not commonly owned, explain if there is a central fill/shared services or other agreement in place. Record the name and license number for the other location.*	N/A	
72.02	If yes, is that location in a different state than this facility? *If so, explain.*	N/A	
72.03	If yes, are there policies and procedures for identifying who is responsible for each step of prescription processing?	N/A	
73.00	**Off-Site Inventory:** Does the pharmacy maintain any emergency kits in nursing homes, long-term care facilities, or other entities (such as hospice, EMTs, ambulances)? *Note name(s) of facilities or entities.*	No	
73.01	Do the emergency kits contain any compounded products? *If so, indicate whether sterile and/or nonsterile and are these stored, non-patient specific?*	N/A	
74.00	**Off-Site Inventory:** Does the pharmacy maintain any automated prescription dispensing devices outside the pharmacy such as Pyxis in a nursing home, or a secure mailbox device that patients access after hours, etc? *Note types and locations.*	No	
74.01	If yes, are the automated devices appropriately licensed, registered, or approved by the board of pharmacy? *Provide details.*	N/A	
74.02	Do the automated dispensing devices contain any compounded products? *If so, indicate whether sterile and/or nonsterile and are these stored, non-patient specific?*	N/A

		Observation	Notes
Patient Counseling and Communication	**If any part of a question is no, enter "No" and explain the observation.**		
75.00	Does the pharmacist provide counseling for all new prescriptions picked up at the pharmacy (proactively, no "offer")?	No	
75.01	Is an "offer" to counsel made for all new prescriptions picked up at the pharmacy? *Indicate who makes the "offer".*	Yes	Technician and pharmacist
76.00	Does the pharmacist provide counseling for all refilled prescriptions picked up at the pharmacy (proactively, no "offer")?	No	
76.01	Is an "offer" to counsel made for all refilled prescriptions picked up at the pharmacy? *Indicate who makes the "offer".*	Yes	Technician and pharmacist
77.00	Does the pharmacist provide counseling for refilled prescriptions picked up at the pharmacy when there is a change in therapy or other issue determined by the pharmacist (proactively, no "offer")?	No	
77.01	Is an "offer" to counsel made for all refilled prescriptions picked up at the pharmacy when there is a change in therapy or other issue determined by the pharmacist? *Indicate who makes the "offer".*	Yes	Technician and pharmacist
78.00	Is patient counseling provided for delivered prescriptions? *Printed information sent to patient, toll-free number for patients to call, pharmacist calls patients directly, etc? Describe how.*	Yes	Patient is called before delivery and counseling is offered over the phone. There is also a handout that is in the packaging with phone number to contact the pharmacist.
79.00	Is patient counseling provided for mailed prescriptions? *Printed information sent to patient, toll-free number for patients to call, pharmacist calls patients directly, etc? Describe how.*	Yes	Patient is called before delivery and counseling is offered over the phone. There is also a handout that is in the packaging with phone number to contact the pharmacist.

		Observation	Notes
80.00	Are patient package inserts (PPIs) provided with every fill and refill of medications for which they are required (such as hormone products, inhalers, etc)? *Describe how.*	Yes	Computer system automatically prints.
81.00	Are MedGuides provided with every fill and refill of medications for which they are required (such as NSAIDS, antidepressants, etc)? *Describe how.*	Yes	Their computer system has the capability to automatically print when the drug is dispensed.
82.00	Are REMS (Risk Evaluation Mitigation Strategy) implementation programs performed? Confirm that procedures are in place. *List programs (such as iPledge for isotretinoin, or Tikosyn).*	N/A	The pharmacy does not dispense these medications.
83.00	Is patient counseling, the offer to counsel, or the refusal of patient counseling documented? *Describe how.*	Yes	This is documented in notes section of the patient profile.
84.00	Do patients have 24-hour access to a pharmacist? *Note: may not be required by the resident state. Describe how (such as posted contact information and hours of operation).*	Yes	Pharmacist cell phone is listed. Toll free number goes directly to pharmacist cell phone.
85.00	Are processes in place to handle a drug recall?	Yes	
86.00	Does the pharmacy accept prescription drugs back for destruction as part of a drug take-back program?	No	
86.01	Does the take-back program include controlled substances?	N/A	
86.02	Does the pharmacy have a modified DEA registration for controlled substance take-back? *If yes, list.*	N/A

		Observation	Notes
Quality Assurance/Quality Improvement Program	**If any part of a question is no, enter "No" and explain the observation.**		
87.00	Is there a documented continuous quality improvement (CQI) Program for the purpose of detecting, documenting, assessing, and preventing quality related events (QREs)? *If yes, list who oversees the program.*	Yes	Andrew Mesiha
87.01	Policies and procedures for the program are maintained in the pharmacy in an immediately retrievable form. *Indicate if hard copy, electronic, or both.*	Yes	Both
87.02	"Quality-Related Event" (QRE) is defined to mean any departure from the appropriate dispensing of a prescribed medication that is or is not corrected prior to the delivery and/or administration of the medication including (but not limited to): 1. a variation from the prescriber's prescription drug order such as incorrect drug, strength, form, or patient; or inadequate or incorrect packaging, labeling, or directions; 2. a failure to identify and manage over-utilization or under-utilization; therapeutic duplication; drug-disease contraindications; drug-drug interactions incorrect drug dosage or duration of drug treatment; drug-allergy interactions; or clinical abuse/misuse. 3. packaging or warnings that fail to meet recognized standards, the delivery of a medication to the wrong patient, or the failure to detect and appropriately manage a significant actual or potential problem with a patient's drug therapy.	Yes	
87.03	There is documentation of initial/ongoing (at least yearly) review and training of all pharmacy employees on the CQI program and processes. *For example, may be formal training or reviewed at a yearly meeting.*	N/A	Pharmacy has only been opened since 3/6/2025 but it is in SOP.
88.00	**Documentation of QREs** starts as soon as possible, but no more than three days, after determining their occurrence. *Indicate if documentation/forms are hard copy or electronic.*	Yes	Both
88.01	Documentation includes all the pertinent data about the prescription involved including personnel involved at each step.	Yes	
88.02	Documentation includes documenting the type of QRE details and how/who discovered the QRE.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
88.03	Documentation incudes possible contributing factors such as day and time the QRE occurred, number of pharmacists and technicians on duty, prescription volume that day, equipment failure, or other factors affecting work-flow at the time.	Yes	
88.04	Documentation includes steps taken to remediate including communications with the patient and the provider, and if the medication was ingested, disposition of the patient.	Yes	
89.00	**QRE data** collected is analyzed to assess causes and any contributing factors (root cause). *Indicate who performs the analysis and frequency (with each event, weekly, monthly, quarterly, etc).*	Yes	Andrew Mesiha analyzes data with each event.
89.01	The pharmacy uses the findings of the analysis to formulate an appropriate response and develop pharmacy systems and workflow processes designed to prevent QREs and increase good outcomes for patients.	Yes	
89.02	For pharmacies utilizing a drug formulary, a periodic review of such formulary is undertaken to ensure that appropriate medications are being offered/selected in the best interest of patients.	Yes	
90.00	**Quality meetings** are held at least annually by staff members of the pharmacy to consider the effects on quality of the pharmacy system due to staffing levels, workflow, and technological support.	Yes	
90.01	The meeting reviews data showing evidence of the quality of care for patients and develops plans for improvements to increase good outcomes for patients.	Yes	
90.02	Improvements or changes made are evaluated for performance to measure the effectiveness of the CQI program.	Yes

		Observation	Notes
91.00	**Reporting:** Incidents of QREs are reported to a nationally recognized error reporting program, an outside peer review committee, or a patient safety organization. *Indicate which organizations are reported including if the pharmacy reports QREs to the board of pharmacy.*	Yes	Florida Board of Pharmacy
91.01	Adverse events are reported to the appropriate entities such as the board of pharmacy, MedWatch, FDA, VAERS, etc?	Yes	
91.02	Incidents involving malfunctioning or defective medical equipment or devices (blood glucose meters, DME, injection devices, etc) are documented and reported to the manufacturer or distributor.	Yes	
92.00	**Quality Self-Audits** are performed by the pharmacy at least quarterly (and upon change in PIC) to determine whether the occurrence of QREs has decreased and whether there has been compliance with preventative procedures, and to develop a plan for improved adherence with the CQI program in the future.	Yes	
93.00	**Consumer Surveys** are conducted at least yearly of patients who receive pharmaceutical products and services at the pharmacy. A statistically valid sampling technique may be used in lieu of surveying every patient. Each pharmacy should use the results of its consumer survey to evaluate its own performance at a particular time and over a period of time.	Yes	
94.00	**Patient Complaints** are documented, tracked, and investigated as appropriate and the information is used as part of the CQI program.	Yes

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Standard Operating Procedures for Compounded Nonsterile Preparations (CNSPs)		Please note NABP did not review each SOP for alignment on USP<795>. The SOP(s) described below is/are a reflection of any self-assessment completed by the pharmacy and/or shared with the inspector during the onsite inspection.	
1.0	Does the pharmacy have standard operating procedures (SOPs) on all aspects of the compounding operation that cover the minimum topic requirements in USP <795> standards? ***If no, document "missing" in Inspector Notes*** ***If yes, document the name, number, and version of each SOP in the Inspector Notes.***	Yes		11
1.1	**Buildings and Facilities:** The pharmacy has an SOP for the compounding facility. ***Inspector note: Per USP <795>, there is a written SOP for "the method of designation" for the area designated specifically for nonsterile compounding and processes for maintaining, cleaning, and sanitizing the compounding area and equipment.***		SOP 8.7 Nonsterile Area Requirements	4.1, 5, 11
1.2	**Personnel Training and Evaluation:** The pharmacy has an SOP describing the training program, the frequency of training, and the process for evaluating the competency of personnel. ***Inspector note: Per USP <795>, "Facility SOPs must describe procedures for monitoring and observing of compounding activities and personnel."***		SOP 8.8 Nonsterile Compounding Training and Evaluation	2, 11
1.3	**Personal Hygiene and Garbing:** The pharmacy has an SOP regarding personal hygiene, glove, and garbing requirements consistent with compounding activities. ***Inspector note: Per USP <795>, "Garbing requirements and frequency of changing garb must be determined by the facility and documented in the facility's SOPs."***		8.9 Personnel Hygiene and Garbing for Nonsterile Compounding	3.3, 11
1.4	**Components:** The pharmacy has an SOP describing selection, handling, storage, and inventory control of all components used in compounding. ***Inspector note: Per USP <795>, "The compounding facility must have written SOPs for the selection and inventory control of all components from receipt to use in a CNSP."***		5.1 Inventory Storage and Handling	6.2, 11

Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
1.5	**Temperature Monitoring:** The pharmacy has an SOP regarding temperature monitoring and handling of excursions. ***Inspector note: Per USP <795>, "The compounding facility must adhere to SOPs to detect and reduce the risk of temperature excursions within the storage area(s)."***		5.1 Inventory Storage and Handling	4.2, 11
1.6	**Equipment:** The pharmacy has an SOP for assessment of need for closed system processing devices (based on the types of CNSPs prepared). ***Inspector note: Per USP <795>, "Weighing, measuring, or otherwise manipulating components that could generate airborne chemical particles (e.g., active pharmaceutical ingredients [APIs], added substances, and conventionally manufactured products) must be evaluated to determine if these activities must be performed in a closed-system processing device to reduce the potential exposure to personnel or contamination of the facility or CNSPs. Examples of closed-system processing devices include containment ventilated enclosures (CVEs), biological safety cabinets (BSCs), and single-use containment glove bags. The process evaluation must be carried out in accordance with the facility's SOPs, and the assessment must be documented."***		8.7 Nonsterile Area Requirements	6.1, 11
1.7	**Safety Data Sheet (SDS)/Spill Management:** The pharmacy has an SOP describing spill management and disposal. ***Inspector note: Per USP <795>, "The management and documentation of nonhazardous component spills and disposal must be described in the facility's SOPs."***		9.2 General Spill Management (nonHD)	6.2.5, 11
1.8	**Master Formulation Records (MFR):** The pharmacy has an SOP on the process for MFR creation and content. ***Inspector note: Per USP <795>, "Any changes or alterations to a Master Formulation Record are approved and documented in accordance with the facility's written SOP."***		SOP 3.10 MFR (Master Formulation Record)	7.1, 11
1.9	**Labeling:** The pharmacy has an SOP on the processes for labeling, label verification (confirming against the prescription or medication order, the MFR, and the compounding record (CR)) in order to prevent errors and CNSP mix-ups and required displayed information. ***Inspector note: Per USP <795>, "Labeling procedures must be followed as described in the facility's SOPs to prevent labeling errors and CNSP mix-ups."***		SOP 9.3 Labeling of CNSP	9, 11

Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
1.10	**Quality Assurance (QA)/Quality Control (QC) Program:** The pharmacy has an SOP regarding its QA and QC program, including roles of the designated person(s), trainers, compounding personnel, adherence to procedures, and prevention and detection of errors and quality issues. ***Inspector note: Per USP <795>, "QA and QC programs must be formally established and documented in SOPs that ensure that all aspects of the preparation of CNSPs are conducted in accordance with this chapter, and laws and regulations of the applicable regulatory jurisdiction."***		SOP 9.4 Quality Program for CNSP	11, 12 USP <1163>
1.11	**QA/QC Program Complaint Handling and Adverse Event Reporting:** The pharmacy has an SOP for evaluation of complaints and adverse events, including investigations and corrective actions. ***Inspector note: Per USP <795>, the pharmacy, "must develop and implement SOPs for complaint handling." SOPs are to include any state or federal requirements for reporting to government agencies (example adverse event reporting). Further, "Consider whether to initiate a recall of potentially affected CNSPs and whether to cease compounding until problems have been identified and corrected."***		SOP 8.1 CQI (Continuous Quality Improvement	1.1.3, 11, 12.1, 12.2, 12.3
1.12	**Packaging:** The pharmacy has an SOP describing packaging CNSPs. ***Inspector note: Per USP <795>, "SOPs must describe packaging of CNSPs:"***		SOP 5.3 Packaging and Delivery of Compounded Medications	11, 13.1
1.13	**Transporting:** The pharmacy has an SOP describing transporting CNSPs. ***Inspector note: Per USP <795>, there must be "written SOPs to describe the mode of transportation, any special handling instructions, and whether temperature monitoring devices are needed."*** ***If the pharmacy does not transport CNSPs, inspector should answer statement as N/A.***		SOP 5.3 Packaging and Delivery of Compounded Medications	11, 13.2

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
1.14	**Recalls:** The pharmacy has an SOP describing minimum requirements for recalls. ***Inspector note: Per USP, "The facility must have procedures in place to:*** ***- Determine when recalls must be initiated, which should include procedures to immediately notify the prescriber of a failure of specifications with the potential to cause patient harm (eg, strength, purity, or other quality attributes)*** ***- Recall any unused dispensed CNSPs and quarantine any stock remaining in the pharmacy*** ***- Investigate if other lots are affected and recall if necessary*** ***An SOP for recall of dispensed CNSPs must contain:*** ***- Procedures to determine the severity of the problem and the urgency for implementation and completion of the recall*** ***- Procedures to determine the distribution of any affected CNSP, including the data and quantity of distribution*** ***- Procedures to identify patients who have received the CNSP*** ***- Procedures for disposal and documentation of the recalled CNSP (and)*** ***- Procedures to investigate and document the reason for recall."***		SOP 8.3 Recalls	12.1
	Designated Person(s) and Personnel Training Program Inspector must complete the <795> Records Review module to complete this section.			
2.0	Does the pharmacy have a designated person(s) who meets the requirements in USP <795> standards? ***Inspector note: Per USP, "The compounding facility must designate one or more individuals to be responsible and accountable for the performance and operation of the facility and personnel in the preparation of CNSPs."*** ***If no, go to compliance statements.***	Yes		1.1.4
2.1	The designated person(s) (for the QA program) has the training, experience, responsibility, and authority to perform the duties required of them.	Yes		1.1.4, 12

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
2.2	The designated person(s) reviews facility SOPs at least every 12 months to ensure that they reflect current practice and such review is documented. ***Inspector note: Per USP, "The facility's SOPs must describe the roles, duties, and training of the personnel responsible for each aspect of the QA program... The overall QA and QC program must be reviewed at least once every 12 months by the designated person(s). The results of the review must be documented, and appropriate action must be taken if needed."***	Yes		1.1.4, 12
2.3	The designated person(s) is responsible for overseeing a training program to ensure competency of personnel involved in compounding, handling, and preparing CNSPs.	Yes		1.1.4, 2
2.4	The designated person(s) is responsible for selecting components used by the pharmacy.	Yes		1.1.4, 6.2.1
2.5	The designated person(s) is responsible for monitoring and observing compounding activities and taking immediate corrective action if deficient practices are observed.	Yes		1.1.4
2.6	The designated person(s) is responsible for ensuring SOPs are fully implemented and following up if problems, deviations, or errors are identified.	Yes		1.1.4, 11
2.7	The designated person(s) is responsible for establishing, monitoring, and documenting procedures for the handling and storage of CNSPs and/or components of CNSPs.	Yes		1.1.4
3.0	Has the pharmacy created and implemented a training program that is in compliance with USP <795> standards? ***Inspector note: Per USP, "Training and competency of personnel must be documented."*** ***Inspector is to review a minimum of five personnel records and document their observations (see <795> Records Review module).*** ***If no, go to compliance statements.***	Yes	There are only 2 compounding employees records to review, since new pharmacy.	2, 14

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
3.1	All personnel who compound CNSPs have been initially trained and qualified before being allowed to independently compound (eg, perform their job functions). ***Inspector note: Per USP, compounding personnel are defined as "Personnel trained to compound or oversee compounding of preparations."*** ***If questions 1.0-1.12 in the records review tab for compounding personnel are answered "no" or "missing," this statement should be answered as no. For details, see Records Review module.***	Yes		2, 14
3.2	All personnel who have direct oversight, perform in-process checks, final verification of a CNSP, and/or dispense a CNSP have been initially trained and qualified (according to SOPs) being allowed to independently perform their job functions. ***If questions 1.0-1.12 in the records review tab for compounding personnel are answered "no" or "missing," this statement should be answered as no. For details, see Records Review module.***	Yes		2, 14
3.3	All compounding personnel, including those who have direct oversight of compounding personnel, have completed an initial training and at least every 12 months thereafter. ***Inspector note: Per USP, "Other personnel, who do not compound and only perform functions such as in-process checks, final verification, or dispensing of CNSPs must undergo training as required by the facility's SOPs."*** ***If questions 2.0-2.12 in the records review tab for compounding personnel or personnel who have direct oversight over compounding personnel are answered "no" or "missing," this statement should be answered no. For details, see the Records Review module.***	Yes		2, 14
4.0	Does the designated person(s) have a documented (periodic) evaluation of their direct observations for compounding activities and documentation of any deficiencies in the record? ***Inspector note: Per USP, this is a recommendation, "the designated person(s) should monitor and observe compounding activities and must take immediate corrective action if deficient practices are observed. Facility SOPs must describe procedures for monitoring and observing compounding activities and personnel."*** ***Inspector should complete the <795> Records Review module question 3.0.***	Yes		2, 14

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Compounding Personal Hygiene and Garbing			
5.0	Does the pharmacy have a process to ensure all personnel entering the compounding area adhere to restrictions intended to minimize the risk of contamination in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		3
5.1	Compounding personnel are required to report to the designated person(s)conditions that may contaminate the compounding preparation area. ***Inspector note: Per USP <795>, examples of conditions that have a higher risk of contaminating the CNSP include: rashes, recent tattoos, open sores, conjunctivitis, and active respiratory infection.***	Yes		
5.2	The designated person(s) is responsible for evaluating whether compounding personnel should be excluded from working in the compounding areas before their conditions have resolved.	Yes		3
5.3	Personnel removes any unnecessary items (outer garments, jewelry that could interfere with garbing, and earbuds/headphones) before entering the compounding area. ***Inspector note: Inspector should also observe compounding area to identify any items stored that do not belong (ie, dirty garments, jackets, or electronics).***	Yes		3.1
5.4	If personnel do not remove an item, the designated person has determined that the quality of the environment and CNSPs are not adversely affected by the accommodation.	Yes		3.1
6.0	Do personnel perform hand hygiene, wear required garb and gloves, and follow requirements in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		3.3
6.1	All personnel entering the compounding area complete hand hygiene procedures.	Yes		3.2 Box 1

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
6.2	Garb is used for all compounding activities. ***Inspector note: Per USP <795>, gloves are mandatory garb for all compounding activities.***	Yes		3.2, 3.3 Box 1
6.3	Pharmacy uses SDS to determine other garb requirements for the components and compounding activity.	Yes		3.3
6.4	Additional garb (shoe covers, hair and facial hair covers, face masks, gowns) is worn as needed for protection of the personnel/CNSPs. ***If no, please list the garb worn for the type of component and compounding activity.***	Yes		3.3
6.5	The garb purchased by the pharmacy is appropriate for the type of compounding being performed.	Yes		3.3
6.6	Garb is stored in manner that minimizes risk of contamination (away from sinks to avoid splashing, etc).	Yes		3.3
6.7	Gowns that are reused do not leave the compounding area.	Yes		3.3
6.8	Visibly soiled garb or garb with tears or punctures are changed immediately (are not reused).	Yes		3.3
6.9	Soiled garb is disposed of or sent for laundering.	Yes		3.3
6.10	Shoe covers, hair and facial hair covers, face masks, and head covers are not reused once personnel have left the compounding area.	Yes		3.3
7.0	Are non-disposable garb such as goggles cleaned then sanitized with 70% isopropyl alcohol before re-use?	Yes		3.3

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Buildings and Facilities			
8.0	Does the compounding area meet the facility requirements in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		4.1
8.1	The pharmacy has a designated compounding space for nonsterile compounding.	Yes		4.1
8.2	The compounding area is well lit.	Yes		4.1
8.3	The compounding area is clean and sanitary.	Yes		4.1
8.4	The compounding area is orderly (eg, clutter-free, no tripping hazards).	Yes		4.1
8.5	The compounding area is in a good state of repair.	Yes		4.1
8.6	The compounding area is designed for orderly placement of equipment and materials to prevent mix-ups among components, containers, labels, in-process materials, and finished CNSPs.	Yes		4.1
8.7	The compounding area is not being used for other activities at the same time that it is used for compounding.	Yes		4.1
8.8	The compounding area is designed, arranged, and used in a manner that minimizes cross contamination from non-compounding areas.	Yes		4.1
9.0	Is the compounding area free of carpet?	Yes		4.1

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
10.0	Does the pharmacy's storage area (for CNSPs, components, equipment, and containers) meet requirements in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		4.2
10.1	The pharmacy records the temperature of the compounding storage area on days when the pharmacy is open. ***Inspector note: Per USP, "Compounding personnel must monitor temperatures in the storage area(s) either manually at least once daily on days that the facility is open, or continuously with a temperature recording device to ensure the temperature remains within the appropriate range for the CNSPs and components."*** ***If pharmacy does not use a continuous recording system, describe the frequency of temperature recording in the notes.***	Yes	Temperatures are monitored continuously.	4.2
10.2	The pharmacy's temperature monitoring records are readily retrievable. ***Inspector note: Per USP, "The results of the temperature readings must be documented on a temperature log or stored in the continuous temperature recording device and must be retrievable."***	Yes		4.2
10.3	Temperature monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. ***Inspector note: Per USP, "All temperature monitoring equipment must be calibrated or verified for accuracy as recommended by the manufacturer or every 12 months if not specified by the manufacturer." USP reports that these devices may be verified against a calibrated device.*** ***Monitoring devices are typically calibrated or replaced.***	Yes		4.2
10.4	Pharmacy has a process to evaluate temperature excursions. ***Inspector note: Per USP, "When it is known that a CNSP or component has been exposed to temperatures either below or above the storage temperature limits for the CNSP or component, personnel must determine whether the CNSP or component integrity or quality has been compromised and if so, the CNSP or component must be discarded."***	Yes		4.2
10.5	CNSPs, components, equipment, and containers are stored off the floor.	Yes		4.2

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
10.6	CNSPs, components, equipment, and containers are stored in a manner that permits inspection and cleaning of the storage area(s).	Yes		4.2
10.7	CNSPs, components, equipment, and containers are stored in a clean environment (free of dirt, dust, and debris, and rodent/pest/insect free) to prevent contamination.	Yes		4.2
11.0	What is the current temperature of the nonsterile compounding storage area? ***Record in the Inspector Notes.***	[redacted]	71°F	4.2
12.0	Are plumbing fixtures, water sources, and cleanliness of sink in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		4.3
12.1	The pharmacy staff can easily access a sink within or nearby the nonsterile compounding area.	Yes		4.3
12.2	There is hot and cold running water available at the sink within or nearby the nonsterile compounding area.	Yes		4.3
12.3	The sink is emptied of all items unrelated to compounding and before being used to clean any equipment used in nonsterile compounding.	Yes		4.3
12.4	The sink is cleaned when visibly soiled (before being used to clean equipment used in nonsterile compounding).	Yes		4.3
12.5	The plumbing system is free of any defects that may contribute to contamination of CNSPs.	Yes		4.3
13.0	Is purified water, distilled water, or reverse osmosis water used for rinsing equipment and utensils used in nonsterile compounding? ***Inspector note: This is a USP recommendation.***	Yes	Purified water	4.3 USP <1231>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Cleaning and Sanitizing			
14.0	What agent(s) are used for cleaning and sanitizing the nonsterile compounding area? ***Inspector note: Per USP <795>, "agents must be selected and used with consideration of compatibilities, effectiveness, and minimal potential to leave residues."*** ***List the agents in the Inspector Notes.***		PREempt RTU and Contec IPA 70%	5
15.0	Does the pharmacy perform cleaning and sanitizing activities on all surfaces at the minimum frequency per Table 1 and documented in a log or other record in compliance with USP <795> standards? ***Review compounding cleaning logs.*** ***If no, go to compliance statements.***	Yes	Compounding cleaning logs reviewed.	5 Table 1
15.1	All work surfaces are cleaned and sanitized at the **beginning of each shift** on days when compounding occurs.	Yes		5 Table 1
15.2	All work surfaces are cleaned and sanitized at the **end of each shift** on days when compounding occurs.	Yes		5 Table 1
15.3	All work surfaces are cleaned and sanitized **between compounding CNSPs with different components.**	Yes		5 Table 1
15.4	Floors are cleaned and sanitized daily on days when compounding occurs.	Yes		5 Table 1
15.5	Walls and ceilings are cleaned and sanitized when visibly soiled. ***Inspector note: No specific frequency is specified by USP. View compounding area walls and ceilings. If inspector observes soiled walls or ceilings, inspector should answer statement as no.***	Yes		5 Table 1
15.6	All work surfaces, floors, walls, ceilings and storage shelving are cleaned and sanitized when surface contamination (eg, splashes) or spills are known or suspected.	Yes		5 Table 1
15.7	Storage shelving is cleaned and sanitized at least every three months.	Yes		5 Table 1
16.0	Are floors in the compounding area easily cleanable, non-porous and non-particle generating? ***Inspector note: This is a USP recommendation. Per USP, "Surfaces should be resistant to damage by cleaning and sanitizing agents."***	Yes		5

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Equipment and Components FDA defines manufacturer... as used in section 510 of the Federal Food, Drug, and Cosmetic Act, includes the activities of relabelers, repackers, and salvagers. When not modified by "domestic" or "foreign," the term includes both domestic manufacturers and foreign manufacturers.			
17.0	Does the pharmacy use a closed-system processing device (eg, CVE, BSC, and single-use containment glove bags)? ***Inspector note: Per USP, examples of closed-system processing devices include: containment ventilated enclosures (CVEs), biological safety cabinets (BSCs), and single-use containment glove bags.*** ***If yes, list the type(s) in the Inspector Notes.***	Yes	BSC and Laminar Flow Powder Hood	6.1
18.0	Does the pharmacy select, store, clean, and maintain equipment in compliance with USP <795> standards? ***Inspector note: Per USP <795>, "Equipment surfaces that contact components are not reactive, additive, or sorptive, and must not alter the quality of CNSPs."*** ***Review certification reports, calibration records, and cleaning logs.*** ***If no, go to compliance statements.***	Yes	Reviewed	6.1
18.1	Equipment and supplies are readily available at the pharmacy for the types of CNSPs prepared. ***Inspector note: For example, if the pharmacy compounds with API as a component, which must be weighed, a scale or balance would be expected.***	Yes		6.1
18.2	Pharmacy has evaluated and documented the nonsterile compounding pharmacy activities for weighing, measuring, and otherwise manipulating for an assessment of risk. ***Inspector note: Per USP, "components that could generate airborne chemical particles (eg, active pharmaceutical ingredients [APIs], added substances, and conventionally manufactured products) must be evaluated to determine if these activities must be performed in a closed-system processing device to reduce the potential exposure to personnel or contamination of the facility or CNSPs."*** ***If no, inspector should describe observations.***	Yes		6.1

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
18.3	The equipment and devices used for compounding CNSPs are clean and stored in a manner and frequency that minimizes the risk of contamination. ***Inspector note: Per USP <795>, "After compounding, the equipment must be cleaned to prevent cross contamination of the next preparation." Additionally, per Table 2:*** ***- CVE/BSC are cleaned and sanitized at the beginning and end of each shift when compounding occurs, after spills, and when surface contamination (e.g., from splashes) is known or suspected;*** ***- CVE/BSC horizontal surfaces are cleaned and sanitized between compounding of different components;*** ***- Under the work surface of a BSC is cleaned and sanitized at least monthly; and*** ***- Other devices and equipment used in compounding are cleaned before initial use, in between compounding CNSPs with different components, and following manufacturer recommendations.*** ***If no, inspector should describe observations.***	Yes		6.1 Table 2
18.4	Equipment and devices used in compounding or testing of CNSPs are inspected prior to use (to ensure they are in good working order). ***Inspector note: For example, the pharmacy may need to tare a scale and/or balance prior to use.***	Yes		6.1
18.5	Equipment and devices are verified for accuracy as recommended by the manufacturer (at the frequency recommended by the manufacturer or at least every 12 months, whichever is more frequent). ***If the pharmacy does not compound CNSPs that require equipment or devices that must be calibrated for accuracy (such as ones needed for weighing or measuring), the inspector should answer this statement as N/A.***	Yes		6.1
18.6	If a CVE or BSC is used by the pharmacy, it is certified at least every 12 months, according to the manufacturer specifications or regulations of the applicable regulatory jurisdiction. ***If the pharmacy does not have the record or documentation of the certification and maintenance of the CVE/BSC, the inspector should answer this statement as no. If the pharmacy does not have a CVE or BSC, the inspector should answer this statement as N/A.***	Yes		6.1

		Observation	Inspector Notes	USP Reference(s)
19.0	Does the pharmacy compounding CNSPs use APIs?	Yes		6.2
20.0	Does the pharmacy select APIs that comply with the requirements in USP <795> standards? ***Verify by selecting products from the shelf from different suppliers and ask to see the COAs for those products.*** ***If no, go to compliance statements.***	Yes	COAs provided and reviewed.	6.2.1
20.1	APIs comply with criteria in the USP-NF monograph, if one exists. ***If the pharmacy does not compound any CSPs that have an available USP monograph, the inspector should answer this statement as N/A.***	Yes		6.2.1
20.2	All APIs used have a COA that includes the specifications (eg, compendial requirements for quality) and that the test results for the component show the API meets expected quality. ***Inspector note: Per USP, the API should be checked to ensure it is pharmaceutical grade and meets the requirements in the chemical monograph. COA will report an assay has been performed and will include water content (so any corrections/calculations can be performed).***	Yes		6.2.1
20.3	All APIs used are manufactured by an FDA-registered facility. ***Inspector note: This is a Federal Food, Drug, and Cosmetic Act, Section 503A, requirement as well. Inspector should verify the pharmacy looks up the name of the manufacturer listed on the COA to determine if they are registered as an FDA drug establishment https://dps.fda.gov/decrs.***	Yes		6.2.1
21.0	When formulations indicate the inclusion of water, is purified water or better quality (eg, sterile water for irrigation) used in compliance with USP <795> standards?	Yes	Sterile water for irrigation	6.2.1
22.0	What type(s) of water is used for compounding CNSP? ***List the type(s) in the Inspector Notes.***	[redacted]	Sterile water for irrigation	6.2.1

Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
23.0	Do the pharmacy's component receipt processes comply with the requirements in USP <795> standards? ***If no, go to compliance statements.***	Yes		6.2.2
23.1	For non-conventionally manufactured components, the COA is reviewed upon receipt. ***Inspector note: Per USP, "the COA must be reviewed to ensure that the component has met the acceptance criteria in an appropriate USP–NF monograph, if one exists." Pharmacy's review should be documented. Alternatively, the pharmacy can demonstrate how it's been reviewed (for example, there are notes to show a water content calculation back to 100% based on the specific COA). Inspector can verify the COA is retrievable.***	Yes		6.2.2
23.2	The pharmacy documents specific information according to the facility's SOP, including: receipt date, quantity received, supplier name, lot number, expiration date, and the results of any testing performed (whether performed in-house or through a third-party).	Yes		6.2.2, 14
23.3	For all components that lack a vendor expiration date, the pharmacy clearly and indelibly marks on each packaging system received the date the component must no longer be used by the pharmacy. ***Inspector note: Per USP, "Packaging systems of components (i.e., API and added substances) that lack a vendor's expiration date must not be used by the compounding facility after 3 years from the date of receipt. A shorter expiration date must be assigned according to Pharmaceutical Compounding—Sterile Preparations 797 , 9.3.2 Component receipt if the same component container is also used in sterile compounding or if the ingredient is known to be susceptible to degradation."***	Yes		6.2.2
23.4	Any component found to be of unacceptable quality upon receipt or reinspection prior to use is promptly rejected, clearly labeled as rejected, and segregated from active stock to prevent use before appropriate disposal.	Yes		6.2.2
23.5	Any other lots of that (rejected) component from that vendor are examined to determine whether other lots have the same defect.	Yes		6.2.2

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
24.0	Does the pharmacy re-inspect all components before use and handle them in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		6.2.3, 6.2.4
24.1	Compounding personnel visually re-inspect each component, including packaging system (any evidence of container breakage, looseness of cap or closure) and deviation from the expected appearance or texture of the contents (that might have changed during storage).	Yes		6.2.3
24.2	Compounding personnel ascertain before use that components are the correct identity based on labeling, that they have been stored under required conditions, and there is no evidence of deterioration or other aspects of unacceptable quality before use of component.	Yes		6.2.3
24.3	Components where correct identity, strength, purity, and quality cannot be confirmed (eg, containers with damaged or incomplete labeling), are immediately rejected and if not immediately discarded, labeled as rejected and segregated from active stock.	Yes		6.2.3
24.4	Compounding personnel handle all components following facility SOPs, manufacturer's instructions/labeling, and laws/regulations of the applicable regulatory jurisdiction.	Yes		1.1.3, 6.2.4
24.5	All components are handled in a manner that minimizes the risk of contamination, mix-ups, and deterioration.	Yes		6.2.4
25.0	When components are removed from the original container and not used in compounding (eg, excess after weighing), are they discarded and not returned to the original container (to minimize risk of contamination of the original component container)? ***Inspector note: This is a USP recommendation.***	Yes		6.2.4

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
26.0	Does the pharmacy maintain a chemical hazard, spill management, and disposal information program in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		6.2.5
26.1	Pharmacy staff have access to safety data sheets (SDS).	Yes		6.2.5
26.2	Pharmacy staff have documented, annual training for those who might have to clean up a spill.	Yes		6.2.5, 14
26.3	The pharmacy has a readily accessible spill kit in the compounding area.	Yes		6.2.5
26.4	The pharmacy has a process to manage and document any nonhazardous spills and disposal.	Yes		6.2.5
26.5	Waste of any component is disposed of in accordance with laws and regulations of the applicable regulatory jurisdiction.	Yes		1.1.3, 6.2.5
	Master Formulation Records (MFR) and Compounding Records (CR) Inspector should review a minimum of five (5) MFRs and five (5) CRs.			
27.0	Is an MFR created for each unique formulation of a CNSP in compliance with USP <795> standards? ***Inspector note: Per USP, an MFR is a detailed record of procedures that describes how the CNSP is to be prepared.*** ***If no, go to compliance statements.***	Yes		7.1
27.1	An MFR is created for each unique formulation.	Yes		7.1 Box2
27.2	Any changes or alterations to the MFR are approved and documented.	Yes		7.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
27.3	Does the designated person(s) or designee evaluate CNSP's characteristics when considering the assigned BUD for an MFR? ***Inspector note: Per USP, "When establishing a BUD for a CNSP, compounders must consider parameters that may affect quality, including but not limited to the following:*** ***- Chemical and physical stability properties of the API and any added substances in the preparation (e.g., if the API and added substances in the preparation are known to rapidly degrade over time and/or under certain storage conditions, reduce the strength of the preparation, or produce harmful impurities)*** ***- Compatibility of the container closure system with the finished preparation (e.g., leachables, interactions, adsorption, and storage conditions)*** ***- Degradation of the container closure system, which can lead to a reduction in integrity of the CNSP*** ***- Potential for microbial proliferation in the CNSP (and)*** ***- Significant deviations from essential compounding steps and procedures; changes to essential compounding steps may have an impact on the stability of the formulation."***	Yes		7.1, 10.2 Table 4
28.0	Does the pharmacy's MFRs contain all requirements in compliance with USP <795> standards? ***If no, go to compliance statements. Additionally, collect a copy of the MFR and include as an attachment.***	Yes		7.1
28.1	MFR includes the name, strength or activity, and dosage form of the CNSP.	Yes		7.1
28.2	MFR identifies the identities and amounts of all components and, if applicable, relevant characteristics of components (eg, particle size, salt form, purity grade, solubility).	Yes		7.1
28.3	MFR includes the type of container–closure system(s).	Yes		7.1

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
28.4	MFR has complete instructions for preparing the CNSP, including equipment, supplies, and a description of the compounding steps. ***Inspector note: Per USP, the MFR will also include, "Other information needed to describe the compounding process and ensure repeatability (e.g., adjusting pH, temperature)." MFRs will include the detailed instructions necessary for an experienced compounder. Some examples of other details to ensure repeatability include, but are not limited to: speed duration, settings on equipment, and specific order of mixing (if applicable).*** ***Inspector should review several MFRs for completeness of instructions.***	Yes	Reviewed	7.1
28.5	MFR has a physical description of the final CNSP.	Yes		7.1
28.6	MFR includes the assigned beyond-use date (BUD) and storage requirements.	Yes		7.1
28.7	MFR contains the reference source to support the assigned BUD.	Yes		7.1
28.8	Labeling requirements (eg, shake well) are described on the MFR.	Yes		7.1
28.9	If applicable, the MFR contains the calculations to determine and verify quantities and/or concentrations of components and strength or activity of APIs.	Yes		7.1
28.10	An MFR has QC procedures (eg, pH testing, visual inspection) and expected results.	Yes		7.1
29.0	Does the pharmacy complete a Compounding Record (CR) for all CNSPs in compliance with USP <795> standards? ***If no, go to compliance statements. Additionally, collect a copy of the MFR and the CR (no PHI or PII is to be collected).***	Yes		7.2, 14
29.1	A CR is completed for each CNSP prepared.	Yes		7.2, 14
29.2	The CR includes the name, strength or activity, and dosage form of the CNSP.	Yes		7.2, 14

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
29.3	The CR includes the date (or date and time) the CNSP was prepared.	Yes		7.2, 14
29.4	The CR includes the assigned internal identification number (eg, prescription, order, or lot number).	Yes		7.2, 14
29.5	The CR has a method to identify the individuals involved in the compounding process of the CNSP.	Yes		7.2, 14
29.6	The CR has a method to identify the individual who completed the review and verified the final CNSP.	Yes		7.2, 14
29.7	The CR includes: name, vendor or manufacturer, lot number, and expiration date of each component.	Yes		7.2, 14
29.8	The CR includes the weight or measurement of each component.	Yes		7.2, 14
29.9	The CR identifies the total quantity compounded.	Yes		7.2, 14
29.10	The CR lists the assigned BUD and storage requirements.	Yes		7.2, 14
29.11	If applicable, the CR contains the calculations to determine and verify quantities and/or concentrations of components and strength or activity of API.	Yes		7.2, 14
29.12	The CR has a physical description of the final CNSP.	Yes		7.2, 14
29.13	The CR includes the results of quality control procedures (eg, pH testing, visual inspection).	Yes		7.2, 14
29.14	The CR contains a MFR reference for the CNSP.	Yes		7.2, 14
29.15	Each CR is reviewed for completeness before the CNSP is released.	Yes		7.2, 8
29.16	The CR shows traceability of all components in the case of a recall or known quality issue.	Yes		7.2, 12.1, 14

National Association of Boards of Pharmacy®
Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
30.0	Are there procedures for in-process checks performed by a pharmacist? ***Inspector note: In-process checks are safety steps for complex, multi-step compounding processes. These checks indicate that appropriate procedures for measuring/mixing are followed for each step, including pharmacist verification of steps performed by non-pharmacists and visual inspection of preparation. Inspector should describe their observations in the Inspector Notes.***	Yes	The technician showed the pharmacist through the window the measuring of an API before the compound was finished. An iPad is also used to take pictures for the pharmacist to verify.	2, 7.2, 8
	Labeling			
31.0	Are the pharmacy's labels for CNSPs in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		9
31.1	Information on the label is prominently and legibly displayed. ***Inspector note: Per USP, labeling includes other accompanying materials along with the CSP, which is defined as "All labels and other written, printed, or graphic matter on the immediate container or on or inside any packaging system or wrapper in which the article is enclosed, except for any outer shipping container."***	Yes		9
31.2	The labeling meets any state or federal regulatory requirements.	Yes		1.1.3, 9
31.3	The label on the immediate container includes an assigned internal identification number (eg, barcode, prescription, order, or lot number).	Yes		9
31.4	The label on the immediate container includes the active ingredients and their amount(s), activity(ies), or concentration(s).	Yes		9
31.5	The label on the immediate container includes the storage conditions, if other than controlled room temperature.	Yes		9
31.6	The label on the immediate container includes the BUD. ***If no, please describe whether the pharmacy instead used the term "expiration date" or similar language or if this information was not included on the label.***	Yes		9

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
31.7	The label on the immediate container includes the dosage form.	Yes		9
31.8	The label on the immediate container includes the total amount or volume, if it is not obvious from the container.	Yes		9
32.0	Does the labeling on the dispensed CNSP include the route of administration? ***Inspector note: This is a USP recommendation.***	Yes		9
33.0	Does the labeling contain information identifying the CNSP as a compounded preparation? ***Inspector note: Per USP, this is a recommendation.***	Yes		9 USP <7>
34.0	Does the labeling on the dispensed CNSP display any applicable special handling instructions or warning statements? ***Inspector note: This is a USP recommendation.***	Yes		9
35.0	Does the labeling on the dispensed CNSP display the name of the compounding facility and contact information if the CNSP was to be sent outside of the facility or health care system? ***Inspector note: This is a USP recommendation.*** ***If the pharmacy only compounds CNSPs for patient use onsite (eg, a health care facility), inspector should answer this question as N/A.***	Yes		9
	Establishing Beyond Use Dating (BUDs)			
36.0	Is each CNSP assigned and labeled with a BUD in compliance with USP <795> standards? ***Inspector note: Per USP, the BUD is defined as, "The date, or hour and date, after which a CNSP must not be used, stored, or transported. The date is determined from the date or time the preparation is compounded." This is not the same term as "expiration date."*** ***If no, go to compliance statements.***	Yes		10 USP <7>
36.1	CNSP label has a BUD that specifies the date, or the hour and date, beyond which the preparation cannot be used and must be discarded.	Yes		10.1
36.2	CNSP labels do not list an "expiration date" or equivalent language.	Yes		10.1

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
36.3	BUDs are assigned from the date (and time) of preparation.	Yes		10.1
36.4	BUDs are assigned based on dispensing in tight, light resistant containers/overpacks. ***Inspector note: Per USP, the Table 4 maximum limits for BUD are, "based on the ability of the CNSP to maintain chemical and physical stability and to suppress microbial growth. These BUDs represent the limit for CNSPs that are packaged in tight, light-resistant containers unless conditions in 10.4 CNSPs Requiring Shorter BUDs or 10.5 Extending BUDs for CNSPs apply."***	Yes		10.3
36.5	The BUD assigned to the CNSP does not exceed the shortest remaining expiration date of any of the commercially available starting components.	Yes		10.4
37.0	Does the pharmacy ensure the assigned BUD does not exceed the shortest BUD of any individual compounded components? ***Inspector note: Per USP, "For CNSPs prepared from one or more compounded components, the BUD should generally not exceed the shortest BUD of any of the individual compounded components. However, there may be acceptable instances when the BUD of the final CNSP exceeds the BUD assigned to compounded components (e.g., pH-altering solutions). If the assigned BUD of the final CNSP exceeds the BUD of the compounded components, the physical, chemical, and microbiological quality of the final CNSP must not be negatively impacted." Another example of these "acceptable instances" (similar to pH-altering components mentioned above) inspectors may see are stock solutions (and other formulas within a formula) such as methocel 1%.*** ***If no, inspector should describe the observations, including the name of the component whose BUD was shorter than the assigned BUD of the final CSP.***	Yes		10.4
38.0	Does the designated person(s) evaluate a CNSP formulation to establish the maximum BUD? ***If no, who establishes the maximum BUD for a MFR?***	Yes		7.1, 10.2, 10.3
39.0	Does the pharmacy compound CNSPs with a USP monograph?	Yes		10.5

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
40.0	Does the pharmacy compound CNSPs following the USP monograph precisely? ***If no, go to compliance statements.***	Yes		10.5
40.1	Pharmacy staff have access to the USP monograph for reference.	Yes		10.5
40.2	CNSPs are prepared in accordance with the USP monographs. ***If no, inspector to collect a copy of the compounding record, label; and describe what specific steps of the monograph were not followed.***	Yes		10.5
40.3	Components used by the compounder match those listed in the monograph. ***If no, describe the source of the component in monograph and the source that the pharmacy used.***	Yes		10.5
40.4	The maximum BUD specified in the USP monograph is not exceeded. ***If no, identify the drug, monograph-stated BUD, and the BUD used by the pharmacy.***	Yes		10.5
41.0	Does the pharmacy compound CNSPs that are not available from a USP monograph?	Yes		10.4
42.0	Does the pharmacy adhere to the BUD (maximum) limits established in Table 4 for CNSPs in compliance with USP <795> standards? ***Inspector note: This question is for the CNSPs compounded that are <u>not</u> following a USP monograph or those CNSPs where extending BUD requirements were applied (where pharmacy has completed or has access to CNSP-Specific Stability Information). Per USP, the pharmacy is not required to measure water activity (A_w) for a CNSP.*** ***If no, go to compliance statements.*** ***If <u>all</u> CNSPs compounded at the pharmacy are following a USP monograph or the pharmacy is following a stability study that used a stability-indicating assay analytical method for the API, CNSP formulation, and material of composition of the container closure system, then the inspector should answer this question as N/A.***	N/A		10.4

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
42.4	**Nonaqueous Dosage Forms:** The nonaqueous dosage form CNSP is labeled with a BUD that does not exceed 180 days with controlled room temperature or refrigerated storage temperature. ***Inspector note: Per USP <795>, Nonaqueous (Solid) dosage forms are ones that have a A_w < 0.6. Some examples include capsules, tablets, granules, powders, nonaqueous topicals, suppositories, and troches or lozenges.*** ***If pharmacy does not compound other nonaqueous solid dosage forms, inspector should answer statement as N/A.*** ***If no, describe your observations including but not limited to: the name of the compounded preparation, the labeled BUD and the storage environment. Additionally, collect a copy of the master formulation record, the compounding record, and a copy of a label without PHI.***	Yes		10.4 Table 4 USP <659>
43.0	Does the pharmacy label any CNSPs with BUDs that extend beyond the maximum limits in Table 4 USP <795>?	No		10.5 Table 4
44.0	Does the pharmacy follow the requirements for labeling a CNSP with a BUD that exceeds Table 4 in compliance with USP <795> standards? ***If no, go to compliance statements.***	N/A		10.5
44.1	The labeled BUD for an aqueous dosage form does not exceed 180 days. ***If no, collect a copy of the MFR, the CR, and a copy of a label without PHI.***	N/A		10.5
44.2	The labeled BUD for a nonaqueous dosage form does not exceed 180 days. ***If no, collect a copy of the MFR, the CR, and a copy of a label without PHI.***	N/A		10.5
44.3	Pharmacy is following the results of their own stability study. ***If the pharmacy only follows cited stability studies (does not conduct their own stability studies) for extending BUDs, answer this question as N/A.*** ***If pharmacy is following a bracketed study, inspector may mark this statement as yes if concentrations of CNSPs are at or within the concentrations specified within the study.*** ***If pharmacy is following a bracketed study and is using a concentration outside the study, answer this question as a no and describe observations.***	N/A		10.5

Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
44.4	The pharmacy has a copy of the cited stability study, which used a stability-indicating analytical method, for extending BUDs. ***Per USP, any stability study that meets the requirements of a stability-indicating assay method can be used (whether it is published or unpublished, such as a study provided by a chemical supplier) to extend BUDs up to 180 days for a CNSP.*** ***If pharmacy only conducts their own stability studies (does not use published or unpublished study performed by another entity) for extending BUDs, inspector should answer this question as N/A.*** ***If no, please describe the inspector observations.***	N/A		10.5
44.5	The cited stability study (which uses a stability-indicating analytical method for extending BUDs) describes the API(s), CNSP formulation, and material composition of the container closure used. ***If pharmacy only conducts their own stability studies (does not use published or unpublished study performed by another entity) for extending BUDs, inspector should answer this question as N/A.*** ***If no, please describe the inspector observations.***	N/A		10.5
44.6	If the cited stability study (which uses a stability-indicating analytical method for extending BUDs) is bracketed, the pharmacy's CNSP formulation is at or within the low and high concentration of each active ingredient within the stability study. ***If no, describe the concentrations cited in the stability study and the concentration of the CNSP compounded by the pharmacy.*** ***If pharmacy only conducts their own stability studies (does not use published or unpublished study performed by another entity) for extending BUDs, inspector should answer this question as N/A.***	N/A		10.5

Verified Pharmacy Program Inspection Form

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
44.7	Aqueous CNSPs whose labeled BUDs are extended beyond Table 4, have: - been tested for antimicrobial effectiveness at least once for each formulation in the type of (with the same material composition of the) container closure system that will be used; - received study results from an FDA-registered facility (for the same CNSP formulation using the same material composition of the container closure system); or - a study published from peer-reviewed literature (for the same CNSP formulation using the same material composition of the container closure system). ***Inspector note: Pharmacy may rely on a bracketed study from the above options as long as the bracketed study information includes the low and high concentration of each active ingredient in the formulation. Per USP, this is "to establish preservative effectiveness across various strengths of the same formulation (e.g., bracketing). The concentration of all other ingredients (including preservatives) must fall within the bracketed range.***	N/A	BUD are not extended.	10.5
	Quality Assurance (QA), Quality Control (QC), and Quality Management (QM) Inspector to review at least one complaint, one adverse event, and one recall (if applicable).			
45.0	Does the pharmacy have a QA/QC program to ensure that CNSPs are prepared per the requirements in USP <795> standards and any applicable regulatory requirements? ***If no, go to compliance statements.***	Yes		1.1.3, 12
45.1	The pharmacy has a formal QA/QC program with documented activities. ***Inspector note: Per USP, "A facility's QA and QC programs must be formally established and documented in the facility's SOPs that ensure that all aspects of the preparation of CNSPs are conducted in accordance with the requirements in this chapter (<795>) and the laws and regulations of the applicable regulatory jurisdiction."***	Yes		12
45.2	The QA/QC programs address adherence to procedures.	Yes		12
45.3	The QA/QC programs address prevention and detection of errors and other quality problems.	Yes		12

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
45.4	The QA/QC programs address evaluation of complaints and adverse events. ***Review at least one complaint and one adverse event. If there are no complaints or adverse events, review the process that the pharmacy would follow in the event of a complaint or adverse event.***	Yes	There were no complaints so reviewed the process.	12
45.5	The QA/QC programs address appropriate investigations and corrective actions.	Yes		12
46.0	Has the pharmacy received any complaints related to CNSPs within the past year?	No		12
47.0	Does the pharmacy follow complaint handling requirements in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		12.2
47.1	The pharmacy has a complete written or electronic record of each complaint made. ***Inspector note: Per USP, "The record must contain the name of the complainant or other unique identifier, the date the complaint was received, the nature of the complaint, and the response to the complaint. In addition, to the extent that the information is known, the following should be recorded: the name and strength of the CNSP and the assigned internal identification number (e.g., prescription, order, or lot number). The record must also include the findings of any investigation and any follow-up. Records of complaints must be easily retrievable for review and evaluation for possible trends and must be retained."***	Yes		12.2
47.2	Complaints are reviewed in accordance with SOPs by the designated person for the QA program.	Yes		12.2
47.3	Complaints are reviewed to determine whether it indicates a potential quality problem with the CNSP.	Yes		12.2
47.4	Complaints are fully investigated.	Yes		12.2
47.5	Complaint investigations consider whether the quality problem extends to other CNSPs.	Yes		12.2

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
47.6	Corrective action, if necessary, is implemented for all potentially affected CNSPs. ***Inspector note: Per USP, the pharmacy is to, "Consider whether to initiate a recall of potentially affected CNSPs and whether to cease nonsterile compounding processes until all underlying problems have been identified and corrected."***	Yes		12, 14
47.7	A CNSP that is returned in connection with a complaint is quarantined until it is destroyed after the completion of the investigation and in accordance with the laws and regulations of the applicable regulatory jurisdiction.	Yes		1.1.3, 12.2
48.0	Has the pharmacy initiated any recalls of CNSPs within the past two years? ***Inspector note: Per USP <795> requires all records to be readily retrievable for two years, including recalls; However, the state/jurisdictional regulator may require records to be kept for a longer period of time.*** ***Review most recent recall and describe in the Inspector Notes.*** ***If the pharmacy has not had any recalls within the past two years, inspector should answer the question as No.***	No		12.1, 14
49.0	Does the pharmacy follow recall and adverse event procedures for CNSPs in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		12.1, 12.2, 12.3
49.1	The pharmacy has procedures to determine when recalls must be initiated.	Yes		12.1
49.2	The pharmacy documents the implementation of the recall.	Yes		12.1
49.3	Pharmacy reports recalled CNSPs to the appropriate regulatory bodies (as required by laws and regulations of the applicable regulatory jurisdiction).	Yes		1.1.3, 12.1
49.4	Investigations into an adverse event that reveals a quality problem with a CNSP that is likely to affect other patients are reported to both patients and their prescribers.	Yes		12.3
50.0	Does the pharmacy procedures include a step to immediately notify the prescriber of a failure of specifications with potential to cause harm (eg, strength, purity, or other quality attributes)? ***Inspector note: This is a USP recommendation.***	Yes		12.1

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	CNSP Packaging			
51.0	Does the pharmacy's packaging processes and materials meet the requirements in USP <795>? ***If no, go to compliance statements.***	Yes		13.1
51.1	The packaging materials protect CNSPs from damage, leakage, contamination, and degradation.	Yes		13.1
51.2	The packaging materials used protects personnel from exposure (from the packaged CNSP).	Yes		13.1
52.0	The packaging materials selected by the pharmacy maintain the physical and chemical integrity and stability needed for CNSPs (eg, protect from light).	Yes		13.1
	Compounding Personnel Observations - *Inspector must observe personnel performing compounding and related activities. This section will require the inspector to observe the staff while performing compounding and related activities. It is acceptable for pharmacy staff to perform mock compounding activities (with two creams or other drugs) as long as all observations can be viewed.*			
53.0	**Personal Preparation Observation:** Before entering the compounding area, do personnel remove any items that are not easily cleanable or are not necessary for compounding in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		
53.1	Personnel removed all outer garments (eg, hats, scarves, bandanas, vests, coats, and jackets).	Yes		3.1
53.2	Personnel removed all items that are not easily cleanable and that might interfere with garbing.	Yes		3.1
53.3	Personnel removed all hand, wrist, and other exposed jewelry, including piercings, that could interfere with the effectiveness of garbing and hand hygiene (eg, watches, rings that may tear gloves).	Yes		3.1
53.4	Personnel removed earbuds or headphones.	Yes		3.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
53.5	Any accommodations permitted by the designated person(s) should be documented. ***Inspector note: Per USP <795>, accommodations may be permitted as long as the quality of the CSP and environment will not be affected.***	Yes		3.1
54.0	**Hand Hygiene Observation:** Were personnel who enter the compounding area to compound observed performing the appropriate hand washing procedures in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		3.2, Box 1
54.1	All personnel who enter the compounding area to compound performed hand hygiene.	Yes		3.2 Box 1
54.2	Personnel wash hands with soap and water for at least 30 seconds.	Yes		3.2
54.3	Personnel dry their hands completely with disposable towels or wipers.	Yes		3.2
54.4	Personnel do not solely rely on the use of alcohol hand sanitizers.	Yes		3.2
55.0	***Garbing Observation:*** Were compounding personnel observed following the appropriate garbing procedures in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		3.3 Box 1
55.1	All personnel entering the compounding area are fully garbed (with the required garb as determined by the facility SOPs).	Yes		3.3 Box 1
55.2	All personnel who perform compounding activities don gloves. ***Inspector note: Per USP, "Gloves must be worn for all compounding activities."***	Yes		3.2, 3.3 Box 1
55.3	Gloves are inspected periodically for holes, punctures, or tears and replaced immediately if a defect is detected.	Yes		3.3 Box 1
56.0	Are gloves wiped or replaced before beginning compounding a CNSP with a different component or when other objects were touched (eg, pens, keyboards) to minimize risk of cross contamination with other CNSPs? ***Inspector note: This is a USP recommendation.***	Yes		3.3

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
57.0	List the name(s) of the CNSPs observed by the inspector as part of live compounding demonstration.		Testosterone 50mg/gm in Cream	
58.0	**Compounding Observation:** Are compounding personnel using appropriate nonsterile compounding techniques for CNSPs in compliance with USP <795> standards? ***If no, go to compliance statements.***	Yes		2 Box 3
58.1	The compounding personnel enter the nonsterile compounding area in accordance with the SOPs.	Yes		3.1, 4.1
58.2	The compounding personnel started with a clean compounding area for CNSPs.	Yes		4.1, 4.3, 5 Table 1
58.3	The compounding personnel selected the correct MFR for the CNSP to be prepared.	Yes		7, 7.1 Box 2
58.4	The compounding personnel performed hand hygiene. ***Inspector note: Per USP <795>, Box 1, personnel are to: wash hands with soap and water for at least 30 seconds, dry hands completely with disposable towels or wipers, and then don gloves.***	Yes		3.2 Box 1
58.5	The compounding personnel are appropriately garbed for the type of CNSP prepared.	Yes		3.3
58.6	The compounding personnel obtained the proper ingredients (APIs and/or components). ***Inspector note: All ingredients must be within date and match what is listed in the MFR. If the ingredient is an API, the COA must have already been reviewed and approved for use.***	Yes		6.2 (6.2.1 - 6.2.5)
58.7	The compounding personnel gathered all necessary materials, equipment, and supplies necessary and/or specified in the MFR and is in good working order prior to use for the CNSP. ***Inspector note: All items must be clean prior to use. If equipment requires calibration and/or certification, compounder must ensure the equipment or device is within proper specifications (eg, tare scales and/or balances).***	Yes		6.1 Table 2

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
58.8	The compounding personnel have knowledge of and access to any SDS.	Yes		6.2
58.9	The compounding personnel only compound one CNSP at a time (to proactively prevent mix-ups, errors, and cross contamination).	Yes		1.1.3
58.10	The compounding personnel compound the CNSP according to the MFR. ***If no, inspector needs to describe in detail their observations in the Inspector Notes and collect a copy of the MFR and CR (no PHI or PII to be collected).***	Yes		7.1, 7.2 Box 2
58.11	The compounding personnel document any required steps listed in the MFR on the CR. ***Inspector note: This would include any weights, volume, and any in-process checks needed.***	Yes		7.2, 14 Box 3
58.12	Documentation in the CR is legible. ***If no, collect copy of record that is illegible. Redact any PHI on record.***	Yes		14
58.13	The compounding personnel verify the correct BUD in accordance with the MFR requirements in USP <795>.	Yes		10 Table 3, Table 4
58.14	The compounding personnel performed any quality control steps specified in the MFR. ***Inspector note: Examples of this include, but are not limited to: testing of pH for a suspension, weighing of capsules, and visual inspection against product description specifications.*** ***If no, describe observations in Inspector Notes.***	Yes		7.2, 8, 8.1, 12 Box 3
58.15	The compounding personnel placed the CNSP into the proper container closure system.	Yes		8.1 Box 2
58.16	The compounding personnel labeled the CNSP. ***Inspector note: Storage requirements must be included on the label if refrigerated or frozen (so patient can identify the storage temperature requirements).***	Yes		9

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
58.17	The compounding personnel completed any documentation on the CR. ***If no, describe observations of what was missing or omitted in Inspector Notes.***	Yes		7.2, 8, 14 Box 3
58.18	The compounding personnel cleaned and sanitized the compounding area before the next CNSP (with differing ingredients) is prepared.	Yes		5
59.0	**Final CNSP check observation:** Does the visual inspection of the CNSP by the pharmacist confirm all USP <795> requirements? ***Observe a pharmacist check several CNSP prescriptions. List the name of CNSPs release inspection observed in the Inspector Notes.*** ***If no, go to compliance statements.***	Yes	Testosterone 50mg/gm in Cream; Methimazole 5mg/0.1ml cream	8, 8.1, 9
59.1	CNSP was visually inspected to determine the physical appearance of the CNSP is as expected (eg, color, texture, physical uniformity), including any special characteristics listed in the MFR (eg, emulsions must be checked for phase separation).	Yes		8, 8.1
59.2	Visual inspection included checking for container closure integrity (eg, leakage, cracks, improper seals).	Yes		8, 8.1
59.3	CNSP label was verified against the prescription or medication order.	Yes		8, 8.1, 9
59.4	CNSP label was verified against the MFR.	Yes		8, 8.1, 9
59.5	CNSP label was verified against the CR.	Yes		8, 8.1, 9
59.6	If a CNSP will not be released or dispensed on the day the preparation was made, a visual inspection was conducted immediately before it is released or dispensed to make sure the CNSP did not develop any defects during storage.	Yes		8, 8.1
59.7	All checks and inspection that are performed are properly documented.	Yes		8.1, 14

Nonsterile Compounding Inspection for USP <795>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
59.8	CNSP that do not meet requirements, are promptly rejected, clearly labeled as rejected, and segregated from active stock to prevent use before disposal	Yes		8.1
60.0	Inspect several different finished compounded nonsterile preparations. Are all the finished compounded preparations free from any evidence of signs of contamination? ***Inspector note: If found, request the compounded preparation to be quarantined and notify NABP immediately.*** ***Additionally, list the name(s) of the compounded preparation(s) observed; description of type of contamination suspected (eg, particulates, dirt/debris/(suspected) mold within container closure); number of preparations affected (eg, two of the five containers on the shelf); lot or batch information; BUD assigned; and collect photographs, copy of MFR, and CR.***	Yes		12
61.0	**Cleaning and Disinfection Observation:** Does the pharmacy perform cleaning and sanitizing activities in the compounding area in compliance with USP <795> standards? ***Document observations while pharmacy staff are performing live compounding activities in Inspector Notes.*** ***If no, go to compliance statements.***	Yes		5
61.1	Pharmacy staff starts with a clean and sanitized work surface prior to compounding a CNSP.	Yes		5 Table 1
61.2	Pharmacy staff perform cleaning and sanitizing between compounding CNSPs with different components. ***Inspector note: Per USP, "If cleaning and sanitizing are performed as separate steps, cleaning must be performed first."***	Yes		5 Table 1
61.3	Pharmacy staff ensure equipment and devices used in compounding activities are clean and sanitized after use (to prevent cross contamination of the next preparation).	Yes		6.1 Table 2
61.4	Pharmacy staff perform cleaning and sanitizing on work surfaces when visibly soiled, after spills, and/or when surface contamination is known or suspected.	Yes		5 Table 1

Nonsterile <795> Employee File Records Review

Select the PIC, designated person, a staff pharmacist that checks compounded preparations, and two to three compounding pharmacy technicians. Do not record the employee name, list only their title or position.
From the drop-down List:
*Mark as "Yes" if the document is present in the records and the competency evaluation was conducted in compliance with USP <795> requirements.
*Mark as "No" if the document is present in the records but is not in compliance with USP <795> requirements.
*Mark as "Missing" if any part of the record is missing and explain in Notes column.
*Mark as "N/A" if the training does not apply (eg, long-term employee may not have initial training available). Document further in the Notes column.

		Employee Records #1	Employee Records #2	Employee Records #3	Employee Records #4	Employee Records #5	
	Employee Title	PIC	Technician				Notes
1.0	The training program provides initial training, evaluation, and documentation on the core competencies listed below:						
1.1	Compounding personnel are trained on facility SOPs.	Yes	Yes				
1.2	Compounding personnel are trained on USP <795> standards.	Yes	Yes				
1.3	The training record for hand hygiene is complete.	Yes	Yes				
1.4	The training record for garbing is complete.	Yes	Yes				
1.5	The training record for cleaning and sanitizing is complete.	Yes	Yes				
1.6	The training record for handling and transporting components and CNSPs is complete.	Yes	Yes				
1.7	The training record for measuring and mixing is complete.	Yes	Yes				
1.8	The training record for proper use of equipment is complete.	Yes	Yes				
1.9	The training record for documentation of compounding processes (eg, Master Formulation Records or Compounding Records) is complete.	Yes	Yes				
1.10	The training record for interpreting a Certification of Analysis (COA) is complete.	Yes	Yes				
1.11	The training record for how to read/interpret a Safety Data Sheet (SDS) is complete.	Yes	Yes				
1.12	The training record for spill management is complete.	Yes	Yes

	Employee Title	PIC	Technician				Notes
2.0	The annual competency assessment was evaluated and documented on the following topics:						New pharmacy--only open since 3/6/2025
2.1	Compounding personnel are re-trained on facility SOPs.	N/A	N/A				
2.2	Compounding personnel are re-trained on USP <795> standards.	N/A	N/A				
2.3	The annual competency assessment for hand hygiene is complete.	N/A	N/A				
2.4	The annual competency assessment for garbing is complete.	N/A	N/A				
2.5	The annual competency assessment for cleaning and sanitizing is complete.	N/A	N/A				
2.6	The annual competency assessment for handling and transporting components and CNSPs is complete.	N/A	N/A				
2.7	The annual competency assessment for measuring and mixing is complete.	N/A	N/A				
2.8	The annual competency assessment for proper use of equipment is complete.	N/A	N/A				
2.9	The annual competency assessment for documentation of compounding processes (eg, Master Formulation Records or Compounding Records) is complete.	N/A	N/A				
2.10	The annual competency assessment for interpreting a COA is complete.	N/A	N/A				
2.11	The annual competency assessment for how to read/interpret a SDS is complete.	N/A	N/A				
2.12	The annual competency assessment for spill management is complete.	N/A	N/A				
3.0	The designated person(s) has documented a (periodic) evaluation of their direct observations for compounding activities and documented any deficiencies in the record. *Inspector note: if there are not observations documented, the inspector should answer this question as N/A.* *Per USP, "the designated person(s) should monitor and observe compounding activities and must take immediate corrective action if deficient practices are observed. Facility SOPs must describe procedures for monitoring and observing compounding activities and personnel."*	Yes	Yes

Glossary & References	USP <795>
Active Pharmaceutical Ingredient (API)	Any substance or mixture of substances intended to be used in the compounding of a preparation, thereby becoming the active ingredient in that preparation and furnishing pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease in humans or animals or affecting the structure and function of the body. Also referred to as a bulk drug substance. A conventionally manufactured drug product is not an API but is typically manufactured from an API(s).
Added Substance	An ingredient that is necessary to compound a preparation but is not intended or expected to cause a pharmacologic response if administered alone in the amount or concentration contained in a single dose of the compounded preparation. The term is used synonymously with inactive ingredient, excipient, and pharmaceutical ingredient.
Administration	The preparation of a nonsterile pharmacologic or other therapeutic agent for ingesting, inserting, applying, or otherwise providing a nonsterile medication in its final form to a single patient. This includes crushing a tablet(s) or opening a capsule(s) to mix with food or liquids to facilitate patient dosing.
Alcohol-based hand rub	An alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands of health care personnel to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients, excipients, and humectants.
Assigned trainer	One or more individuals assigned by the designated person(s) to be responsible and accountable for directly providing the training, observation, and/or evaluation of personnel for the preparation of CNSPs.
Beyond-use date (BUD)	The date, or hour and date, after which a CNSP must not be used, stored, or transported. The date is determined from the date or time the preparation is compounded.
Biological Safety Cabinet (BSC)	A ventilated cabinet that may be used for compounding. These cabinets are divided into three general classes (Class I, Class II, and Class III). Class II BSCs are further divided into types (Type A1, Type A2, Type B1, Type B2, and Type C1).
Bulk drug substance	See the entry for Active Pharmaceutical Ingredient.
Certificate of analysis (COA)	A report from the supplier of a component, container, or closure that accompanies the supplier's material and contains the specifications and results of all analyses and a description of the material.
Cleaning	The process of removing substances (eg, organic and inorganic material) from objects and surfaces, normally accomplished by manually or mechanically using water with detergents or enzymatic products.
Cleaning agent	An agent, usually containing a surfactant, used for the removal of substances (eg, dirt, debris, microbes, and residual drugs or chemicals) from surfaces.
Closed-system processing device	A device designed to reduce the potential exposure to personnel or contamination of the facility or CNSPs. Examples include CVEs, BSCs, or single-use containment glove bags.
Component	Any ingredient used in the compounding of a preparation, including any API, added substance, or conventionally manufactured product.
Compounded nonsterile preparation (CNSP)	A preparation not intended to be sterile that is created by combining, admixing, diluting, pooling, reconstituting other than as provided in the manufacturer's labeling, or otherwise altering a drug product or bulk drug substance.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. Glossary & References	USP <795>
Compounding	The process of combining, admixing, diluting, pooling, reconstituting other than as provided in the manufacturer's labeling, or otherwise altering a drug product or bulk drug substance to create a nonsterile preparation.
Compounding area	An area that is specifically designated for nonsterile compounding.
Compounding personnel	Personnel trained to compound or oversee compounding of preparations.
Compounding record (CR)	Documents the compounding of each CNSP.
Container closure system	Packaging system components that together contain and protect the dosage form. This includes primary packaging system components and secondary packaging system components if the latter are intended to provide additional protection.
Containment glove bag	A single-use disposable glove bag that is capable of containing airborne chemical particles.
Containment ventilated enclosure (CVE)	A full or partial enclosure that uses ventilation principles to capture, contain, and remove airborne contaminants through high- efficiency particulate air (HEPA) filtration and to prevent their release into the work environment.
Conventionally manufactured product	A pharmaceutical dosage form, usually the subject of an application approved by the applicable national regulatory agency, that is manufactured under current good manufacturing practice conditions.
Designated person(s)	One or more individuals assigned to be responsible and accountable for the performance and operation of the facility and personnel as related to the preparation of CNSPs.
FDA	US Food and Drug Administration
Formulation	The specific qualitative and quantitative composition of the final CNSP.
Hazardous Drug (HD)	Any drug identified by at least one of the following criteria: carcinogenicity, teratogenicity or developmental toxicity; reproductive toxicity in humans; organ toxicity at low dose in humans or animals; genotoxicity or new drugs that mimic existing HDs in structure or toxicity. See <800>.
Label	The part of the labeling on the immediate container.
Labeling	All labels and other written, printed, or graphic matter on the immediate container or on or inside any packaging system or wrapper in which the article is enclosed, except for any outer shipping container.
Master formulation record (MFR)	A detailed record of procedures that describes how the CNSP is to be prepared.
Monograph	A quality documentary standard within USP–NF that articulates the quality expectations for a medicine including for its identity, strength, purity, and performance. It also describes the tests to validate that a medicine and its ingredients meet these criteria.
Oversight	The review, monitoring, and supervision of actions taken by personnel; bearing responsibility for those actions; and being available if and when needed for consultation, even if not physically present.
Preservative	A substance added to inhibit microbial growth.
Purified water	The minimal quality of source water for the production of Purified Water is drinking water whose attributes are prescribed by the US Environmental Protection Agency (EPA), the European Union, Japan, or the World Health Organization (WHO). This source water may be purified using unit operations that include deionization, distillation, ion exchange, reverse osmosis, filtration, or other suitable purification procedures. (See <1231>, 3.1.1 Purified Water.)

Glossary & References	USP <795>
Quality Assurance (QA)	A system of procedures, activities, and oversight that ensures that the compounding process consistently meets quality standards.
Quality Control (QC)	The sampling, testing, and documentation of results that, taken together, ensure that specifications have been met for the CNSP.
Reconstitution	The process of adding a diluent to a conventionally manufactured product to prepare a solution or suspension.
Release inspection and testing	Visual inspection and testing performed to ensure that a preparation meets appropriate quality characteristics.
Sanitizing agent	An agent for reducing, on inanimate surfaces, the number of microorganisms (eg, 70% isopropyl alcohol).
SDS	Safety data sheet.
SOP	Standard operating procedure.
Specification	The tests, analytical methods, and acceptance criteria to which any components, CNSP, container closure system, equipment, or other material used in the compounding of CNSPs must conform to be considered acceptable for its intended use.
Stability	The extent to which a product or preparation retains physical and chemical properties and characteristics within specified limits throughout its expiration or BUD.
Verify	To confirm that a method, process, system, or equipment will perform as expected under the conditions of actual use.
Water activity (a_w)	A measure of the fraction of total water that is unbound and freely available to participate in chemical, biochemical, or physicochemical reactions or provide an environment that can support microbial growth. Note that a_w is not water content.

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Standard Operating Procedures (SOPs) for Compounded Sterile Preparations (CSPs)		**Please note NABP did not review each SOP for alignment on USP <797>. The SOP(s) described below is/are a reflection of any self-assessment completed by the pharmacy and/or shared with the inspector during the onsite inspection.**	
1.0	Does the pharmacy have a designated person(s) who meets the requirements in compliance with USP <797> standards? ***Inspector note: Per USP, "The compounding facility must designate one or more individuals (ie, the designated person(s)) to be responsible and accountable for the performance and operation of the facility and personnel in the preparation of CSPs and for performing other functions." If no, go to compliance statements.***	Yes		1.1.3, 2
1.1	The designated person(s) (for the QA program) has the training, experience, responsibility, and authority to perform the duties required of them.	Yes		18
1.2	The designated person(s) is responsible and accountable for the performance and operation of the facility. ***Per USP, "The designated person(s) is responsible for ensuring that each area related to CSP preparation meets the classified air quality standard appropriate for the activities conducted in that area. The designated person(s) must also ensure that the ISO Class 5 areas are located, operated, maintained, monitored, and certified to have appropriate air quality."***	Yes		2, 4.2, 4.5

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
1.3	The designated person(s) is responsible for personnel performing sterile compounding or other related functions (eg, quality checks and prescription dispensing of compounded preparations).	Yes		2, 17
1.4	The designated person(s) reviews facility SOPs at least every 12 months to ensure that they reflect current practice and such review is documented.	Yes		2, 17
1.5	The designated person(s) ensures that SOP revisions are implemented.	Yes		2, 17
1.6	The designated person(s) communicates all SOP revisions to all impacted personnel. ***Inspector note: USP <797> recommends that personnel should also document acknowledgment and communication of SOP changes and revisions.***	Yes		2, 17
1.7	The designated person(s) ensures that personnel demonstrate competency in performing every procedure that relates to their job function.	Yes		2, 17
1.8	The designated person(s) ensures that corrective actions are taken if problems, deviations, out-of-range results, failures, or errors are identified. ***Inspector note: Per USP, "Data collected in response to corrective actions must be reviewed to confirm that the actions taken have been effective."***	Yes		2, 5, 12

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
2.0	Has the pharmacy developed and implemented SOPs that describe sterile compounding processes and other support activities in compliance with USP <797> standards? ***Inspector note: In order for this to be answered yes, all topics must be addressed if applicable to their business practices.*** ***If no, document "missing" in Inspector Notes*** ***If yes, document the name, number, and version of each SOP in the Inspector Notes.***	Yes		17
2.1	**Scope of Practice:** Types of CSPs that are prepared (eg, immediate use, allergenic extracts, Category 1, Category 2, Category 3). Roles and responsibilities of the designated person(s).		SOP 1.40 Facility and Personnel Specifications	1.5
2.2	**Personnel Training and Evaluation:** Description of initial and ongoing training and competency for the designated person(s), compounding personnel, personnel with direct oversight of compounding personnel, and personnel who only perform restocking or cleaning, and disinfecting duties outside of the primary engineering control (PEC). Description of media-fill testing procedures, hand hygiene and garbing competency, and aseptic manipulation competency. Training and competency assessment of personnel on all sterilization methods and equipment used by the facility. Frequency of training is defined.		SOP 4.2 Orientation, Training, and Evaluation	2, 2.2, 10 Box 1, Box 2, Table 2, Table 3
2.3	**Personal Hygiene and Garbing:** Description of the required garb, manner of storage, and order of garbing, including disinfection procedures for reusing goggles, respirators, and other reusable equipment. ***Inspector note: Per USP, the RABS (or pharmaceutical isolator) sleeve and glove changes should (not required) be changed per the manufacturer's recommendations and defined in the facility's SOPs.***		SOP 4.1	3, 3.3

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
6.1	The product is prepared as a single dose for an individual patient.	N/A		1.4
6.2	The approved labeling includes information for the diluent, the resultant strength, the container closure system, and the storage time.	N/A		1.4
7.0	Does the pharmacy perform compounding activities that require the manipulation of a patient's blood-derived or other biological material (eg, autologous serum)?	N/A		1.1.2
8.0	For compounding activities that require the manipulation of a patient's blood-derived or other biological material, does the pharmacy perform manipulations that are clearly separated from other compounding activities and equipment used in CSP preparation activities and are controlled by specific SOPs to avoid any cross-contamination? ***Inspector note: Per USP, a separate cart could be used for blood-derived or other biological materials (a separate area is not required by the chapter). Pharmacy should change garb. Pharmacy to have cleaning processes as part of SOPs to avoid cross-contamination.*** ***If the pharmacy does not compound with blood products or other biological materials, inspector should answer statement as N/A. If the inspector answers the compliance question as "no", please describe your observations.***	N/A		1.1.2

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Facility Design and Engineering Controls			4
9.0	**Segregated Compounding Area (SCA):** Does the pharmacy use an SCA as an SEC in compliance with USP <797> standards for facility design and environmental control? ***Inspector note: Per USP, only Category 1 CSPs may be compounded in a SCA.*** ***If no, go to compliance statements.*** ***If pharmacy only uses a cleanroom suite for sterile compounding preparations, inspector should answer question as N/A.***	N/A		4.1, 4.1.1, 4.1.2, 4.2.1 Table 5
9.1	The facility is designed to afford a well-lighted and comfortable working environment.	N/A		4.2, 4.2.1
9.2	Only Category 1 CSPS are prepared in a SCA. ***If pharmacy is compounding Category 2 or Category 3 CSPs in a SCA, inspector should answer this statement as no and collect photographs and copies of the MFR, CR, and provide a description of their observations in the Inspector Notes.***	N/A		4.2.1, 4.2.3 Table 5
9.3	The SCA is located away from unsealed windows, doors that connect to outdoors, and traffic flow. ***Inspector note: Per USP, "strong air currents from opened doors, personnel traffic, or air streams from the HVAC system can disrupt the unidirectional airflow of an open-faced PEC."***	N/A		4.2.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
9.4	The SCA is located away from environmental control challenges and separate from areas not related to compounding (ie, restrooms, warehouses, food preparation areas).	N/A		4.2.1
9.5	A visible perimeter establishes the boundaries of the SCA. ***Inspector note: Per USP, the SCA is defined as "a designated space, area, or room that is not required to be classified and is defined with a visible perimeter. The SCA must contain a PEC and is suitable for preparation of Category 1 CSPs only." USP further defines a perimeter as "a visible demarcation (such as a door, walls, or visible marking on the floor) that defines the SCA or AECA." The perimeter will be defined in the pharmacy's SOPs. Tape or an alternative method may be used to define this visible perimeter, since this is not a classified space.***	N/A		4.2.1 Glossary
9.6	Access to the SCA is restricted to authorized personnel. ***Inspector note: Per USP, authorized personnel includes personnel involved in compounding processes, maintenance, and cleaning.***	N/A		4.2.1
9.7	Free-standing humidifiers/dehumidifiers and air conditioners are not located within the perimeter of the SCA.	N/A		4.2
9.8	Only furniture, equipment, and other materials necessary for performing compounding activities are permitted in the compounding area. ***Inspector note: Per USP, these items should be low-shedding, easily cleaned, and disinfected. This applies to items within the perimeter around the Primary Engineering Control (PEC).***	N/A		4.5

[redacted] Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
9.9	Shipping cartons or other corrugated or uncoated cardboard are not allowed in the SCA.	N/A		4.5
9.10	The SCA and all surfaces (walls, floors, counters, equipment) are clean, uncluttered, and dedicated to compounding.	N/A		4.2.1, 4.3.2
9.11	The sink is located inside the SCA or in close proximity and is located at least one meter away from the PEC.	N/A		4.4
9.12	The area within one meter of the PEC is dedicated only for sterile compounding (eg, not storage, hand hygiene, donning and doffing garb, or other highly particle-generating activities, such as patient care).	N/A		4, 4.2.1
9.13	If overhangs or ledges are present in the SCA, are they easily cleanable? ***If no, describe observations in Inspector Notes.***	N/A		4.2.1, 4.3.2
10.0	Are surfaces smooth, impervious, free from cracks and crevices, and non-shedding so they can be cleaned and disinfected? ***Inspector note: this is a recommendation by USP.*** ***If no, describe in comments Inspector Notes (eg, peeling of Formica countertops).***	Yes		4.3.2

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
11.0	Are surfaces resistant to damage from cleaning, sanitizing, and sporicidal agents used? ***Inspector note: this is a recommendation by USP.*** ***If no, describe in comments inspector observations (ie observed rust on preparation cart or flaking of particle board on shelving).***	Yes		4.2.1, 4.3.2
12.0	**Cleanroom Suite:** Does the pharmacy use a Cleanroom Suite (ISO-classified anteroom and buffer room) as a SEC in compliance with USP <797> standards for facility design and environmental control? ***Inspector note: Per USP <797>, a cleanroom suite is required if compounding any Category 2 and Category 3 CSPs.*** ***If no, go to compliance statements.*** ***If pharmacy only uses an SCA for Category 1 CSPs, inspector should answer question as N/A.***	Yes		4.1, 4.1.1, 4.1.2, 4.2.1, 4.3.1 Table 5
12.1	Access to the cleanroom suite is restricted to authorized personnel. ***Inspector note: Per USP, authorized personnel includes personnel involved in compounding processes, maintenance, and cleaning. Some examples pharmacies may use to demonstrate compliance with this statement (but are not specifically required by the chapter) include posting a sign or creating a badge access point for authorized personnel to enter the cleanroom suite.***	Yes		4.2.1
12.2	The facility is designed to afford a well-lit environment.	Yes		4.2, 4.2.1
12.3	The facility provides a comfortable working environment (eg, temperature and humidity settings so appropriate garb can be donned).	Yes		4.2.1

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
12.4	The anteroom and buffer room are separated from surrounding unclassified areas by fixed walls and doors.	Yes		4, 4.2.1
12.5	Controls are in place to minimize the flow of lower-quality air into the more-controlled areas. ***Inspector note: Per USP, "strong air currents from opened doors, personnel traffic, or air streams from the HVAC system can disrupt the unidirectional airflow of an open-faced PEC."***	Yes		4.2.1
12.6	Anterooms providing access to only positive pressure buffer rooms meet at least ISO Class 8 specifications. ***If the pharmacy has a negative pressure room, inspector should answer statement as N/A.***	N/A		4.1.2, 4.2.1
12.7	The anteroom provides access to a negative pressure room and meets at least ISO Class 7 specifications. ***If the pharmacy does not compound hazardous drugs, inspector should answer statement as N/A.***	Yes		4.1.2, 4.2.1
12.8	The buffer room, where the PEC is placed, meets ISO Class 7 or better air quality specifications. ***Inspector note: If the PEC is a pharmaceutical isolator, the buffer room must be at least ISO Class 8 air quality or better and an anteroom is not required.*** ***Per USP <797>, a pharmaceutical isolator is defined as an enclosure that provides HEPA-filtered ISO Class 5 unidirectional air operated at a continuously higher pressure than its surrounding environment and is decontaminated using an automated system. It uses only decontaminated interfaces or rapid transfer ports for materials transfer. A CAI or CACI is not a pharmaceutical isolator.***	Yes		4.1.2, 4.2.1, 4.2.3

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
12.9	Air supply to the anteroom and buffer room is introduced through HEPA filters in the ceiling.	Yes		4.2.1
12.10	Air returns are located low on the wall. ***If the pharmacy has a visual smoke study (as described in the USP chapter and compliance statement below), inspector should answer statement as N/A.***	Yes		4.2.1
12.11	A visual smoke study demonstrates an absence of stagnant air where particles can accumulate and is repeated if any equipment/placement changes when air returns are not located low on the wall. ***Inspector note: Per USP, "the smoke study, along with environmental monitoring, must be repeated whenever a change is made to the placement of equipment within the room or any other alteration is performed within the cleanroom suite that affects the quality of the air (eg, HVAC alterations, chapter of HEPA filter units)."*** ***If air returns are low on the wall, inspector should answer statement as N/A.***	N/A		4.2.1
12.12	The anteroom has a line of demarcation to separate the dirty side from the clean side or has two separate anterooms, a dirty anteroom and a clean anteroom. ***Describe observations for the type of line of demarcation in the Inspector Notes.***	Yes	The line of demarcation is black tape on the floor.	4.2.1
12.13	Personnel enter the dirty side/room first from the unclassified area and the clean side/room is located closest to the buffer room.	Yes		4.2.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
16.1	Before any item is introduced into the SEC, placed into the pass-through chamber, or brought into the SCA (providing that packaging integrity will not be compromised), it is wiped with a sporicidal disinfectant, EPA-registered disinfectant, or sterile 70% isopropyl alcohol (IPA) using low-lint wipers by personnel wearing gloves.	Yes		4.5
16.2	Before any item is introduced into the PEC, it is wiped with sterile 70% IPA using sterile low-lint wipers and allowed to dry before use.	Yes		4.5
17.0	Does the pharmacy have the appropriate facility design and controls (including the fixtures, types of equipment, materials, and supplies that are stored) in the classified areas in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		4, 9.1, 19.1
17.1	The sink used for hand hygiene, located outside of the anteroom, is placed in an appropriate area and clean space to minimize the risk of bringing contaminants into the anteroom. ***Inspector note: Inspector should evaluate the sink location in relation to the activities that occur where the sink is located as well as the distance between the sink and the entrance to the compounding suite/SCA. Examples that may not be considered appropriate include but are not limited to: sink is located in the bathroom, an adjacent suite or property, or in an employee breakroom where food is prepared.*** ***If the sink is located in the anteroom, inspector should answer statement as N/A.***	Yes		4.4

18.2	The pharmacy records the temperature of the cleanroom suite on days when sterile compounding occurs. ***If pharmacy does not use a continuous recording system, describe the frequency of temperature recording in the notes.***	Yes		4.2, 9.3.4, 19.1
18.3	The pharmacy records the humidity of the cleanroom suite on days when sterile compounding occurs. ***If pharmacy does not use a continuous recording system, describe the frequency of humidity recording in the notes.***	Yes		4.2, 9.3.4, 19.1
18.4	The pharmacy maintains records of temperature and humidity that are specific to the cleanroom suite. ***Temperature and humidity for drug storage areas will be documented in the general pharmacy module.*** ***If the pharmacy only uses an SCA, inspector should answer statement as N/A.***	Yes		4.2, 9.3.4, 19.1
18.5	The pharmacy can readily retrieve temperature and humidity records. ***If the electronic monitoring system is only capable of providing text message alerts for excursions alone (eg, a report cannot be generated for ongoing temperature conditions), inspector should answer statement as "No."***	Yes		4.2, 9.3.4, 19.1

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
18.6	The pharmacy controls temperature and humidity to maintain appropriate working conditions if no overnight drug storage occurs and/or is following the most restrictive drug label. ***Inspector note: Per USP <797>, the cleanroom suite should be maintained at a temperature of 20°C or cooler and a relative humidity of 60% or below to minimize the risk of microbial proliferation and to provide comfortable conditions for compounding personnel attired in the required garb. CRT is defined as 20°C-25°C per USP <659>.***	Yes		4.2, 9.3.4, 19.1
18.7	The placement of the HVAC unit does not cause cross contamination or interfere with the functioning of the classified area. ***Inspector note: Air streams from the HVAC system(s) can disrupt the unidirectional airflow of an open faced PEC such as a laminar airflow workbench (LAFW).***	Yes		4, 4.2
18.8	Temperature monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. ***Inspector note: Monitoring devices are typically calibrated or replaced.***	Yes		4.2, 9.3.4
18.9	Humidity monitoring devices are verified for accuracy at least every 12 months or as required by the manufacturer. ***Inspector note: Monitoring devices are typically calibrated or replaced.***	Yes		4.2, 9.3.4

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
19.0	Does the pharmacy store drugs in the cleanroom suite overnight and/or for long periods of time? ***Inspector note: Long periods of time is not defined as pre-compounding preparation right before compounding activities are commenced.***	No		4.2, 9.3.4, 19.1
20.0	If the pharmacy is storing drugs inside the cleanroom suite overnight and/or long periods of time, are any of the drugs stored unable to tolerate temperature excursions?	N/A		4.2, 9.3.4, 19.1
21.0	What is the current temperature of the cleanroom suite/SCA? ***Record in the Inspector Notes.***		62.4°F	4.2, 9.3.4, 19.1
22.0	What is the current relative humidity percentage of the cleanroom suite/SCA? ***Record in the Inspector Notes.***		59.5%	4.2, 9.3.4, 19.1
23.0	Is the humidity maintained at less than 60% relative humidity (RH) in the compounding area to minimize risk of microbial proliferation?	Yes		4.2, 9.3.4, 19.1

Verified Pharmacy Program® Inspection Form

[redacted] Sterile Compounding Inspection for USP <797>: [redacted]

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
24.0	Is differential positive pressure maintained in compliance with USP <797> standards? ***Inspector note: Per USP <797>, no pressure differential is required between the SCA and the surrounding area.*** ***If no, go to compliance statements.*** ***Inspector should view logs and current status (while observing compounding) to verify.*** ***If the pharmacy uses an SCA for sterile compounding environment, inspector should answer statement as N/A.***	Yes	Logs reviewed	4.2.1, 4.2.5, 5
24.1	The facility design creates room separation to allow positive pressure differentials between spaces (rooms) for movement of air from higher quality air to lower quality air. ***Inspector should review a graphic of the airflow contained in the certification report.***	Yes	Graph reviewed	4.2.1, 4.2.5, 5
24.2	The facility has a system in place to continuously monitor pressure differentials (eg, magnehelic gauge). ***Per USP, pressure differentials need to be monitored continuously, but personnel are not specifically required to visually monitor pressure during compounding activities.***	Yes		4.2.1, 4.2.5, 5
24.3	The facility has a record system to record pressure differentials on days when compounding occurs. ***Inspector note: Per USP, the quantitative results from the pressure monitoring device must be reviewed and documented at least daily on the days when compounding is occurs.***	Yes		4.2.1, 4.2.5, 5

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
24.4	The differential positive pressure between unclassified and the first space in the compounding suite is at least 0.020 inch water column. ***Inspector note: Per USP, certifiers should confirm (this is a USP recommendation) positive pressure around doorways, pass-throughs and any opening in the cleanroom suite with smoke testing (to confirm positive pressure is maintained) with initial certification of the cleanroom suite.*** ***If no, record the observed pressure differential between the two identified spaces (eg, ISO Class 8 anteroom and the general pharmacy area).***	Yes		4.2.1, 4.2.5, 5
24.5	The differential positive pressure between adjacent classified areas is at least 0.020 inch water column. ***If no, record the observed pressure differential between the two identified spaces (eg, ISO Class 8 anteroom and the ISO Class 7 buffer room).***	Yes		4.2.1, 4.2.5, 5
24.6	Pressure differential monitoring and quantitative results are reviewed and documented at least daily on days when compounding occurs.	Yes		4.2.1, 4.2.5, 5
25.0	Does the pharmacy have a policy in place to cease compounding when the pharmacy is unable to maintain positive pressure differentials (outside of anticipated variations due to opening and closing of doors)?	Yes		4.2.1, 4.2.5, 5
26.0	Are pressure differential monitoring procedures in place that include an alarm or alert when there is an excursion? ***Inspector note: USP <797> does not require there to be an alarm or an alert.***	Yes		4.2.5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
27.0	Does the facility perform both sterile and nonsterile compounding?	Yes		4.2.1
28.0	If the pharmacy performs nonsterile compounding and sterile compounding, are the designated areas separate and distinct from each other?	Yes		4.2.1
29.0	If PECs are placed into the same room that are used for both sterile and nonsterile compounding, is the pharmacy in compliance with USP <797> standards? ***Inspector note: Per USP <797>, PECs used for both sterile and nonsterile compounding may be placed in the same room only if the PECs are sufficiently effective that the room can continuously maintain ISO Class 7 classification.*** ***If no, go to compliance statements.*** ***If the pharmacy does not perform nonsterile compounding in the same room as sterile compounding, inspector should answer this question as N/A.***	N/A		4.2.1, 4.2.6
29.1	PECs used for nonsterile compounding are placed at least one meter away from PECs used for sterile compounding.	Yes		4.2.1
29.2	Particle-generating activity must not be performed while sterile compounding is in process.	Yes		4.2.1
29.3	PECs are sufficiently effective that the room can continuously maintain ISO Class 7 classification air quality during nonsterile compounding.	Yes		4.2.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
30.0	Does the pharmacy prepare Category 2 and Category 3 CSPs from nonsterile components? ***Inspector note: Category 1 CSPs can be made from nonsterile components.*** ***If the pharmacy does not compound using nonsterile components, the inspector should answer question as N/A.***	Yes	Pharmacy does not perform Category 3 compounding.	4.2.1, 4.2.6
31.0	Does the pharmacy's presterilization procedures comply with USP <797> standards? ***If no, go to compliance statements.*** ***If the pharmacy does not compound using nonsterile components, the inspector should answer question as N/A.***	Yes		4.2.6
31.1	Presterilization procedures, such as weighing and mixing, are completed in an ISO Class 8 or better environment (eg, anteroom or buffer room). ***Inspector note: This statement only applies for Category 2 and Category 3.***	Yes		4.2.6
31.2	Presterilization procedures, such as weighing and mixing, are performed in a single-use containment glove bag, CVE, BSC, or CACI to minimize the risk of airborne contamination. ***Inspector note: This statement only applies for Category 2 and Category 3. CVEs, BSCs, or CACIs used for presterilization procedures must be certified at least every six months.***	Yes		4.2.6

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Certification and Environmental Monitoring Inspector to review past two (2) Certification reports for the SEC and all PECs.			5
32.0	Does the pharmacy ensure that each area related to CSP preparation is certified to meet the classified air quality standard appropriate for the activities conducted in that area in compliance with USP <797> standards? ***If no, go to compliance statements.*** ***Inspector is to review current certification reports.***	Yes	Only 1 report has been done since new pharmacy.	5
32.1	The most recent PEC and SEC certification reports are available for review.	Yes		4.2, 5, 20
32.2	Certification of all classified areas, including PECs, is performed at least every six months.	Yes		4.2.3, 5
32.3	Certification of all classified areas, including PECs, is performed whenever a device is relocated or a major service to the facility is performed. ***Inspector note: Classified areas must be recertified if there are changes to the area such as redesign, construction, replacement or relocation of any PEC, or alteration in the configuration of the room that could affect airflow or air quality.***	Yes		5
32.4	Certification reports are reviewed by the designated person(s). ***Inspector note: If the designated person(s) review is not documented, describe how it is ensured that the review occurred.***	Yes		4.2, 5

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
32.5	All ISO Class 5 PECs (laminar airflow workbenches or areas, BSCs, CAIs, CACIs, pharmaceutical isolators, IVLFZ, and robotic enclosures) have been certified within the last six months. ***If no, record the date of the last certification and include a copy of the certification report with the inspection report.***	Yes		4.2.3, 5
32.6	All PECs meet ISO Class 5 air quality requirements with (total, nonviable) particle counts documented within the report. ***Inspector note: Per ISO definition, ISO Class 5 areas are certified as having less than 3,520 particles per cubic meter of air under dynamic operating conditions.*** ***If no, describe what occurred and the pharmacy's response to total airborne particle sampling results, data evaluation, and action level (eg, pharmacy took PEC out of service, pharmacy ordered new HEPA filter, PEC was repaired and re-certified).***	Yes		4.1.1, 5.1 Table 4
32.7	All ISO Class 7 and 8 SECs (clean/buffer rooms and anterooms) have been certified within the last six months. ***Inspector note: Per ISO definition, ISO Class 7 areas are certified as having less than 352,000 particles per cubic meter of air under dynamic operating conditions and ISO Class 8 areas are certified as having less than 3,520,000 particles per cubic meter of air under dynamic operating conditions.*** ***If no, record the date of the last certification and include a copy of the certification report with the inspection report.***	Yes		4.1.1, 4.1.2, 5.1 Table 4

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
32.8	All SECs meet ISO Class 7 air quality requirements and ISO Class 8 air quality requirements where permitted, with particle counts documented within the report. ***If no, describe what occurred and the pharmacy's response (eg, pharmacy reduced BUD, pharmacy used an alternative facility, pharmacy followed mitigation strategies, and/or disaster planning processes).***	Yes		4.1.1, 5.1 Table 4
33.0	Does the certification report received by the pharmacy have all required elements documented for the pharmacy's designated person(s) to make an informed decision related to functionality of PEC and SEC environments in compliance with USP <797> standards? ***Inspector note: It is recommended that the designated person review the certification report in its entirety.*** ***If no, go to compliance statements.***	No		5, 20
33.1	The certification report includes information about the equipment used for performing each test including last calibration date (or date when next calibration is due). ***Inspector note: Per USP, "total particle count testing must be performed under dynamic operating conditions using calibrated electronic equipment" and "all impaction air samplers must be serviced and calibrated as recommended by the manufacturer."***	Yes	Next calibration due June 30, 2025. This report was As-Built and did not include personnel for dynamic operating conditions.	5.1, 6.1, 20
33.2	The certification report includes the name of the certifier. ***Inspector note: Per USP <797>, a qualified certifier may have received training and education from professional organizations such as the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) and Controlled Environment Testing Association (CETA). Both organizations provide certification (Registered Certification Professional – Sterile Compounding Facilities), education, and resources.***	Yes		5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP<797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
33.3	The certification report describes the "dynamic conditions" including the number of personnel in the cleanroom suite. ***Inspector note: Compounders can perform mock compounding activities and/or performing media-fill while the certifier is conducting testing. Number of personnel present in the SEC must be documented.***	No	New pharmacy has only had initial certification preopening. The report notes no personnel present.	5, 20
33.4	**SEC: Airflow testing** is performed and documented on the certification report to determine acceptability of the **air volume and room air exchange rate (ACPH)**: ***Inspector note: Per USP <797>, unclassified SCAs have no ACPH requirement.*** ***If pharmacy only compounds in an SCA, inspector should answer statement as N/A.***	Yes		4.2.4, 5 Table 6
33.5	**SEC:** All of the following ACPH required elements were documented on the certification report: the ACPH from HVAC, the ACPH contributed from the PEC, and the total ACPH. ***If pharmacy only compounds in an SCA, inspector should answer statement as N/A.***	Yes		4.2.4, 5
33.6	**The ISO Class 8 anteroom** is certified and documented as having a minimum of 20 ACPH with at least 15 ACPH of the total air change rate coming from HVAC through HEPA filters located in the ceiling. ***If the pharmacy has an ISO Class 7 anteroom, inspector should mark as N/A.***	Yes		4.2.4, 5 Table 6

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
33.7	**The ISO Class 7 buffer room and ISO Class 7 anteroom (if required)** is certified and documented as having a minimum of 30 ACPH with at least 15 ACPH of the total air change rate in a room coming from the HVAC through HEPA filters located in the ceiling. ***Inspector note: If the PEC is used to meet the minimum total ACPH requirements, the PEC must not be turned off, except for maintenance.***	Yes		4.2.4, 5 Table 6
33.8	**SEC: Airflow testing** is performed and documented on the certification report to determine acceptability of the **room pressure differential** in doorways between adjacent rooms.	Yes		4.2.5, 5
33.9	**SEC:** The differential pressure measured was at least 0.020 inch water column positive from the cleanroom to the anteroom and between the anteroom and all adjacent spaces with the doors closed. ***Inspector note: No pressure differential is required between the SCA and the surrounding area.***	Yes		4.2.1, 4.2.5, 5
33.10	**SEC:** All SEC HEPA filters were leak tested (to confirm **HEPA filter integrity**).	Yes		5
33.11	**SEC:** All SEC HEPA filters with leaks were repaired. ***If leaks were not repaired, describe what actions pharmacy took (eg, pharmacy implemented mitigation strategies such as reduced BUD or used alternative pharmacy location).*** ***If no repairs were needed, inspector should answer statement as N/A.***	N/A		5

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
33.12	**PEC: (Dynamic airflow) Smoke pattern tests** are performed for each PEC during dynamic operating conditions to demonstrate unidirectional airflow and sweeping action over and away from the CSPs. ***Inspector note: Per USP, "HEPA-filtered air must be supplied by the PEC at a velocity sufficient to sweep particles away from critical sites and maintain unidirectional airflow during operations. Proper design, control, and use minimizes turbulence and creation of eddies or stagnant air in the PEC."*** ***Describe if smoke pattern testing of PEC was documented thoroughly in the report or through video.***	No	Smoke testing documented in report but not under dynamic operating conditions as noted.	4.2.2, 4.2.3, 5
33.13	**PEC: Dynamic airflow smoke pattern** confirms equipment and supplies necessary for performing compounding activities in the PEC do not disrupt unidirectional airflow. ***Inspector note: Per USP, "Proper placement of equipment in a PEC must be initially verified by a dynamic airflow smoke pattern test to demonstrate minimal disruption in airflow. The dynamic airflow smoke pattern test must be repeated if equipment is placed in a different location."***	Yes		4.2.2, 4.2.3, 4.5, 5, 9.1
33.14	**PEC: Total (nonviable) particle count** testing was performed under dynamic operating conditions using calibrated electronic equipment. ***Inspector note: Per USP, "Measurements of total airborne particles must be taken in each PEC at locations where there is greatest risk to the exposed CSPs, containers, and closures...Measurements of total airborne particles in other classified areas, including the buffer room(s) and anteroom(s), should be taken at representative locations that reflect the quality of air in the room(s)."***	No	Testing done without personnel present due to As-Built inspection.	5, 5.1

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
33.15	**PEC:** All PEC HEPA filters were leak tested (to confirm HEPA filter integrity). ***Inspector note: The certification report for each PEC should show air velocities within the PEC.***	Yes		5
33.16	**PEC:** All PEC HEPA filters with leaks identified were repaired. ***If leaks were not repaired, describe what actions pharmacy took (example: PEC taken out of service until HEPA filter could be replaced).*** ***If no repairs were needed, inspector should answer statement as N/A.***	N/A		5
33.17	**PEC-IVLFZ:** Pharmacy's integrated vertical laminar flow zone (IVLFZ) meets design, functional requirements, and certification requirements under USP <797>. ***Inspector note: Per USP <797>, "Strategic location of air returns in addition to full coverage of HEPA-filters above the work surface is required. Both static and dynamic smoke studies of air returns in addition to full coverage of HEPA-filtered air void of turbulence, dead air zones, and refluxing from the HEPA filters to and across the entire work area and to the air returns must be documented (eg, with video)."*** ***If pharmacy does not use an IVLFZ, inspector should answer statement as N/A.***	Yes		4.2.3

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
33.18	If a **robotic enclosure is used as the PEC**, or placed within the PEC, a dynamic airflow smoke pattern test must be performed initially and at least every 6 months thereafter to ensure that: 1) it is properly integrated into the facility, 2) there is no turbulence or refluxing at any critical site(s), 3) room air does not enter the PEC where sterile products and/or preparations may be exposed, and 4) all processes can be performed without introducing contamination to the direct compounding area(s). ***If pharmacy does not use a robotic enclosure, inspector should answer statement as N/A.***	N/A		4.2.3
34.0	Was smoke testing performed in SEC to confirm all particle generating equipment (eg, computers, printers, refrigerators, PECs) do not disrupt airflow? ***Inspector note: This question will be N/A unless the pharmacy is new, has recently completed construction, or equipment has been moved within SEC since last certification.***	Yes		5
35.0	Does the pharmacy have an established environmental monitoring (eg, microbiological air and surface monitoring) program in compliance with USP <797> standards? ***Inspector note: Per USP, "The goals of a microbiological air and surface monitoring program are to determine whether contamination is present at unacceptable levels and to assess whether proper personnel practices are being followed, cleaning and disinfecting agents are effective, and environmental quality is maintained."*** ***If no, go to compliance statements.***	Yes		6, 6.1, 6.2

Verified Pharmacy Program® Inspection Form

[redacted] Sterile Compounding Inspection for USP <797> [redacted]

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
35.1	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed initially in the selected sampling sites to establish a baseline level of environmental quality for each classified area, ie, each ISO Class 5 PEC, each ISO Class 7, and ISO Class 8 room.	Yes		6, 6.1, 6.2
35.2	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed in conjunction with the certification of new facilities and equipment.	Yes		6, 6.1, 6.2
35.3	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed after any servicing of facilities or equipment.	Yes		6, 6.1, 6.2
35.4	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed in response to identified problems (eg, positive growth in sterility tests of sterile compounded preparation).	Yes		6, 6.1, 6.2
35.5	Environmental monitoring program (eg, viable air and/or surface monitoring) is performed in response to identified trends (eg, repeated positive gloved fingertip and thumb sampling results, failed media fill testing, or repeated observations of air or surface contamination).	Yes		6, 6.1, 6.2

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
35.6	Results from the environmental monitoring program (eg, viable air and/or surface monitoring) are reviewed in response to changes that could impact the sterile compounding environment (eg, change in cleaning agents) and in conjunction with personnel data (ie, training records, visual observations, competency assessments) to assess the state of control and to identify potential risks of contamination. ***Inspector note: Per USP, the program is reviewed to "assess risks for contamination, potential routes of contamination, and the adequacy of cleaning and disinfecting agents and procedures. Regular review of the sampling data must be performed to detect trends and the results of the review must be documented."***	Yes		6, 6.1, 6.2, 20 Table 4, Table 7, Table 8
35.7	The pharmacy ensures that viable air and surface sampling is performed by a trained and competent individual who is familiar with the methods and procedures for air sampling and surface testing. ***If sampling is conducted by internal personnel, inspector should verify that documented training and competencies are located in the employee file.***	Yes	Employee file reviewed.	6, 6.1, 6.2
35.8	Environmental monitoring program (eg, viable air and/or surface monitoring) describes/identifies corrective actions to minimize the risk of CSP contamination and that these corrective actions are documented.	Yes		6, 20
36.0	Is surface sampling performed at the end of a compounding activity or shift but before the area has been cleaned and disinfected (to obtain a sample that is representative of the typical compounding conditions at the pharmacy)? ***Inspector note: this is a USP recommendation.***	Yes		6.1, 6.3

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
37.0	Does the pharmacy send out all air quality for viable airborne samples to an external lab (third party) for incubation and processing? ***If pharmacy exclusively does internal incubation and results processing, inspector should answer statement as N/A.***	N/A		6.2.2
38.0	Does the pharmacy send out all surfaces for viable particle samples to an external lab (third party) for incubation and processing? ***If pharmacy exclusively does internal incubation and results processing, inspector should answer statement as N/A.***	N/A		6.3
39.0	For any samples that are sent to an external lab (third party), does the pharmacy receive a report from the third party confirming incubation parameters meet USP <797> requirements (eg, the correct temperature and the correct length of incubation time are documented in the report)? ***Inspector note: Incubation parameters are the same as seen in statements 40.6-40.7 and 41.4-41.5.*** ***This question applies for any air or surface sample sent to an external lab. If no, describe observations.***	N/A		6.2.2
40.0	Are processes for sampling and monitoring air quality for viable airborne particles in compliance with USP <797> standards? ***Inspector note: Per USP <797>, facilities performing any Category 3 compounding must adhere to the increased environmental monitoring requirements for all classified areas where Category 3 CSPs are compounded and increased environmental monitoring requirements apply at all times regardless of whether Category 3 CSPs are being compounded on a given day.*** ***Review six months of air sampling data to verify. If no, go to compliance statements.***	Yes		6.2, 6.2.1, 6.2.2, 6.2.3, 14.4.2 Box 5, Table 7

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
40.1	All classified areas are sampled using a volumetric active air sampling device (impaction air sampler). ***Inspector note: This sampling must be performed during dynamic operating conditions (to obtain a sample that is representative of the typical compounding conditions at the pharmacy).***	Yes		6.1, 6.2.1
40.2	All classified areas are sampled at the **frequencies** specified by USP for volumetric active air sampling. ***Inspector note: Per USP <797>, Category 1 and Category 2 compounding frequency is every six months and Category 3 compounding frequency is monthly.*** ***For facilities compounding any Category 3 CSPs, this must be completed within 30 days prior to the commencement of any Category 3 compounding and at least monthly thereafter regardless of the frequency of compounding Category 3 CSPs.***	Yes		6.2.1, 14.4.2
40.3	At least one cubic meter (1000 L) of air is tested using the volumetric active air sampling device from each sample location.	Yes		6.2.2 Box 5
40.4	All impaction air samplers are serviced and calibrated as recommended by the manufacturer.	Yes		6.1
40.5	The pharmacy uses an appropriate microbiological growth media for sampling. ***Inspector note: An appropriate microbiological growth media means a media that supports the growth of bacteria and fungi (eg, TSA), accompanied by a COA that verifies that the media meets expected growth promotion, pH, and sterilization requirements.***	Yes		6.2.2 Box 5

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
40.6	The pharmacy incubates all air samples for time and temperature in compliance with USP <797> following the one media device method. ***Inspector notes: Per USP <797> (Box 5), when using the one media device method, sampling media is to be covered, inverted, and incubated at 30°C–35°C for no less than 48 hours. Then, after examination and recording of results, further incubated at 20°C–25°C for no less than five additional days.*** ***If the pharmacy does not utilize this method or sends offsite, inspector should answer statement as N/A.***	Yes		6.2.2 Box 5
40.7	The pharmacy incubates all air samples for time and temperature in compliance with USP <797> following the alternative two media device method. ***Inspector note: Per USP <797> (Box 5), two samples may be collected for each sample location and incubated concurrently to shorten the overall incubation period. Both samples are TSA, or one sample is TSA and the other fungal media (eg, malt extract agar [MEA] or sabouraud dextrose agar [SDA]). Each sample is incubated in a separate incubator, one sample at 30°C-35°C for no less than 48 hours the other sample at 20°C-25°C for no less than five days. If fungal media is used, incubate at 20°C-25°C for no less than five days.*** ***If the pharmacy does not utilize this method or sends offsite, inspector should answer statement as N/A.***	N/A		6.2.2 Box 6
40.8	Results for all plates are recorded for each sample and did not exceed USP <797> Table 7 action levels (or internal action levels if more restrictive). **ISO Class 5: >1 cfu/m^3/device** **ISO Class 7: >10 cfu/m^3/device** **ISO Class 8: > 100 cfu/m^3/device** ***Inspector note: Per USP <797>, if two sampling media devices are collected at a single location, all recovered growth on each must be documented and action levels applied to each sampling media separately.***	Yes		6.2.3 Table 7

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
40.9	For any air sample locations exceeding action levels, pharmacy works with the assistance of a microbiologist to identify any microorganisms recovered to the genus level. ***Inspector note: Per USP <797>, an attempt must be made (meaning the lab attempted to identify the microorganisms and was unsuccessful).***	Yes		6.2.3
40.10	For any areas that exceed action levels, an investigation is conducted to attempt to determine cause and a corrective action plan is implemented.	Yes		6.2.3
41.0	Are processes for sampling and monitoring **surfaces for viable particles** in compliance with USP <797> standards? ***Review six months of surface sampling data to verify. If no, go to compliance statements.***	Yes		6.3
41.1	**Surfaces** and pass-through chambers in the cleanroom suite and SCA are sampled for microbial contamination for each classified area. ***Inspector note: Sampling locations must include work surfaces in each classified room, the interior of each ISO Class 5 PEC, and all pass-through chambers connecting to classified areas. USP recommends samples be taken from: equipment contained within the PEC, staging or working area near the PEC, and frequently touched surfaces.***	Yes		6.3, 6.3.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
41.2	**Surfaces** within the cleanroom suite and SCA are sampled at the **frequencies** specified by USP for viable particle surface sampling. ***Inspector note: Category 1 and Category 2 CSP surface sampling frequency is monthly and Category 3 compounding is weekly, regardless of the frequency of compounding Category 3 CSPs.*** ***Additionally, surface sampling is to be performed within the PEC used to prepare Category 3 CSPs, at the end of each batch, before cleaning and disinfection occurs unless a self-enclosed robot is used. If a self-enclosed robot is used, frequency is at least once daily at the end of compounding operations.*** ***For facilities compounding any Category 3 CSPs, a surface sampling must be completed prior to assigning BUDs longer than the limits established in Table 13.***	Yes		6.3, 6.3.1, 14.4.2
41.3	The pharmacy uses an appropriate microbiological growth media for sampling. ***Inspector note: An appropriate microbiological growth media means a surface sampling device with a raised convex surface for sampling flat surfaces is used that contain general microbial growth media that supports the growth of bacteria and fungi (eg, TSA supplemented with additives that neutralize effects of any disinfecting agent, eg, lecithin and polysorbate 80), accompanied by a COA that verifies that the media meets expected growth promotion, pH, and sterilization requirements. Per USP, "sterile swabs wetted with sterile water or a sterile neutralizing buffer may be used when sampling irregular surfaces and difficult-to-reach locations such as crevices, corners, and spaces between surfaces."***	Yes		6.3.2 Box 6

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Compounding Personal Hygiene and Garbing			
42.0	Does the pharmacy have a process to ensure all personnel entering the compounding area adhere to restrictions intended to minimize the risk of contamination in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		3.1
42.1	Compounding personnel are required to report conditions that may contaminate the sterile preparation and environment to the designated person(s). ***Inspector note: Per USP <797>, examples of conditions that have a higher risk of contaminating the CSP and sterile environment includes: rashes, recent tattoos, oozing sores, conjunctivitis, or active respiratory infections.***	Yes		3, 3.1
42.2	The designated person(s) is responsible for evaluating whether compounding personnel should be excluded from working in compounding areas before their conditions have been resolved. ***Inspector note: Per USP <797>, the designated person(s) may permit accommodations as long as the quality of the CSP and environment will not be affected.***	Yes		3, 3.1
42.3	Any accommodations permitted by the designated person(s) are documented.	Yes		3.1
42.4	Food (including mints, gum, etc) and drinks are not permitted in anterooms, buffer rooms, or segregated compounding areas.	Yes		3.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Media-Fill			
44.0	Is the media-fill testing simulation performed by the pharmacy in compliance with USP <797> standards? ***Inspector note: Per USP, "When performing a media-fill test, simulate the most difficult and challenging aseptic compounding procedures encountered by the person replacing all the components used in the CSPs with soybean-casein digest media. The simulation must capture elements that could potentially affect the sterility of the CSP."*** ***If no, go to compliance statements.***	Yes		2.3
44.1	The simulation captures factors associated with the length of the process that can pose contamination risk (eg, operator fatigue, quality of equipment).	Yes		2.3
44.2	The simulation captures number of aseptic additions or transfers.	Yes		2.3
44.3	The simulation captures number, type, and complexity of manipulations.	Yes		2.3
44.4	The simulation captures number of personnel in the buffer room or SCA.	Yes		2.3
44.5	Does the facility define "the most difficult and challenging procedures" and the rationale for how they are the most challenging? ***Inspector note: Best practice is for this to be documented in an SOP. Inspectors may also find this information documented on a training/competency assessment checklist. For complex/variety of compounding practices, inspectors may find additional media fills are completed (more than what is required by the USP chapters).***	Yes		2.3, 20

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
45.4	Commercial sterile microbial growth media is stored and used before its expiration date. ***Inspector note: Media is to be inoculated by the expiration date, meaning that the test needs to be started (not that incubation needs to be completed before the expiration date).*** ***If pharmacy does not use commercial sterile microbial growth media, inspector should answer statement as N/A.***	Yes		2.3
45.5	Sterile-to-sterile media-fill testing microbial growth media (non-commercial) was prepared and growth promotion capability was demonstrated prior to use, following USP <71>. ***If pharmacy only uses commercial sterile microbial growth media, inspector should answer statement as N/A.***	N/A		2.3
45.6	Nonsterile starting components (commercially available nonsterile soybean-casein digest powder) are dissolved to make a 3% nonsterile solution, manipulated in a manner that simulates nonsterile-to-sterile compounding activities, with a minimum of one positive control container. ***If pharmacy does not perform sterile compounding using nonsterile ingredients, inspector should answer statement as N/A.***	Yes		Box 2

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
	Cleaning and Disinfection			7
46.0	Is the pharmacy equipped with the necessary cleaning and disinfecting equipment and supplies that comply with USP <797> standards? ***If no, go to compliance statements.***	Yes		7, 7.1.1, 7.1.2 <1072>
46.1	All cleaning and disinfecting supplies (eg, wipers, sponges, pads, and mop heads), with the exception of tool handles and holders, are low lint (and sterile if used within PEC).	Yes		7.1.2
46.2	Reusable cleaning tools are made of cleanable materials (no wood handles or any other porous material).	Yes		7.1.2
46.3	Reusable cleaning tools are dedicated for use in the classified areas or SCA and are not removed from these areas except for disposal.	Yes		7.1.2
46.4	The pharmacy has the appropriate cleaners **EPA-registered disinfecting agent(s)** to adequately perform cleaning and disinfection. ***Inspector note: Examples of EPA-registered disinfectants include, but are not limited to: phenolics; oxidizers, such as peroxyacetic acid and sodium hypochlorite; quaternary ammonium; and hydrogen peroxide. If the agent is EPA-registered, a registration number will be on the label. Compounding personnel should have access to SDS and information/knowledge on dwell times. Per USP, Box 7, the pharmacy is to ensure the contact time specified by the manufacturer is achieved.***	Yes		7.1.1 Box 7 <1072>

		Observation	Inspector Notes	USP Reference(s)
46.5	The pharmacy has the appropriate **EPA-registered sporicidal agent(s)** to adequately perform sporicidal disinfection. ***Inspector notes: Examples of EPA-registered agents include but are not limited to: oxidizers such as peroxyacetic acid, sodium hypochlorite, and hydrogen peroxide.*** ***Compounding personnel should have access to SDS and information/knowledge on dwell times. Per USP, Box 8, the pharmacy is to ensure the contact time specified by the manufacturer is achieved.*** ***Per USP, Inspector should check to see if agent is effective against Clostridium difficile.***	Yes	Peridox RTU	7.1.1 Box 7 <1072>
46.6	All cleaning and disinfectant agents are appropriately labeled including expiration dates. ***Inspector should verify that no expired agents are present.***	Yes	There are no expired agents present.	7.1.1
46.7	When used in the PEC, any cleaning and disinfecting agents that are not "ready-to-use" sterile formulations are diluted using sterile water. ***If only ready-to-use sterile formulations are used, inspector should answer statement as N/A.***	N/A		7.1.1
47.0	Does the pharmacy's documented **cleaning and disinfection** activities for surfaces in the classified areas and/or SCA comply with the **frequencies** specified in USP <797> Table 10? ***Review cleaning logs to verify. If no, go to compliance statements.***	Yes	Logs reviewed.	7.2 Table 10
47.1	All interior surfaces of the PEC are cleaned and disinfected on days when compounding occurs.	Yes		7.2 Table 10

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
50.1	**APIs:** APIs used are compliant with the criteria in the USP–NF monograph, if one exists. ***If pharmacy does not compound CSPs that have a USP monograph, inspector should answer this statement as N/A.***	Yes		9.3.1
50.2	**APIs:** All APIs used have a COA that includes the specifications (eg, compendial requirements for quality) and that test results for the component show that the API meets expected quality.	Yes		9.3.1
50.3	**APIs:** All APIs used are manufactured by an FDA-registered facility. ***Inspector note: This is a Federal Food, Drug, and Cosmetic Act, Section 503A, requirement as well. Inspector should verify the pharmacy looks up the name of the manufacturer listed on the COA to determine if they are registered as an FDA drug establishment https://dps.fda.gov/decrs.***	Yes		9.3.1
50.4	All **non-API components** comply with the criteria in the USP–NF monograph, if one exists.	Yes		9.3.1
50.5	All **non-API components** are accompanied by documentation (eg, COA, labeling) that include the specifications and test results and shows that the component meets the specifications.	Yes		9.3.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
50.6	All **non-API components** used are manufactured by an FDA-registered facility. ***Inspector note: Per USP <797>, "If a component cannot be obtained from an FDA-registered facility, the designated person(s) must select an acceptable and reliable source (see USP <1197> Good Distribution Practices for Bulk Pharmaceutical Excipients). The compounding facility must establish the identity, strength, purity, and quality of the ingredients obtained from that supplier by reasonable means. Reasonable means may include but are not limited to visual inspections, evaluation of a COA supplied by the manufacturer, and/or verification by analytically testing a sample to determine conformance with the COA or other specifications."***	Yes		9.3.1
51.0	Does the pharmacy have processes in place to evaluate API and non-API components upon receipt and before use in compliance with USP <797> standards? ***Inspector note: Non-API components may be defined as excipients, containers, and container closure systems.*** ***If no, go to compliance statements.*** ***If the pharmacy does not compound with API or other non-API components, inspector should answer question as N/A.***	Yes		9.3.2, 9.3.3
51.1	APIs or other components have been evaluated for use in sterile drug preparation. ***Inspector note: Per USP <797>, "Components labeled with 'not for pharmaceutical use,' 'not for injectable use,' 'not for human use' or an equivalent statement must not be used to compound for these purposes."*** ***If no, photograph and describe in the notes column. Request copies of the invoices for products with these types of labels.***	Yes		9.3.2, 9.3.3

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
51.2	Upon receipt of each lot of a component, personnel verify the labeling and condition of each component and examine the external packaging for evidence of deterioration and other aspects of unacceptable quality (eg, outer packaging is damaged, temperature-sensing indicators show that the component has been exposed to excessive temperatures).	Yes		9.3.2, 9.3.3
51.3	Each lot of commercially available sterile, depyrogenated containers and container-closure systems are accompanied by a COA or other documentation showing conformance with established specifications for sterility and depyrogenation requirements.	Yes		9.3.1, 9.3.2, 9.3.3
51.4	The date of receipt by the pharmacy is clearly marked on each API or component package that lacks a vendor expiration date and are assigned and labeled with an expiration date not to exceed one year after receipt by the pharmacy.	Yes		9.3.2, 9.3.3
51.5	All components are reinspected before use. ***Inspector note: Per USP <797>, all packages must be inspected to detect container breaks, looseness of the cap or closure, and deviation from the expected appearance, aroma, and/or texture of the contents that might have occurred during storage. Sterile container closures are visually reinspected to ensure that they are free from defects that could compromise sterility and that they are otherwise suitable for their intended use.***	Yes		9.3.2, 9.3.3
51.6	Any component found to be of unacceptable quality upon receipt or reinspection prior to use is promptly rejected, clearly labeled as rejected, and segregated from active stock to prevent use before appropriate disposal.	Yes		9.3.2, 9.3.3
51.7	Any other lots of that component from that vendor are examined to determine whether other lots have the same defect.	Yes		9.3.2, 9.3.3

[redacted] Sterile Compounding Inspection for USP <797> [redacted]

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

[redacted]		Observation	Inspector Notes	USP Reference(s)
52.4	When nonsterile ingredients, products, components, or devices (eg, non-sterile APIs and nonsterile vials and closures) are used for compounding, the pharmacy has the appropriate equipment to sterilize the finished product. Per USP, "Injectable compounded preparations that contain nonsterile components or that come into contact with nonsterile devices (eg, containers, tubing) during any phase of the compounding procedure must be sterilized within 6 hours after completing the preparation to minimize the generation of bacterial endotoxins in CSPs." ***If the pharmacy does not perform compounding that requires sterilization, inspector should answer statement as N/A.***	Yes	Filter sterilization	9.1, 9.3.1, 10
53.0	Does the pharmacy operate and maintain records for all equipment used for compounding in accordance with manufacturer specifications and USP <797> standards? ***If no, go to compliance statements.***	Yes		9.1, 20
53.1	Automated, mechanical, or electronic equipment (monitoring equipment, autoclaves, ovens, etc) are periodically inspected and calibrated yearly or in accordance with the equipment manufacturer guidelines.	Yes		9.1, 9.3.4
53.2	Automated compounding devices (ACDs) and other similar equipment (single channel or multi-channel) are assessed for accuracy and calibrated daily, prior to initial use, and a daily record is maintained. ***Inspector note: Per USP, "The precision of the equipment can be monitored based on an assessment of day-to-day variations in its accuracy measures. Compounding personnel must maintain a daily record of the accuracy measurements on the days the equipment is in use. Corrective actions must be implemented if accuracy measurements are outside the manufacturer's specification."***	Yes		9.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
53.3	Incubators used for environmental and personnel monitoring are placed in a location outside of the sterile compounding area and calibrated in accordance with manufacturer's instructions. ***If the pharmacy does not incubate samples and or/media-fills in-house, inspector should answer statement as N/A.***	Yes		6.1, 6.2.2, 6.3.2
53.4	Incubators used for environmental and personnel monitoring are monitored for temperature during incubation periods either manually or by use of a continuous recording device. ***Inspector note: Incubators store media at 20˚C-25˚C and 30˚C-35˚C. If the pharmacy has more than one incubator, review records for both incubators.*** ***View incubator temperature records to verify. Evaluate the size of the incubator and volume of media it can store. If the pharmacy does not incubate samples and/or media-fills in-house, inspector should answer statement as N/A.***	Yes	Reviewed incubator temperature records.	6.2.2, 6.3.2 Box 5
	Compounding Personnel Observation - Inspector ***must*** observe personnel performing compounding and related activities. This section will require the inspector to observe the staff while performing compounding and related activities. If the inspector is unable to view activities from a window or other observation area, it is expected they will gown/garb into compounding area. It is acceptable for pharmacy staff to perform mock compounding activities (with sterile saline or other drug) as long as all observations can be viewed.			
54.0	**Personnel Preparation Observation:** Before entering the compounding area, do compounding personnel remove any items that are not easily cleanable or are not necessary for compounding in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		3.1
54.1	All outer garments such as hats, scarves, sweaters, bandanas, vests, coats, and jackets are removed.	Yes		3.1

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
54.2	Makeup and/or cosmetics are removed.	Yes		3.1
54.3	All hand, wrist, and other exposed jewelry, including piercings such as earrings, lip or eyebrow piercings, etc. are removed and any jewelry that cannot be removed is covered.	Yes		3.1
54.4	Earbuds or headphones are removed.	Yes		3.1
54.5	Electronic devices that are not necessary for compounding or other required tasks are prohibited from entering the compounding areas.	Yes		3.1
54.6	Nails are kept clean and neatly trimmed.	Yes		3.1
54.7	Any nail polish, artificial nails, or extenders are removed.	Yes		3.1
54.8	If worn, eyeglasses are wiped. ***If none of the pharmacy staff wear glasses, inspector should answer statement as N/A.***	Yes		3.1
54.9	Any accommodations permitted by the designated person(s) have been documented. ***Inspector note: Per USP <797>, accommodations may be permitted as long as the quality of the CSP and environment will not be affected.***	Yes		3.1

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
55.0	**Hand Hygiene Observation:** Were compounding personnel entering the compounding area observed performing the appropriate hand washing procedures in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		3.2 Box 3
55.1	All personnel entering the compounding area performed hand hygiene.	Yes		3.2 Box 3
55.2	The order of hand washing was performed in the appropriate sequence in relation to the placement of the sink. ***Inspector note: If hand hygiene is completed outside of a classified area, alcohol-based hand rub must be used prior to donning garb.***	Yes		3.2 Box 3
55.3	Fingernails are cleaned under warm running water using a disposable nail cleaner (eg, nail pick). ***Inspector note: During observations, inspect whether nail picks are available for use when performing hand hygiene.***	Yes		3.2 Box 3
55.4	Brushes are not used for hand hygiene.	Yes	Brushes are no longer used after Florida BOP inspection.	3.2 Box 3
55.5	Hands and forearms are washed up to the elbows with soap and warm water for at least 30 seconds. ***Inspector note: Compounding personnel describe method for ensuring they have washed for 30 seconds (example: clock or timer is available near the sink).***	Yes		3.2 Box 3

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
58.5	Before any item is introduced into the PEC, it is wiped with sterile 70% IPA using sterile low-lint wipers and allowed to dry before use. ***Inspector note: Per USP, "When sterile items are received in sealed containers designed to keep them sterile until opening, the sterile items may be removed from the covering as the supplies are introduced into the ISO Class 5 PEC without the need to wipe the individual sterile supply items with sterile 70% IPA. The wiping procedure must not render the product label unreadable."***	Yes		8.2
58.6	Aseptic processes and manipulations are performed in a manner intended to minimize the risk of contamination. ***Inspector note: Observe the compounder's technique to ensure proper aseptic technique is utilized such as: preparation occurs in the direct compounding area (DCA); the compounder does not interrupt first air during the compounding process; proper set up of equipment, supplies, and components that ensure first air is not interrupted; the compounder handles the syringe in a manner that does not introduce contaminates (touch contamination on the plunger rod); proper entry and exit of materials in ISO Class 5 PEC; and frequent sanitization of gloves.***	Yes		2.3
58.7	All critical sites (eg, vial stoppers, ampule necks, and IV bag septums) are wiped with sterile 70% IPA in the PEC and allowed to dry before puncturing.	Yes		7, 8.3
58.8	Gloves are disinfected with sterile 70% IPA immediately before compounding and regularly throughout the compounding process. ***Inspector note: Per USP, best practice is to re-sanitize each time hands re-enter the PEC. This may not occur when compounder is staging the next batch.***	Yes		3.3

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
58.9	Gloves are regularly inspected for holes, punctures, or tears, and are replaced immediately if such defects are detected.	Yes		3.3
59.0	Do compounding personnel adhere to the USP established time limits for components after initial puncture or entry in compliance with USP <797> standards? ***Look at punctured, stored containers and confirm if puncture time or BUD is noted on the container and stored within time limits. If no, go to the compliance statements.***	Yes		15
59.1	Single dose containers (entered or punctured only in an ISO Class 5 air or cleaner air) are not used beyond 12 hours after initial puncture or entry or assigned BUD, whichever is shorter. ***Inspector note: This applies to conventionally manufactured single-dose vials, compounded single-dose CSPs used as components, and CSP stock solutions. The labeled storage requirements during that 12-hour period must be maintained. Additionally, per USP, "This time limit for entering or puncturing (a single-dose CSP or CSP stock solution) is not intended to restrict the BUD of the final CSP."***	Yes		15.1, 16.2
59.2	Multiple-use containers are not used for more than 28 days after initial puncture or entry, manufacturer specifications, or assigned BUD, whichever is shorter. ***Inspector note: This applies to conventionally manufactured multiple-dose vials and compounded multiple-dose CSPs used as components. Multiple-dose CSPs are required to meet the criteria for antimicrobial effectiveness testing (USP <51>) and must be stored under the conditions upon which its BUD is based (eg, refrigerator or controlled room temperature).***	Yes		14.5, 15.2, 16.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation*	Inspector Notes	USP Reference(s)
59.3	The remaining contents of opened single-dose ampules (or vials where container closure system has been removed) are discarded immediately. ***Inspector note: Ampules or vials where the container closure system has been removed must not be stored for any time period.***	Yes		15.1
59.4	Pharmacy bulk package containers of sterile drugs for parenteral use are only entered or punctured in an ISO Class 5 PEC. ***Inspector note: Per USP, the pharmacy bulk package system must be used according to the manufacturer's labeling.***	Yes		15.3
60.0	**Inspect several different finished compounded sterile preparations.** Are all the finished compounded sterile preparations free from any evidence of particulates, filaments, floaters, or signs of contamination? ***Inspector note: If found, request the compounded preparation to be quarantined and notify NABP immediately. Additionally, list the name(s) of the compounded preparation(s) observed; description of type of contamination suspected (eg, filament or floater); number of preparations affected (eg, two of the five vials on the shelf); lot or batch information; BUD assigned; and collect photographs, copy of MFR, and CR.***	Yes		12

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
61.0	Are there procedures for in-process checks performed by a pharmacist? ***Inspector note: In-process checks are safety steps for complex, multi-step compounding processes or high risk drugs or high risk populations (eg, neonates).*** ***These checks indicate that appropriate procedures and packaging are followed for each step, including addressing pharmacist verification of steps performed by non-pharmacists and visual inspection of product. Documentation of the compounding accuracy is recommended to be performed by someone other than the compounder to ensure proper measurement, reconstitution, and component usage. Some checks may be done retrospectively and with the assistance of technology.***	Yes		2 Table 2, Table 3
62.0	**Cleaning and Disinfection Observation:** Does the pharmacy perform cleaning and disinfection activities in compliance with USP <797> standards? ***If inspector is unable to observe cleaning activities (due to timing of compounding activities observed), inspector should interview compounder(s) to have them walk through their normal process. If this occurs, inspector should record in notes column "process only."*** ***If no, go to compliance statements.***	Yes		7
62.1	All cleaning and disinfection activities are performed by appropriately garbed personnel.	Yes		7
62.2	Cleaning and disinfection are performed on all surfaces in the classified area and SCA.	Yes		7

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
62.8	Compounding personnel are using the appropriate cleaning and disinfecting procedures and techniques within the PEC. ***Inspector note: Per USP, "All cleaning, disinfecting, and application of sporicidal disinfectants must be documented according to the facility's SOPs"; "Cleaning must be performed in the direction of clean to dirty areas"; and when 70% sterile IPA is used, it is used last and allowed to dry. There are differing opinions on the best order of cleaning. Procedure includes using a sterile low-lint wiper to all surfaces. Allow surfaces to dry completely before beginning compounding.***	Yes		7.1.2 Box 7, Box 8
62.9	The manufacturer's directions or published data for the minimum contact time is followed for each of the cleaning, disinfecting, and sporicidal disinfectant used. ***Per USP, contact times should be included in the SOP based on the agent used.***	Yes		7.1.1 Box 7, Box 8
62.10	Sterile 70% IPA is applied to all surfaces in the ISO Class 5 PEC at the frequencies specified by USP during active compounding. ***Inspector note: Per USP <797>, sterile 70% IPA must be applied: immediately before initiating compounding procedures, to the work surface of the PEC at least every 30 minutes (if the compounding process takes 30 minutes or less), to the work surface of the PEC immediately after compounding (when the compounding process takes more than 30 minutes), after each batch or lot is completed, and after cleaning and disinfecting.***	Yes		7

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
65.1	Sterilization by filtration is performed in an ISO 5 environment.	Yes		4.1.2, 10.2
65.2	Filters used have enough capacity to filter the required volumes. ***Inspector note: Per USP, "The filter dimensions and the CSP to be sterilized by filtration should permit the sterilization process to be completed without the need for replacement of the filter during the process."***	Yes		10.2
65.3	The 0.2 micron sterile micro-porous membrane filter used to sterilize CSP solutions is chemically and physically compatible with the CSP. Inspector note: Per USP <797>, sterilizing filters must be appropriate for pharmaceutical use. Sterilizing filters labeled "for laboratory use" or equivalent must not be used. "Sterilizing filters must be certified by the manufacturer to retain at least 107 microorganisms of a strain of Brevundimonas diminuta per square centimeter of upstream filter surface area under conditions similar to those in which the CSPs will be filtered (ie, pressure, flow rate, and volume filtered)."	Yes		10.2
65.4	Confirmation of filter integrity (bubble testing) is performed and documented for each filter used with each batch sterilized by filtration. ***Inspector note: If multiple filters are required for the compounding process, each of the filters must be tested.*** ***If no, collect a copy of the master formulation record and compounding record.***	Yes		10.2

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
66.1	The pharmacy has evaluated if steam sterilization would cause degradation of the drug. ***Inspector note: Per USP, compounded preparations that are degraded by moisture, pressure, or temperatures used may not be sterilized by steam heat.***	N/A		10.3
66.2	Steam supplied is free of contaminants and generated using water per manufacturer's specifications.	N/A		10.3
66.3	Solutions are passed through a 1.2 micron or smaller filter into the final containers to remove particulates before sterilization.	N/A		10.3
66.4	Items are placed in the autoclave in a manner that allows steam to reach them without entrapment of air. ***Inspector note: The pharmacy should have the autoclave cycle validated for the size of the batch, sterilization temperature, and sterilization time to ensure the load will be sterile.***	N/A		10.3 USP <1229.1>
66.5	Sealed containers used are able to generate steam internally (eg, small amount of water in empty crimped vials).	N/A		10.3

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

[redacted] Sterile Compounding Inspection for USP <797> [redacted]

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
66.6	The appropriate biological indicators (USP <1229>) are used to verify the effectiveness of each sterilization run or load and documented in the compounding record. ***Inspector note: Per USP <797>, "The effectiveness of steam sterilization must be verified and documented with each sterilization run or load by using appropriate biological indicators, such as spores of Geobacillus stearothermophilus (ATCC 12980, ATCC 7953, or equivalent; see Biological Indicators for Sterilization USP <1229.5>), and other confirmation methods such as physicochemical indicators (see Physicochemical Integrators and Indicators for Sterilization USP <1229.9>). The date, run, and load numbers of the steam sterilizer used to sterilize a CSP is documented in the compounding record."***	N/A		10.3 USP <1229.5> USP <1229.9>
66.7	All items are directly exposed to steam under adequate pressure for the length of time necessary as determined by use of appropriate biological indicators to render the items sterile. ***Inspector note: Per USP <797>, the duration of the exposure period must include sufficient time for the entire contents of the CSP and other items to reach the sterilizing temperature. The CSP and other items must remain at the sterilizing temperature for the duration of the sterilization period (an example provided in the chapter is 20-60 minutes at 121°C saturated steam under a pressure of 15 psi, depending on the volume or size of the CSP being sterilized).*** ***Any parameters for the autoclave must be set through validation.***	N/A		10.3 USP <1229.1>
66.8	A calibrated data recorder or chart is used to monitor each cycle and to examine for cycle irregularities (eg, deviations in temperature or pressure) and results documented on the CR.	N/A		10.3, 20

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
67.0	**Dry Heat Sterilization:** Does the pharmacy use the appropriate type of sterilization method, equipment, documentation, and testing in compliance with USP <797> standards? ***Inspector note: The sterilization method used must sterilize the CSP without degrading its physical and chemical stability (eg, affecting its strength, purity, or quality) or the packaging integrity. USP <1229.8> also applies.*** ***View documentation on compounding records for CSPs sterilized by dry heat to confirm. If no, go to compliance statements.*** ***If the pharmacy does not use this sterilization method, inspector should answer question as N/A.***	N/A		10.4 USP <1229.8>
67.1	The pharmacy has the appropriate dry heat sterilization equipment. ***Inspector note: Dry heat sterilization is usually performed in an oven designed for sterilization at 160°C or higher. The dry heat oven should be able to get to the appropriate temperature and pressure, for example, not be a toaster oven.***	N/A		10.4
67.2	Solutions are passed through a 1.2 micron or smaller filter into the final containers to remove particulates before sterilization.	N/A		10.4
67.3	During sterilization, sufficient space is left between materials to allow for circulation of hot air.	N/A		10.4
67.4	CSPs and other items are exposed to dry heat for the length of time necessary for all items to reach sterilizing temperature of 160°C or higher. ***Inspector note: Per USP <797>, if lower temperatures are used, they are validated by biological indicators (see USP <1229.8>, Validation of Dry Heat Sterilization, Biological Indicators). The calibrated oven must be equipped with temperature controls and a timer.***	N/A		10.4

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
68.2	The effectiveness of the dry heat depyrogenation cycle is established and documented. ***Inspector note: Per USP <797>, this must be done initially, re-established any time there are changes made to the cycle (eg, load conditions, duration, temperature), and verified at least annually by using endotoxin challenge vials (ECVs) to demonstrate that the cycle is capable of achieving a ≥ 3-log reduction in endotoxins (see Bacterial Endotoxins Test USP <85>). The verification must be documented.***	N/A		10.1 USP <1228.1> USP <85>
68.3	Items that are not thermostable are depyrogenated by multiple rinses with sterile, nonpyrogenic water (eg, sterile water for injection or sterile water for irrigation) and then thoroughly drained or dried immediately before use in compounding. ***Inspector note: USP <1228.4> Depyrogenation by Rinsing also applies.***	N/A		10.1 USP <1228.4>
	Master Formulation and Compounding Records Inspector should review a minimum of five (5) master formulation records and five (5) compounding records.			11
69.0	Are **Master Formulation Records (MFRs)** created and maintained in compliance with USP <797> standards? ***If no, go to the compliance statements.***	Yes		11.1
69.1	The pharmacy creates and maintains MFRs for CSPs that are prepared for more than one patient.	Yes		11.1, 20
69.2	MFR changes and alterations are approved and documented according to the pharmacy's SOPs.	Yes		11.1
69.3	The pharmacy creates and maintains MFRs for CSPs that are prepared from nonsterile ingredients.	Yes		11.1, 20

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
74.0	Does the pharmacy ensure the assigned BUD does not exceed the shortest beyond use date of any individual compounded components? ***Inspector note: Per USP, "the BUD should generally not exceed the shortest BUD of any of the individual compounded components. However, there may be acceptable instances when the BUD of the final CSP exceeds the BUD assigned to compounded components (eg, pH-altering solutions). If the assigned BUD of the final CSP exceeds the BUD of the compounded components, the physical, chemical, and microbiological quality of the final CSP must not be negatively impacted." Other examples where this may occur: formula within a formula, preservative-free compounded component used in a preserved final CSP, "in-use" times for pharmacy bulk packages, and cyclosporine ophthalmic stock solution.*** ***If no, inspector should describe the observations, including the name of the component whose BUD was shorter than the assigned BUD of the final CSP.***	Yes		14.3
75.0	Are BUDs for **Category 3 CSPs** assigned in compliance with all conditions outlined in USP <797> standards and do not exceed the maximum limits established in Table 14? ***Inspector note: If all of the conditions described for Category 3 CSPs are not met, the applicable BUD must not exceed the established maximum limits in Table 13 for Category 2 CSPs.*** ***If no, go to compliance statements.*** ***If the pharmacy does not prepare Category 3 CSPs, Inspector should answer question as N/A.***	N/A		14.3, 14.4., 14.4.1, 14.4.2, 14.4.3, 14.4.4, Table 14
75.1	The assigned BUD does not exceed the shortest expiration date of any of the individual starting components.	N/A		14.3 Table 14

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
75.5	**Category 3 CSPs** are supported by stability data obtained using methods described in USP <1225> or a validated noninferior stability-indicating analytical method. ***Inspector note: Per USP <797>, Category 3 CSPs must prepared according to the EXACT formulation (API and other ingredients of identical grade and procedures) from which the stability data is derived. Category 3 CSPs must be packaged and stored in container closure of the same materials of composition as used in study and the facility must have documentation of the stability study.*** ***View records to verify the preparation exactly matches the preparation cited in the documentation including concentration of all active ingredients, excipients, etc.***	N/A		14.4.3 Table 14 USP <1225>
75.6	**Category 3 CSPs** undergo sterility testing. ***Inspector note: Sterility testing is performed on all Category 3 CSPs.***	N/A		14.4.4 Table 14 USP <71>
75.7	**Category 3 CSPs** undergo bacterial endotoxin testing. ***If all compounds prepared are ophthalmics and/or drug administered by inhalation, bacterial endotoxin is not required, inspector should answer statement as N/A.***	N/A		12.3, 14.4.4 Table 14 USP <85>
75.8	**Category 3 CSPs** undergo particulate matter testing. ***Inspector note: If the Category 3 CSP is an injection or an ophthalmic solution, particulate matter testing is also conducted once per formulation with acceptable results (See USP <788> Particulate Matter in Injections and USP <789> Particulate Matter in Ophthalmic Solutions).***	N/A		14.4.3 Table 14 USP <788>, <789>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
75.9	**Category 3 CSPs** undergo an evaluation for the container closure system. ***Inspector note: The container closure system used is evaluated for and conforms to container closure integrity to the end of the BUD (see USP <1207> Package Integrity Evaluation—Sterile Products). Evaluation must be done once for each formulation and for each container closure system in which it will be packaged.***	N/A		14.4.3 Table 14 USP <1207>
76.0	Are **multiple-dose CSPs prepared** in compliance with USP <797> standards? ***If no, go to compliance statements.*** ***If the pharmacy does not prepare multiple-dose CSPs, inspector should answer question as N/A.***	Yes		14.5
76.1	Multiple-dose CSPs are prepared as a Category 2 or Category 3 CSP only.	Yes		14.5
76.2	When preservatives are used, they are appropriate for the CSP formulation and the route of administration. Inspector note: Per USP <797>, "The preservative must not be inactivated by any ingredients in the CSP, and some preservatives are not always appropriate for the patient (eg, neonates) or route of administration (eg, intrathecal or ophthalmic injection)."	Yes		14.5

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
76.3	Aqueous multiple-dose CSPs pass antimicrobial effectiveness testing in accordance with USP <51>. ***Inspector note: Per USP <797>, a test can be one test done for each formulation in the particular container-closure system in which it will be packaged, or test results provided by an FDA-registered facility or in appropriate peer-reviewed literature,, provided the sterile compounded preparation formulation and container-closure system used are exactly the same as those tested, unless a bracketing study is performed. The concentration of all other ingredients (including preservatives) must be the same throughout the bracketing study. Additionally, multiple-dose, nonpreserved, aqueous topical, and topical ophthalmic CSPs prepared as a Category 2 or Category 3 CSP are not required to pass antimicrobial effectiveness testing if the preparation is: For use by a single patient, labeled (in the label or labeling) to indicate that, once opened, it must be discarded after 24 hours when stored at controlled room temperature and/or that, once opened, it must be discarded after 72 hours when stored under refrigeration.***	Yes		14.5 USP <51>
76.4	Multiple-dose CSPs are labeled to indicate the beyond use date of the CSP once it is opened or punctured. ***Inspector note: Labeling on the CSP should indicate that once the CSP container is entered or punctured, it must not be used for longer than the assigned BUD or 28 days (if supported by antimicrobial effectiveness testing results), whichever is shorter.*** ***Inspector should review the CR or final compounded preparation to verify the label contains this information.***	Yes		14.5
76.5	Container-closure systems used are evaluated for maintaining integrity (USP <1207>) for each formulation and fill volume. ***Inspector note: Per USP <797>, the container closure integrity test needs to be conducted only once on each formulation and on fill volume in the particular container closure system in which the multiple-dose CSP will be packaged.***	Yes		14.5 USP <1207>

		Observation	Inspector Notes	USP Reference(s)
	Finished Preparation Release Checks and Tests			12
77.0	Are all CSPs visually inspected for quality prior to release or dispensing in compliance with USP <797> standards? ***If no, go to compliance statements.***	Yes		12.1
77.1	The CSP label is visually inspected to confirm that the CSP and its labeling match the prescription or medication order.	Yes		12.1
77.2	CSPs are visually inspected for quality characteristics such as discoloration, visible particulates, or cloudiness.	Yes		12.1
77.3	CSPs are visually inspected to verify container closure integrity (eg, checking for leakage, cracks in the container, or improper seals).	Yes		12.1
77.4	A visual inspection is also repeated prior to release or dispense for CSPs that have been stored in the pharmacy and not released or dispensed on the day of preparation.	Yes		12.1

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
78.3	Pharmacy is utilizing an alternative method for sterility assurance testing (other than USP <71>). ***Inspector note: Per USP, "If an alternative method is used for sterility testing, the method must be validated (see USP <1223>) and demonstrated to be suitable for that CSP formulation."*** ***If an alternative method is used, describe the method used and how the pharmacy ensures they are compliant with state-specific regulations.***	N/A		12.2 USP <71>, <1223>
78.4	When sterility testing identifies a failure, the pharmacy has processes to investigate and identify any contributing factors. ***Inspector note: Per USP, "Sterility tests resulting in failures must prompt an investigation into the possible causes and must include identification of the microorganism, as well as an evaluation of the sterility testing procedure, compounding facility, process, and/or personnel that may have contributed to the failure. The source(s) of the contamination, if identified, must be corrected, and the facility must determine whether the conditions causing the sterility failure affect other CSPs. The investigation and resulting corrective actions must be documented." Additionally, some rapid sterility test methods do not allow for the identification of the recovered microorganisms. If one of these methods is used, the pharmacy is not in compliance with the chapter, as the investigation must include identification of the recovered microorganism.***	Yes		12.2

Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
82.5	The record of each complaint is maintained by the pharmacy regardless of the source of the complaint (eg, email, telephone, or mail) and includes the minimum required information. ***Inspector note: Per USP <797>, the complaint record must contain the following information:*** ***-Name of the complainant or other unique identifier;*** ***-Date the complaint was received;*** ***-Nature of the complaint;*** ***-The response to the complaint; and*** ***-Results of any investigation and any follow-up.*** ***In addition, to the extent that the information is known, the following should be recorded:*** ***-The name and strength of the CSP and the assigned internal identification number (eg, prescription, order, or lot number).*** ***If no, inspector should document what is missing in the notes column.***	Yes		18.2, 20
82.6	The pharmacy's QA/QC program includes documentation of steps necessary for completing a recall, including reporting the recall to appropriate regulatory agencies. ***Inspector note: Per USP, "The recall must be reported to appropriate regulatory bodies as required by laws and regulations of the applicable regulatory jurisdiction."***	Yes		18.1, 18.2

Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

National Association of Boards of Pharmacy®
Verified Pharmacy Program® Inspection Form

Sterile Compounding Inspection for USP <797>

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Inspector Notes	USP Reference(s)
83.0	If a CSP is dispensed or administered **before the results of release testing are known**, does the pharmacy ensure procedures for recalls and out-of-specification notifications are conducted and documented in compliance with USP <797> standards? ***Inspector note: Per USP <797>, if a CSP is dispensed or administered before the results of release testing are known, the facility must have procedures in place to notify, recall, and investigate.*** ***If no, go to the compliance statements.***	Yes		18.1, 20
83.1	The pharmacy has a process in place to immediately notify the prescriber of a failure of specifications with the potential to cause patient harm (eg, sterility, strength, purity, bacterial endotoxin, or other quality attributes).	Yes		18.1
83.2	The pharmacy has a process in place to recall any unused dispensed CSPs and quarantine any stock remaining in the pharmacy.	Yes		18.1
83.3	The pharmacy has a process in place to investigate if other lots are affected and recall if necessary.	Yes		18.1

Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.
- Recommend also pulling supervising personnel file.
- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).

Review five (5) personnel files and document your observations. (For applicants seeking a Class E-S Non-Resident Sterile Compounding Inspection (Texas Sampling), review a total of 10 personnel records.)
- *Note: long-term employees may not have initial training available. If this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.

Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions

1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position.
2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency.
3. Select the appropriate response for each item reviewed.
-Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards.
-Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column.
-Select "Missing" if the document is not present in the file.
-Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column.
4. Use the notes column to document any pertinent information.

Demonstrating Knowledge and Competency of Core Skills (Section 2.1)

USP requirements:
1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2).
2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas:
-Hand hygiene
-Garbing
-Cleaning and disinfection
-Calculations, measuring, and mixing
-Aseptic technique
-Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components)
-Use of equipment
-Documentation of the compounding process (eg, master formulation and compounding records)
-Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area
-Proper use of PECs
-Principles of movement of materials and personnel within the compounding area
3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3).
4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3).
5. All training and evaluations must be documented.

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Compounding SOPs	*Initial Training and Competency in Maintaining the Quality of the Environment	*Initial Training and Competency in Sterile Compounding Principles and Practices	Ongoing Training and Competency in Sterile Compounding Principles and Practices	Notes
				Compounders and Supervising Personnel: Initially and at least every 12 months Other Personnel (examples: persons who do not compound but clean/disinfect and restock or who perform in-process checks; persons who only compound immediate use): Initially and as defined by pharmacy SOPs				
#1	Pharmacist	Designated Person	Category 2 only	Yes	Yes	Yes	Yes

Inspector Instructions	Hand Hygiene and Garbing Competency Evaluation (Section 2.2)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information.	USP requirements: 1.The garbing and hand hygiene competency evaluation consists of a visual observation and gloved fingertip and thumb sampling (GFT) of both hands. 2.The initial competency evaluation consists of three (3) separate and complete hand hygiene observation, followed by a full garbing procedure and a GFT after garbing. The initial three (3) successful completions must be in succession—failure of any of the three (3) initial garbing competency evaluations requires repeat testing until personnel successfully complete three (3) evaluations in a row. 3.The pharmacy uses a microbiological growth media device (eg, plates, paddles, or slides) containing general microbial growth agar (eg, trypticase soy agar [TSA]) supplemented with neutralizing additives (eg, lecithin and polysorbate 80) that supports both bacterial and fungal growth. 4.The media device is incubated at 30°C-35°C for no less than 48h and then at 20°C-25°C for no less than an additional five days. 5.Failure is indicated by visual observation of improper hand hygiene and garbing procedures and/or GFT results that exceed the defined action levels. Action level after garbing: >0 cfu/total from both hands. 6.Documentation includes, at minimum: -Name of the person evaluated -Evaluation date and time -Media and components used including manufacturer, expiration date, and lot number -Starting temperature for each interval of incubation -Dates of incubation -Results (the number of cfu per hand must be recorded; microbial identification of the cfu is not required by the chapter for GFT) -Results of the evaluation and any corrective actions -Name of the observer and personnel reading and documenting the results

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Hand Hygiene and Garbing Visual Observation	Initial GFT x 3 (Post hand washing and garbing)	Subsequent GFT (Post handwashing and garbing)	Documented Failures and Retraining Needs (If none, please mark as N/A)	Notes
				Category 1 and 2 compounders: Initially and at least every 6 months Category 3 compounders: Initially at least every 3 months Supervising Personnel: Initially and at least every 12 months

Inspector Instructions
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information. 5. Document in notes if initial aseptic manipulation competencies are present in files (*unless long-term employee).

Aseptic Manipulation Competency (Section 2.3)
USP requirements: 1. Media-fill testing procedures simulate the most difficult compounding procedures encountered by personnel. 2. The pharmacy conducts media-fill testing as described in Box 2. 3. The final containers are incubated at 20°C-25°C and 30°C-35°C for a minimum of seven days at each temperature band. 4. Failure is indicated by visible turbidity or other visual manifestations of growth in the media in one or more container closure unit(s) on or before 14 days. 5. Immediately following the media-fill test, GFT is performed on both hands and inside of an ISO Class 5 PEC. Failure is indicated by visual observation of GFT results that exceed defined action levels. Action level after media-fill testing: >3 cfu/total from both hands. 6. Immediately following the GFT, a surface sample of the direct compounding area inside the PEC is performed in accordance with USP standards for surface sample monitoring and action levels. Action level ISO Class 5: >3 cfu/media device. 7. Failure in the media fill, GFT, or surface sampling constitutes an overall failure of the aseptic manipulation competency. 8. Documentation includes, at minimum: -Name of the person evaluated -Evaluation date and time -Media and components used including manufacturer, expiration date, and lot number -Starting temperature for each interval of incubation -Dates of incubation -Results (for GFT, the number of cfu per hand must be recorded and for surface samples, the number of cfu per sample must be recorded. Note: microbial identification of the cfu is not required for media-fill testing) -Results of the evaluation and any corrective actions -Name of the observer and personnel reading and documenting the results

Employee Record #	Employee Title	Personnel Function	CSP Category Type	Aseptic Manipulation Visual Observation	Media-fill	GFT (post media-fill)	Surface Sampling (post media-fill)	Documented Failures and Retraining Needs (If none, please mark as N/A)	Notes

GLOSSARY/USP<797>
ACD: Automated compounding device.
ACPH: Air changes per hour.
Active pharmaceutical ingredient (API): Any substance or mixture of substances intended to be used in the compounding of a preparation, thereby becoming the active ingredient in that preparation and furnishing pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease in humans and animals or affecting the structure and function of the body. Also referred to as *Bulk drug substance*. A conventionally manufactured drug product is not an API but is typically manufactured from an API(s).
Added substance: An ingredient that is necessary to compound a preparation but is not intended or expected to cause a pharmacologic response if administered alone in the amount or concentration contained in a single dose of the compounded preparation. The term is used synonymously with the terms *inactive ingredient, excipient, and pharmaceutical ingredient.*
Administration: The direct application of a sterile product or preparation to a single patient by injecting, infusing, or otherwise providing a sterile product or preparation in its final form.
Airlock: A space with interlocked doors, constructed to maintain air pressure control when items move between two adjoining areas (generally with different air cleanliness standards). The intent of an airlock is to prevent ingress of particulate matter and microbial contamination from a lesser-controlled area.
Alcohol-based hand rub: An alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands of health care personnel to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients, excipients, and humectants.
Allergenic extract compounding area (AECA): A designated space, area, or room that is not required to be classified, with a visible perimeter that is suitable for preparation of allergenic extract prescription sets.
Allergenic extract prescription set: Combinations of licensed allergenic extracts that would be mixed and diluted to provide subcutaneous immunotherapy to an individual patient, even though these allergenic extract combinations are not specified in the approved BLAs for the licensed biological products.
Allergenic extract: A biological substance used for the diagnosis and/or treatment of allergic diseases such as allergic rhinitis, allergic sinusitis, allergic conjunctivitis, bee venom allergy, and food allergy.
Anteroom: An ISO Class 8 or cleaner room with fixed walls and doors where personnel hand hygiene, garbing procedures, and other activities that generate high particulate levels may be performed. The anteroom is the transition room between the unclassified area of the facility and the buffer room.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Aseptic processing: A method by which separate, sterile components (eg, drugs, containers, or closures) are brought together under conditions that maintain their sterility. The components can either be purchased as sterile or, when starting with nonsterile components, can be separately sterilized prior to combining (eg, by membrane filtration or by autoclave).
Aseptic technique: A set of methods used to keep objects and areas free of microorganisms and thereby minimize infection risk to the patient. It is accomplished through practices that maintain the microbe count at an irreducible minimum.
Assigned trainer: One or more individuals assigned by the designated person(s) to be responsible and accountable for directly providing the training, observation, and/or evaluation of personnel for the preparation of CSPs.
Batch: More than one CSP prepared as described in the MFR in a single, discrete process, and expected to have uniform character and quality, within specified limits.
Beyond-use date (BUD): The date, or the hour and date, after which a CSP must not be used, stored, or transported. The date is determined from the date and time the preparation is compounded.
Biological safety cabinet (BSC), Class II: A ventilated cabinet with an open front and inward and downward unidirectional HEPA-filtered airflow and HEPA-filtered exhaust. A BSC used to prepare a CSP must be capable of providing an ISO Class 5 or better environment for preparation of the CSPs.
Biological safety cabinet (BSC): A ventilated cabinet that may be used for compounding. These cabinets are divided into three general classes (Class I, Class II, and Class III). Class II BSCs are further divided into types (Type A1, Type A2, Type B1, Type B2, and Type C1).
BLA: Biological license application.
Blood components: Any therapeutic constituent of blood separated by physical or mechanical means (eg, white cells, red cells, platelets, plasma, serum). It is not intended to include plasma-derived products (eg, albumin, coagulation factors, immunoglobulins) manufactured under an approved BLA or equivalent.
BMBL: Biosafety in Microbiological and Biomedical Laboratories.
Buffer room: An ISO Class 7 or cleaner room with fixed walls and doors where PEC(s) that generate and maintain an ISO Class 5 environment are physically located. The buffer room may only be accessed through the anteroom or another buffer room.
Bulk drug substance: See the entry for *Active pharmaceutical ingredient.*

NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
Category 1 CSP: A CSP that is assigned a BUD of 12 hours or less at controlled room temperature or 24 hours or less refrigerated that is compounded in accordance with all applicable requirements for Category 1 CSPs in this chapter.
Category 2 CSP: A CSP that may be assigned a BUD of greater than 12 hours at controlled room temperature or greater than 24 hours refrigerated that is compounded in accordance with all applicable requirements for Category 2 CSPs in this chapter.
Category 3 CSP: A CSP that may be assigned a BUD exceeding the limits in *Table 13* for Category 2 CSPs and is compounded in accordance with all applicable requirements for Category 3 CSPs in this chapter.
CDC: Centers for Disease Control and Prevention.
Certificate of analysis (COA): A report from the supplier of a component, container, or closure that accompanies the supplier's material and contains the specifications and results of all analyses and a description of the material.
CFU: Colony-forming units.
Classified area: An area that maintains an air quality classification based on the ISO standards required in this chapter (see also the definition for *ISO class).*
Cleaning agent: An agent, usually containing a surfactant, used for the removal of substances (eg, dirt, debris, microbes, and residual drugs or chemicals) from surfaces.
Cleaning: The process of removing substances (eg, organic and inorganic material) from objects and surfaces, normally accomplished by manually or mechanically using water with detergents or enzymatic products.
Cleanroom suite: A classified area that consists of both an anteroom and buffer room.
Component: Any ingredient used in the compounding of a preparation, including any active ingredient, added substance, or conventionally manufactured product.
Compounded sterile preparation (CSP): A preparation intended to be sterile that is created by combining, admixing, diluting, pooling, reconstituting, repackaging, or otherwise altering a drug product or bulk drug substance.
Compounded stock solution: A sterile mixture of components that is used to compound additional CSPs.
Compounding area: The area where compounding is occurring (ie, a cleanroom suite, inside the perimeter of the SCA, or AECA).

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
Compounding aseptic containment isolator (CACI): A type of RABS that uses HEPA filtration to provide an ISO Class 5 unidirectional air environment designed for the compounding of sterile HDs.
Compounding aseptic isolator (CAI): A type of RABS that uses HEPA filtration to provide an ISO Class 5 unidirectional air environment designed for compounding of sterile non-HDs.
Compounding record (CR): Documents the compounding of each CSP.
Compounding: The process of combining, admixing, diluting, pooling, reconstituting, repackaging, or otherwise altering a drug product or bulk drug substance to create a sterile preparation.
Container closure system: Packaging components that together contain and protect the dosage form. This includes primary packaging components and secondary packaging components, if the latter are intended to provide additional protection.
Containment glove bag: A single-use disposable glove bag that is capable of containing airborne chemical particles.
Containment ventilated enclosure (CVE): A non-ISO classified full or partial enclosure that uses ventilation principles to capture, contain, and remove airborne contaminants through HEPA filtration and prevent their release into the work environment.
Conventionally manufactured product: A pharmaceutical dosage form, usually the subject of an application approved by the applicable national regulatory agency, that is manufactured under current good manufacturing practice conditions.
Critical site: A location that includes any component or fluid pathway surfaces (eg, vial septa, injection ports, and beakers) or openings (eg, opened ampules and needle hubs) that are exposed and at risk of direct contact with air (eg, ambient room or HEPA filtered), moisture (eg, oral and mucosal secretions), or touch contamination.
Designated person(s): One or more individuals assigned to be responsible and accountable for the performance and operation of the facility and personnel as related to the preparation of CSPs.
Direct compounding area (DCA): A critical area within the ISO Class 5 PEC where critical sites are exposed to unidirectional HEPA-filtered air, also known as first air.
Disinfectant: A chemical or physical agent used on inanimate surfaces and objects to destroy fungi, viruses, and bacteria. Sporicidal disinfectants are considered a special class of disinfectants that also are effective against bacterial and fungal spores.
Dynamic airflow smoke pattern test: A PEC test in which a visible source of smoke, which is neutrally buoyant, is used to observe air patterns within the unidirectional space (i.e., the DCA) under dynamic operating conditions (see the entry for *Dynamic operating conditions).* This test is not appropriate for ISO Class 7 or ISO Class 8 cleanrooms that do not have unidirectional airflow (see the entry for *Visual smoke study).*

NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
Dynamic operating conditions: Conditions in the compounding area in which operating personnel are present and simulating or performing compounding. The conditions should reflect the largest number of personnel and highest complexity of compounding expected during routine operations as determined by the designated person(s).
ECV: Endotoxin challenge vial.
EPA: US Environmental Protection Agency.
Excipient: See the entry for *Added substance*.
FDA: US Food and Drug Administration.
Filter integrity test: A test (eg, bubble point test) of the integrity of a sterilizing-grade filter performed after the filtration process to detect whether the integrity of the filter has been compromised.
Final yield: The total number of containers prepared at the end of the compounding process prior to release testing.
First air: The air exiting the HEPA filter in a unidirectional air stream.
Formulation: The specific qualitative and quantitative composition of the final CSP.
Garb: Items such as gloves, garments (eg, gowns), shoe covers, head and facial hair covers, masks, and other items designed to reduce particle shedding from personnel and minimize the risk of contamination of CSP(s).
GFT: Gloved fingertip and thumb testing.
Hazardous drug (HD): Any drug identified by at least one of the following six criteria: carcinogenicity, teratogenicity or developmental toxicity, reproductive toxicity in humans, organ toxicity at low dose in humans or animals, genotoxicity, or new drugs that mimic existing HDs in structure or toxicity.
High-efficiency particulate air (HEPA) filtration: Being, using, or containing a filter designed to remove 99.97% of airborne particles measuring 0.3-micron or greater in diameter passing through it.
HVAC: Heating, ventilation, and air conditioning.
Integrated vertical laminar flow zone (IVLFZ): A designated ISO Class 5 area serving as the PEC within an ISO Class 7 or cleaner buffer room. In the IVLFZ, unidirectional airflow is created by placing HEPA filters over the entire surface of the worktables and by effective placement of air returns.
IPA: Isopropyl alcohol.

GLOSSARY USP <797>
ISO class: An air-quality classification from the International Organization for Standardization.
ISO: International Organization for Standardization.
Label: The part of the labeling on the immediate container.
Labeling: All labels and other written, printed, or graphic matter on the immediate container or on or inside any packaging system or wrapper in which the article is enclosed, except any outer shipping container.
Laminar airflow system (LAFS): A device or zone within a buffer room that provides an ISO Class 5 or better air quality environment for sterile compounding. The system provides a unidirectional HEPA-filtered airflow.
Laminar airflow workbench (LAFW): A device that is a type of LAFS that provides an ISO Class 5 or better air quality environment for sterile compounding. The device provides a unidirectional HEPA-filtered airflow.
Line of demarcation: A visible line on the floor that separates the clean and dirty sides of the anteroom.
Low-lint wiper: A wiper exhibiting few, if any, fibers or other contamination, visible without magnification, which is separate from or easily removed from the wiper material in a dry condition.
Master formulation record (MFR): A detailed record of procedures that describes how the CSP is to be prepared.
MEA: Malt extract agar.
Media-fill test: A simulation used to qualify processes and personnel engaged in sterile compounding to ensure that the processes and personnel are able to prepare CSPs without contamination.
Monograph: A quality documentary standard within *USP–NF* that articulates the quality expectations for a medicine including for its identity, strength, purity, and performance. It also describes the tests to validate that a medicine and its ingredients meet these criteria.
Multiple-dose container: A container of sterile product for parenteral administration (eg, injection or infusion) that is designed to contain more than one dose of the sterile product. A multiple-dose container is usually required to meet the antimicrobial effectiveness testing criteria. See <659>Injection Packaging Systems, Multiple-dose container.
One-step disinfectant cleaner: A product with an EPA-registered (or equivalent) claim that it can clean and disinfect a nonporous surface in the presence of light to moderate organic soiling without a separate cleaning step.

GLOSSARY USP<797>
Oversight: The review, monitoring, and supervision of actions taken by personnel, bearing responsibility for those actions, and being available for consultation if and when needed, even if not physically present.
Pass-through chamber: An enclosure with sealed doors on both sides that should be interlocked. The pass-through chamber is positioned between two spaces for the purpose of minimizing particulate transfer while moving materials from one space to another.
Perimeter: A visible demarcation (such as a door, walls, or visible marking on the floor) that defines the SCA or AECA.
Pharmaceutical isolator: An enclosure that provides HEPA-filtered ISO Class 5 unidirectional air operated at a continuously higher pressure than its surrounding environment and is decontaminated using an automated system. It uses only decontaminated interfaces or rapid transfer ports for materials transfer. [Note—A CAI or CACI is not a pharmaceutical isolator.]
Pharmacy bulk package: A conventionally manufactured sterile product for parenteral use that contains many single doses intended for use in a pharmacy admixture program. A pharmacy bulk package may either be used to prepare admixtures for infusion or, through a sterile transfer device, for filling sterile containers. See <659>*Injection Packaging Systems, Pharmacy bulk package*.
Positive-pressure room: A room that is maintained at higher pressure than the adjacent spaces, and therefore the net airflow is out of the room.
PPE: Personal protective equipment.
Preservative: A substance added to inhibit microbial growth.
Primary engineering control (PEC): A device or zone that provides an ISO Class 5 air quality environment for sterile compounding.
Probability of a nonsterile unit (PNSU): The probability of an item being nonsterile after it has been exposed to a verified sterilization process. A PNSU value can only be applied to terminal sterilization. [Note—This is also called the sterility assurance level (SAL).]
Pyrogen: A substance that induces a febrile reaction in a patient.
Quality assurance (QA): A system of procedures, activities, and oversight that ensures that the compounding process consistently meets quality standards.
Quality control (QC): The sampling, testing, and documentation of results that, taken together, ensure that specifications have been met before release of the CSP.
Reconstitution: The process of adding a diluent to a conventionally manufactured product to prepare a sterile solution or suspension.
Release inspection and testing: Visual inspection and testing performed to ensure that a preparation meets appropriate quality characteristics.

NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP<797>
Repackaging: The act of removing a sterile product or preparation from its original primary container and placing it into another primary container, usually of smaller size without further manipulation.
Restricted-access barrier system (RABS): An enclosure that provides HEPA-filtered ISO Class 5 unidirectional air that allows for the ingress and/or egress of materials through defined openings that have been designed and validated to preclude the transfer of contamination, and that generally are not to be opened during operations. Examples of RABS include CAIs and CACIs.
SDA: Sabouraud dextrose agar.
Secondary engineering control (SEC): The area where the PEC is placed (eg, a cleanroom suite or an SCA). It incorporates specific design and operational parameters required to minimize the risk of contamination within the compounding area.
Segregated compounding area (SCA): A designated space, area, or room that is not required to be classified and is defined with a visible perimeter. The SCA must contain a PEC and is suitable for preparation of Category 1 CSPs only.
Single-dose containers: A container of sterile product for parenteral administration (eg, injection or infusion) that is designed for use with a single patient as a single injection/infusion. A single-dose container usually does not contain a preservative. See <659> Injection Packaging Systems, Single-dose container.
SOP: Standard operating procedure.
Specification: The tests, analytical methods, and acceptance criteria to which any component, CSP, container closure system, equipment, or other material used in compounding CSPs must conform to be considered acceptable for its intended use.
Sporicidal disinfectant: A chemical or physical agent that destroys bacterial and fungal spores when used in sufficient concentration for a specified contact time. It is expected to kill all vegetative microorganisms.
Stability: The extent to which a product or preparation retains physical and chemical properties and characteristics within specified limits throughout its expiration or BUD.
Sterility assurance level (SAL): See the entry for *Probability of a nonsterile unit* (PNSU).
Sterility: The absence of viable microorganisms.
Sterilization by filtration: Passage of a gas or liquid through a sterilizing-grade membrane to yield filtrates that are sterile.

Copyright © July 2024 National Association of Boards of Pharmacy® (NABP®). All rights reserved. NABP developed this inspection form for sole use by NABP, boards of pharmacy, government agencies that regulate drug distributors, and for internal use by the named facility participating in the VPP. Disclosure of this form to a third party or use of the form by a third party is strictly prohibited without NABP's prior written authorization.

GLOSSARY USP <797>
Sterilizing-grade filter: Filter membranes that are documented to retain 100% of a culture of 10^7 microorganisms of a strain of *Brevundimonas diminuta* per square centimeters of membrane surface under a pressure of not less than 30 psi. Such filter membranes are nominally 0.22- or 0.2-µm pore size.
Terminal sterilization: The application of a lethal process (eg, steam, dry heat, irradiation) to sealed containers for the purpose of achieving a predetermined PNSU of greater than 10−6 or a probability of less than one in one million of a nonsterile unit.
TSA: Trypticase soy agar.
Unclassified space: A space not required to meet any air cleanliness classification based on the ISO.
Unidirectional airflow: Air within a PEC moving in a single direction in a uniform manner and at sufficient velocity to sweep particles away from the DCA.
Verify: To confirm that a method, process, system, or equipment will perform as expected under the conditions of actual use.
Visual smoke study: A test, used in ISO Class 7 and ISO Class 8 rooms that do not have unidirectional airflow, in which a visible source of smoke, which is neutrally buoyant, is used to verify an absence of stagnant airflow. This test does not need to be performed under dynamic operating conditions and is not appropriate for PECs (see the entry for *Dynamic airflow smoke pattern test*).
Workflow management system: Technology comprised of hardware and/or software that allows for automation to assist in the verification of components of, and preparation of, CSPs and to document components and processes.

Hazardous Drugs - Handling in Health Care Settings

The information and comments obtained in the Hazardous Drugs - Handling in Health Care Settings Inspection is based on USP Chapter <800>.

Any items marked "Recommendation" are considered "best practices" and are not considered requirements for compliance with USP standards, but the information is collected as it may be a requirement under state law.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

	General Information and Scope:	Observation	Notes
1.00	Does the pharmacy handle any drugs on the National Institute for Occupational Safety and Health (NIOSH) list that **require** all the containment requirements of USP <800>?	Yes	
1.01	Does the pharmacy handle any ***hazardous drug*** active pharmaceutical ingredients (HD API)? *If yes, please list.*	Yes	Doc01_HD1.01
1.02	Does the pharmacy handle any antineoplastic requiring manipulations (which can produce particles, aerosols, or gasses)? *If yes, please list.*	No	
2.00	Does the pharmacy handle any drugs on the NIOSH list that **do not** require all containment requirements of <800>?	No	
2.01	Does the pharmacy handle any final dosage forms of HDs (either compounded or manufactured unless required by the manufacturer) that do not require further manipulation other than counting and repackaging? *If yes, please list.*	No	
2.02	Does the pharmacy handle any dosage forms of other HDs **that are handled in full compliance** with containment requirements of <800>? *If yes, please list.*	No	
2.03	Does the pharmacy handle any dosage forms of other HDs **that are not handled** using all containment requirements of <800>? *If yes, please list.*	No

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
	List of Hazardous Drugs		
3.00	The pharmacy maintains a list of any items it handles that are included on the current NIOSH list of antineoplastic and other HDs. ***Review and attach list.*** *Verify that pharmacy has access to a copy of current NIOSH list.*	Yes	
4.00	The pharmacy reviews this list at least every 12 months for additions, deletions, or other changes and documents the review. *Verify documentation and* ***list date*** *of last change/review.*	N/A	Pharmacy has only been open 3/6/2025. This is in SOP.
5.00	The pharmacy reviews this list whenever the pharmacy adds a new agent or dosage form to the items it handles.	Yes	
6.00	The pharmacy has a system in place for the evaluation of new drugs (purchased, stored, handled, and/or dispensed) to determine whether they are considered HD.	Yes	
6.01	Pharmacy evaluates the drugs against the current version of the NIOSH list.	Yes	
6.02	In the absence of information, the pharmacy treats any new drug as an HD.	Yes	
7.00	If the pharmacy handles any HDs not using all containment requirements of <800>, an assessment of risk was performed for each drug and dosage form individually to determine alternative containment strategies, if needed, and work practices for each. *Review documentation of assessment and SOPs related to work practices/alternative containment.*	N/A

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
8.00	The assessment of risk evaluation performed by the pharmacy's organization includes all required information, for each drug and dosage form. *The first five (5) items below must be included in the evaluation in order to be compliant.*	Yes	
8.01	Type of HD (eg, antineoplastic, non-antineoplastic, reproductive risk only);	Yes	
8.02	Dosage form;	Yes	
8.03	Risk of exposure;	Yes	
8.04	Packaging;	Yes	
8.05	Manipulation; and	Yes	
8.06	If applicable, Table II and III drugs have alternative containment strategies and/or work practices to minimize occupational exposure.	Yes	
8.07	The assessment of risk is reviewed at least every 12 months, and the review is documented. *Enter date of last review in the notes.*	Yes	Initial date 3/6/2025.
	Personnel Responsibilities		
9.00	The pharmacy has a designated person(s) to oversee the handling of HDs who is qualified and trained for development of standard operating procedures (SOPs); overseeing compliance with standards, laws, and rules; ensuring competency of personnel; and ensuring environmental control.	Yes	
9.01	The designated person oversees the monitoring of the facility, including testing/sampling programs, maintaining, and documentation, and acting on results.	Yes

		Observation	Notes
Documentation and Standard Operating Procedures (SOPs)			
10.00	The assessment of risk and SOPs for handling HDs addresses all potential types of exposure, including all activities occurring within the operation that present an opportunity for exposure:		
10.01	**Receiving:** Contacting HD residues on packaging, work surfaces, floors	Yes	
10.02	**Dispensing:** Counting or packaging tablets and capsules	Yes	
10.03	**Compounding/other manipulations:** Crushing/splitting tablets, opening capsules, pouring liquids, weighing or mixing, constituting/reconstituting powdered/lyophilized HDs, expelling air from HD syringes, HD residue on personal protective equipment (PPE), cleaning activities of HD areas, and HD equipment maintenance.	Yes	
10.04	**Administration and other patient care activities** (if applicable).	Yes	
10.05	**Spills:** Spill generation, management, and disposal.	Yes	
10.06	**Transport**	Yes	
10.07	**Waste:** Collection and disposal of HD waste and trace contaminated waste	Yes	
11.00	SOPs are reviewed at least every 12 months by the designated person, and the review is documented.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
12.00	SOPs are readily available to all who may need to handle HD or respond to a spill (pharmacy employees, housekeeping, nursing personnel, delivery personnel, etc). *Describe whether P&Ps are available electronically, by paper, or both.*	Yes	Both
13.00	SOPs address at a minimum: *If no, document "missing" in Inspector Notes for each SOP topic*		**Please note NABP did not review each SOP for alignment on USP <800>. The SOP(s) described below is/are a reflection of any self-assessment completed by the pharmacy and/or shared with the inspector during the onsite inspection.**
13.01	Hazard communication program plan	Yes	
13.02	Competent personnel	Yes	
13.03	Occupational safety program	Yes	
13.04	Designation of HD areas	Yes	
13.05	Receiving HDs, including handling of damaged shipping containers/breakages	Yes	
13.06	A list of HDs	Yes	
13.07	Storage of HDs	Yes	
13.08	Compounding of HDs	Yes	
13.09	Use and maintenance of proper engineering controls (eg, containment primary engineering control [C-PECs], containment secondary engineering control [C-SECs], and closed system drug transfer device [CSTDs]) to include SOPs for repairs, loss of power, moving, etc.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
13.10	Hand hygiene and proper use of appropriate PPE based on activity (eg, receipt, transport, compounding, administration, spill, disposal).	Yes	
13.11	Deactivation, decontamination, cleaning, disinfection SOPs include all of the following:		
13.11.01	Agents used	Yes	
13.11.02	Dilutions, if used	Yes	
13.11.03	Frequency	Yes	
13.11.04	PPE to be worn (appropriate PPE resistant to the agents used, two pairs of chemotherapy gloves, impermeable disposable gowns, and eye, face, and respiratory protection if warranted–addressed in SOPs)	Yes	
13.11.05	Documentation requirements	Yes	
13.12	Receiving SOPs to include communications with suppliers about packaging and visual/other inspection of shipping containers for signs of damage and how to handle damaged containers.	Yes	
13.13	If a shipping container appears damaged and **does not need to be opened:**		
13.13.01	It is sealed without opening and wrapped in impervious plastic;	Yes	
13.13.02	Labeled as "hazardous"; and	Yes	
13.13.03	Returned to the supplier after contacting the supplier or disposed of as hazardous waste if supplier declines return.	Yes

		Observation	Notes
13.14	If a damaged shipping container **must be opened**:	[redacted]	
13.14.01	Container is sealed in plastic or an impervious container;	Yes	
13.14.02	It is transported to the C-PEC before opening, preferably nonsterile compounding C-PEC, if available;	Yes	
13.14.03	container is placed on a plastic-backed preparation mat;	Yes	
13.14.04	It is opened and undamaged items are removed and wiped down with a disposable wipe;	Yes	
13.14.05	Damaged item is enclosed in an impervious container and labeled "hazardous";	Yes	
13.14.06	Damaged item is returned to the supplier or disposed of as hazardous waste;	Yes	
13.14.07	Deactivate, decontaminate, and clean the C-PEC in accordance with SOPs; and	Yes	
13.14.08	If a sterile compounding C-PEC must be used, it is also disinfected after cleaning prior to resuming any sterile compounding activities.	Yes	
13.15	Safe work Practices SOPs	Yes	
13.16	Dispensing SOPs	Yes	
13.17	Packaging and labeling SOPs	Yes	
13.18	Transport SOPs	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
13.23	***Recommendation:*** *Does the pharmacy have a medical surveillance program? (a comprehensive control program to monitor and identify potential worker health care issues from HD exposure.)*	No	
14.00	The **hazard communication program** SOP has policies and procedures that ensure worker safety in all aspects of HD handling relevant to the pharmacy and ensure effective personnel training in proper labeling, transport, storage, and disposal of HDs, use of Safety Data Sheets (SDSs), based on the Globally Harmonized System of Classification and Labeling of Chemicals (GHS).	Yes	
15.00	The pharmacy's hazard communication program includes, at a minimum, all of the following:		
15.01	A written plan that describes how the standard will be implemented;	Yes	
15.02	How containers of HDs/hazardous chemicals will be labeled, tagged, or marked with the identity of the material and appropriate hazard warnings;	Yes	
15.03	SDSs are maintained for each hazardous chemical they use (29 CFR 1910.1200);	Yes	
15.04	How SDSs are readily accessible to personnel during each work shift and when they are in their work areas;	Yes	
15.05	Information and training provided to personnel prior to initial assignment to work with a hazardous chemical and whenever the hazard changes; and	Yes	
15.06	Personnel of reproductive capability confirm in writing that they understand the risks of handling HDs.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
Personnel Training —*Check four employee files for documentation*			
16.00	All personnel handling HDs are trained based on their job function prior to independently handling HDs.	Yes	
17.00	Personnel file contains the employee's acknowledgement of the risk of handling HD (as part of the hazardous communication program).	Yes	
18.00	For non-sterile HD compounding, personnel competency is observed and assessed at least annually for proper compounding technique, with no concerns identified.	Yes	
19.00	For sterile HD compounding, personnel competency is observed and assessed at least annually for proper sterile compounding aseptic technique, with no concerns identified.	Yes	
20.00	After initial HD training, personnel are trained prior to introduction of any new HD or new equipment, or prior to any significant change in process or SOP.	Yes	
21.00	All HD training and assessments are documented for each employee who transports, compounds, or administers HDs, and meets Occupational Safety and Health Administration Standard 1910.120 and any other requirements of law or regulation.	Yes	
22.00	All personnel who perform custodial HD waste removal and cleaning in HD handling areas are trained in appropriate procedures to protect themselves and the environment.	Yes	
23.00	HD training, based on employee file review, all of the following are present:		
23.01	Overview of pharmacy's HD list and their risks;	Yes

Hazardous Drugs - Handling in Health Care Settings

The information and comments obtained in the Hazardous Drugs - Handling in Health Care Settings Inspection is based on USP Chapter <800>.

Any items marked "Recommendation" are considered "best practices" and are not considered requirements for compliance with USP standards, but the information is collected as it may be a requirement under state law.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
23.02	Review of the SOPs related to HDs;	Yes	
23.03	Proper use of PPE;	Yes	
23.04	Proper use of equipment and devices (eg, engineering controls);	Yes	
23.05	Appropriate procedures for deactivation, decontamination, cleaning, and disinfection (if applicable);	Yes	
23.06	Response to known or suspected HD exposure;	Yes	
23.07	Spill management;	Yes	
23.08	Proper disposal of HDs and trace-contaminated materials; and	Yes	
23.09	New HD drug/new equipment or prior to any significant change in process or SOP.	Yes	
24.00	If respiratory protection is needed for any HDs handled, personnel are fit tested and trained in the proper use of the respirator.	Yes	
	Personal Protective Equipment		
25.00	For sterile and nonsterile compounding with HDs, personnel wear gowns; head, hair, and shoe covers; and two pairs of chemotherapy gloves.	Yes	
26.00	Appropriate PPE is readily accessible where HD is handled, include all of the following:

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
26.01	Receipt (PPE appropriate to HD as set forth in SOPs, and at a minimum, chemotherapy gloves worn);	Yes	
26.02	Storage;	Yes	
26.03	Transport;	Yes	
26.04	Nonsterile Compounding (if performed by the pharmacy);	Yes	
26.05	Sterile Compounding (if performed by the pharmacy);	Yes	
26.06	Administration, if applicable;	Yes	
26.07	Deactivation/decontamination, cleaning, and disinfecting (appropriate PPE resistant to the agents used, two pairs of chemotherapy gloves, impermeable disposable gowns, and eye, face, and respiratory protection if warranted/addressed in SOPs);	Yes	
26.08	Spill control;	Yes	
26.09	Waste disposal; and	Yes	
26.10	If administering injectable antineoplastics, two pairs of chemotherapy gloves and permeability resistant gowns are worn.	N/A	
27.00	Disposable PPE is not reused.	Yes	
28.00	Reusable PPE is decontaminated and cleaned after each use.	N/A

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
29.00	**Gloves:** The pharmacy is using appropriate gloves for the activities conducted (chemotherapy gloves meet ASTM standard D6978 – or its successor – and are resistant to cleaning agents used) and are resistant to cleaning agents used.	Yes	
29.01	**Recommendation:** Are *chemotherapy gloves worn for handling all HDs including non-antineoplastics and for reproductive risk only HDs?*	Yes	
29.02	Chemotherapy gloves are powder-free.	Yes	
29.03	Chemotherapy gloves are inspected for physical defects before use and defective gloves (eg, pin holes, tears, weak spots) are discarded.	Yes	
29.04	For sterile compounding, the outer chemotherapy gloves are sterile.	Yes	
29.05	Chemotherapy gloves are changed when torn, punctured, or contaminated.	Yes	
29.06	**Recommendation:** Are *chemotherapy gloves changed every 30 minutes (unless otherwise recommended by the manufacturer)?*	Yes	
29.07	Hands are washed with soap and water after removing chemotherapy gloves.	Yes	
30.00	**Gowns:** The pharmacy is using appropriate gowns for the activities conducted (if required for type of compounding based on standards or assessment of risk).	Yes	
30.01	Gowns are disposable.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
30.02	Gowns resist permeability of HDs and are not laboratory coats, surgical scrubs, or isolation gowns (selected based on HDs handled).	Yes	
30.03	Gowns close in the back, are long sleeved, and have closed cuffs that are elastic or knit.	Yes	
30.04	Gowns do not have seams or closures that will allow HDs to pass through.	Yes	
30.05	Gowns are changed in accordance with the manufacturer's instructions, or if no permeation information is available, they are changed every two to three hours or immediately after a spill or splash.	Yes	
30.06	Gowns worn in HD areas are not worn to other areas.	Yes	
31.00	**Head, hair** (beard and moustache, if appropriate), **and shoe and sleeve covers.** The pharmacy is using appropriate head, hair, and shoe and sleeve covers for the type of compounding based on standards or assessment of risk to provide protection from contact with HD residue, if required.	Yes	
31.01	When HD compounding, a second pair of shoe covers are donned before entering the C-SEC and doffed when exiting the C-SEC.	Yes	
31.02	Shoe covers worn in HD areas are not worn into other areas of the facility.	Yes	
32.00	**Eye and Face Protection**: The pharmacy is using appropriate eye and face PPE protection for the activities conducted (based on assessment of risk that HDs are irritating to the eyes and mucous membranes, where there is risk of spills or splashes when working outside of a C-PEC), if required.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
32.01	If a risk to eyes, goggles (or a full-face respirator) are worn. *Eyeglasses or safety glasses with side shields are not substituted for goggles.*	Yes	
32.02	If a risk to face and eyes, goggles plus a face shield (or a full-face respirator) are worn.	Yes	
33.00	**Respiratory Protection:** The pharmacy is using appropriate respiratory PPE protection for the activities conducted (receiving, transport, compounding, administration, and waste disposal) based on assessment of risk based on type of HD and type of activity, if required. *Indicate what type of PPE which is available to employees (and is fit-tested, when required).*	Yes	Akron Pharma N95 respirator and it is fit tested.
33.01	Fit-tested NIOSH-certified N95 respirator;	Yes	
33.02	Elastomeric half-mask with a multi-gas cartridge and P100-filter;	N/A	
33.03	Full-face piece, chemical cartridge-type respirator;	Yes	
33.04	PAPR; and/or	N/A	
33.05	Other (describe in notes).	N/A	
34.00	Surgical masks are **not** used as PPE when respiratory protection is needed.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
35.00	The pharmacy uses an appropriate respiratory PPE for large HD spills; deactivating, decontaminating, and cleaning underneath the work surface of the C-PEC; and when there is known or suspected airborne exposure to powders or vapors. *Indicate what type of PPE which is available to employees (and is fit-tested, when required).*	Yes	3M Full face piece respirator–fit tested
35.01	Fit-tested NIOSH-certified N95 respirator;	Yes	
35.02	Elastomeric half-mask with a multi-gas cartridge and P100-filter;	N/A	
35.03	Full-facepiece, chemical cartridge-type respirator;	N/A	
35.04	PAPR; and/or	N/A	
35.05	Other (describe in notes).	N/A	
36.00	Surgical masks are **not** used as PPE when respiratory protection is needed.	Yes	
37.00	**Disposal of Used PPE:** Is all PPE worn during handling of HDs considered contaminated with at least trace quantities?	Yes	
37.01	Worn PPE is placed in an appropriate HD waste container.	Yes	
37.02	The HD waste container is located in reasonable proximity to HD PPE doffing activities.	Yes	
37.03	Chemotherapy gloves, and sleeve covers if worn, are carefully removed and discarded immediately into an approved HD trace waste container inside the C-PEC or contained in a sealable bag for discarding outside the C-PEC.	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
Facilities and Engineering Controls			
38.00	There are signs prominently displayed before the entrance to all HD handling areas designating the hazard.	Yes	
38.01	Access to these areas are restricted to authorized personnel who have been appropriately trained.	Yes	
38.02	HD areas are located away from breakrooms/refreshment areas for personnel, patients, and/or visitors.	Yes	
39.00	There are designated HD areas for any of the following:		
39.01	Receiving and unpacking of HDs	Yes	
39.02	Storage of HDs	Yes	
39.03	Nonsterile HD compounding (if performed by the pharmacy)	Yes	
39.04	Sterile HD compounding (if performed by the pharmacy)	Yes	
40.00	***Recommendation:*** *If there is a requirement for certain designated areas to have negative pressure from surrounding areas, is there an uninterrupted power source (UPS) to the ventilation systems in order to maintain negative pressure in the case of power loss?*	No	
41.00	**Receipt:** Are HDs received and unpacked (removed from external shipping containers) in an appropriate environment? *Describe.*	Yes	The compounding technician receives and unpacks in the HD nonsterile room.

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
41.01	HD	Yes	
41.01.01	Neutral	No	
41.01.02	Negative	Yes	
42.00	HDs are not unpacked in a sterile compounding area (eg, no external containers are brought into C-SEC).	Yes	
43.00	**Storage:** Are HDs stored in a manner to minimize accidental exposure? *Describe.*	Yes	All HDs are stored in the nonsterile HD room. They are neat and organized.
43.01	HDs are not stored on the floor.	Yes	
43.02	HDs are stored in a manner to minimize breakage and spillage.	Yes	
43.03	If facility is in an area prone to specific types of natural disasters, appropriate precautions are taken (eg, raised front lips on shelving in earthquake prone areas).	Yes	
44.00	Antineoplastic HDs that require manipulation (other than counting and repackaging final dosage forms) and HD API are stored separately from non-HDs.	Yes	
44.01	These HDs are stored in an externally ventilated, negative pressure room.	Yes

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
44.02	The HD storage room has at least 12 air changes per hour (ACPH).	Yes	
44.03	Refrigerated antineoplastic HDs are stored in a dedicated refrigerator in a negative pressure area with at least 12 ACPH (eg, storage room, buffer room, or containment segregated compounding area [C-SCA]).	N/A	There are no refrigerated drugs in the pharmacy.
44.04	**Recommendation:** *If the refrigerator is located in a buffer room, is an exhaust located adjacent to the refrigerator's compressor and behind the refrigerator?*	N/A	There are no refrigerators in the pharmacy.
45.00	If non-antineoplastic, reproductive risk only, and final dosage forms of antineoplastics are stored with other non-HD inventory, there is a written policy/SOP addressing it.	Yes	
46.00	**Compounding:** There are appropriate engineering controls to protect the HD preparation from cross-contamination, and if sterile compounding, from microbial contamination, during all phases of the compounding process.	Yes	
47.00	All HD compounding are performed within a C-PEC located in a C-SEC room.	Yes	
47.01	The C-SEC for both sterile and nonsterile HD compounding has all of the following:		
47.01.01	Has fixed walls;	Yes	
47.01.02	Is externally vented;	Yes

Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
47.01.03	Is able to meet (12) or exceed ACPH requirements;	Yes	
47.01.04	Is physically separated (ie, a different room) from other preparation areas; and	Yes	
47.01.05	Has a negative pressure differential of between 0.01 inches and 0.03 inches of water column relative to all adjacent areas.	Yes	
48.00	The C-PEC operates continuously if it supplies some or all of the negative pressure in the C-SEC or if it is used for sterile compounding.	Yes	
49.00	There is a sink readily available for handwashing on the hazardous side.	Yes	
49.01	There is an eyewash station readily available.	Yes	
49.02	Water sources and drains are a minimum of 1 meter away from the C-PEC.	Yes	
50.00	Does the pharmacy engage in **nonsterile HD compounding**? If yes, complete 50.01-54. If no, skip to 55:	Yes	
50.01	Select the location where **nonsterile HD compounding** is performed type(s):		
50.01.01	C-PECs used for sterile HD compounding are located in a different room than C-PECs used for nonsterile HD compounding	Yes

		Observation	Notes
50.01.02	C-PECs used for sterile HD compounding are located in the same room as C-PECs used for nonsterile HD compounding.	No	
50.02	Select the type(s) of containment primary engineering control(s) used for **nonsterile HD compounding**:		
50.02.01	Class I biological safety cabinet (BSC)	N/A	
50.02.02	Class II BSC	N/A	
50.02.03	Containment ventilated enclosure (CVE)	Yes	
50.02.04	Compounding aseptic containment isolator (CACI)	N/A	
50.02.05	Other, describe	N/A	
51.00	Indicate if the C-PEC used for **nonsterile HD compounding** (must be one of two below in order to be compliant):		
51.01	Is externally vented *(preferred)* ; **and/or**	No	Ductless Fume Hood
51.02	Has redundant High Efficiency Particulate Air (HEPA) filters in series	Yes	
52.00	Does the pharmacy use the same C-PEC (Class II BSC or CACI) used for sterile HD compounding and nonsterile HD compounding?	No	
52.01	Is **nonsterile HD compounding** only "occasional"? */ If yes, please describe frequency and quantity.*	N/A

		Observation	Notes
55.01.06	Class III BSC	N/A	
55.01.07	LAFW (not for antineoplastics)	N/A	
55.01.08	CAI (not for antineoplastics)	N/A	
56.00	The C-PEC maintains ISO Class 5 or better air quality and is under continuous operation, unless power loss or repair occurs.	Yes	
57.00	Is the C-PEC used for **sterile HD compounding** externally vented?	Yes	
58.00	If a BSC or CACI that is used for **sterile HD compounding** is also used for non-HD preparations, is the non-HD preparation placed into a protective outer wrapper during removal from the C-PEC?	N/A	
58.01	If used for both, is the non-HD preparation labeled to require PPE handling precautions?	N/A	
59.00	If the C-SEC is an unclassified containment segregated HD compounding area (C-SCA: enclosed separate room with fixed walls, but not ISO classified), beyond-use dates (BUDs) are limited in accordance with <797> as Category 1 compounded sterile preparations.	N/A	
59.01	The C-SEC (C-SCA) has at least 12 ACPH. *Verify documentation and monitoring.*	Yes	Verified
59.02	A handwashing sink is at least one meter or more away from the C-PEC	Yes

Hazardous Drugs - Handling in Health Care Settings

The information and comments obtained in the Hazardous Drugs - Handling in Health Care Settings Inspection is based on USP Chapter <800>.

Any items marked "Recommendation" are considered "best practices" and are not considered requirements for compliance with USP standards, but the information is collected as it may be a requirement under state law.

An inspection against current Good Manufacturing Practices (cGMPs) was not conducted. There may be some overlap in concepts.

Facility Name: St. Luke Lab, LLC dba St. Luke Pharmacy
e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
59.02.01	Describe whether the sink is inside the C-SCA or directly outside the C-SCA		
60.00	If BUDs are longer than the Category 1 BUDs specified in <797>, the PEC is located in a C-SEC, which is an ISO Class 7 buffer room adjacent to an ISO Class 7 anteroom.	Yes	
60.01	The buffer room has fixed walls.	Yes	
60.02	The buffer room is externally vented.	Yes	
60.03	The buffer room has HEPA-filtered supply air.	Yes	
60.04	The buffer room has at least 30 ACPH.	Yes	
60.05	The buffer room has a negative pressure differential of between 0.01 inches and 0.03 inches of water column relative to the anteroom.	Yes	
60.06	The anteroom has fixed walls.	Yes	
60.07	The ante room has a minimum of 30 ACPH of HEPA-filtered supply air.	Yes	
60.08	The ante room maintains positive pressure of at least 0.02 inches water column relative to any adjacent unclassified areas.	Yes	
60.09	The handwashing sink is located in the anteroom at least 1 meter or more away from the door to the buffer room to prevent contamination into the negative pressure buffer room.	Yes

e-Profile ID: 1880521
Inspection Date: 6/16/2025, 6/18/2025, 6/19/2025 & 6/20/2025

		Observation	Notes
61.00	If the negative-pressure HD buffer room is entered through a positive-pressure non-HD buffer room, there is a line of demarcation within the buffer room for donning and doffing PPE.	Yes	
61.01	There is a design and method to contain and minimize HD contamination when **transporting** HDs, HD CSPs, and HD waste into and out of the negative pressure buffer room:	Yes	
61.02	Indicate how HD contamination is minimized:		
61.02.01	Pass-through chamber between negative pressure buffer room and adjacent space included in the facility's certification not compromising air quality in the buffer room *(verified in the facility's semi-annual certification report that pass through has not compromised air quality in the buffer room).*	Yes	Verified
61.02.02	Use of sealed containers	Yes	
61.02.03	Other, *describe*	N/A	
	Environmental Quality and Control - Surface wipe sampling		
62.00	**Recommendation: Surface wipe sampling** is performed routinely (initially and at least every six months) to monitor HD containment processes and trends, which includes all of the following:	Yes	
62.01	Interior of C-PEC and equipment within the C-PEC	Yes	
62.02	Pass-through chambers	Yes	
62.03	Surfaces in staging or work areas near the C-PEC	Yes	
62.04	Areas adjacent to the C-PEC (eg,. floors directly under, staging, and dispensing areas)	Yes	
62.05	Areas immediately outside the HD buffer room or the C-SCA	Yes

		Observation	Notes
Receiving			
63.00	**Recommendation:** HDs are packaged by the supplier in impervious plastic to segregate them from other drugs and decrease possibility of exposure during unpacking and internal transfer.	Yes	
64.00	HDs are delivered to the HD storage area immediately after unpacking.	Yes	
65.00	A spill kit is readily accessible in the receiving area.	Yes	
66.00	Containers are visually examined for signs of damage or breakage prior to opening.	Yes	
67.00	If a shipping container appears damaged and does not need to be opened, it is sealed, enclosed in an impervious container, labeled "hazardous" on the outside, and returned to the supplier after contact or disposed of as hazardous waste.	Yes	
67.01	If a damaged shipping container must be opened, it is done so according to SOPs, to include sealing the container in plastic or an impervious container, transporting it to the C- PEC for unpacking, removing, and wiping the outside of the undamaged items with disposable wipes, resealing the damaged items in an impervious container and marking it "hazardous," returning it to the supplier after contact or disposing as hazardous waste, and deactivating, decontaminating, and cleaning the C-PEC.\	Yes	
68.00	Damaged packages are considered spills and reported to the designated person. ***List last date of damaged package receipt.***	Yes	There have not been any damaged packages received since opened 3/6/2025.

		Observation	Notes
Labeling, Packaging, Transport, and Disposal			
69.00	HDs requiring special HD handling are always clearly labeled as hazardous during transport and in accordance with any laws related to labeling of HDs.	Yes	
70.00	Labeling processes do not introduce contamination into non-HD handling areas.	Yes	
71.00	Packaging materials are chosen that protect the HD and healthcare worker against damage, leakage, contamination, and degradation during transport, but also maintains the physical integrity, stability, and sterility of the HD.	Yes	
72.00	Pneumatic tubes are not used for transporting any liquid HDs or antineoplastic HDs.	Yes	
73.00	Labeling on HDs shipped outside the pharmacy meets all of the following requirements:		
73.01	Labeling specified in SDS for transport;	Yes	
73.02	Storage and disposal instructions; and	Yes	
73.03	Labeled with HD category.	Yes

Section 1

SUMMARY

St. Luke Compounding Pharmacy
New Port Richey, Florida
ISO Class 7 Facility
ISO Class 5 Horizontal Laminar Airflow Clean Bench
Containment Ventilated Enclosure

SUMMARY

Of Testing Performed July 02 & 03, 2025

The purpose of this inspection was to prove continued compliance within the facility to the requirements of a non-unidirectional ISO Class 7 & 8 clean rooms as defined by ISO 14644-1:2015, referenced in USP<800>, USP<797>, 64B16-27.797, USP<795>, cand other applicable documents listed herein.

This facility is considered a Category 1 and Category 2 compounding facility with hazardous and non-hazardous zones.

Testing was performed during dynamic conditions with up to two personnel present and two Medrep employees performing the testing.

Ante Gown In has changed from an ISO Class 7 environment to an ISO Class 8 environment.

The biological safety cabinet Model #AC2-6S9-NS (S# 2024-204033) was not certified at this time due to pending repair.

This scheduled inspection is part of a semi-annual monitoring and periodic test program designed to document long-term compliance. The most recent inspections were performed on November 06, December 30 & 31, 2024 & January 02 & 08, 2025.

Following the testing and based upon the results of those tests listed, the facility and the clean air device were found to be in full conformance and a certificate of compliance has been issued.

Testing performed by: Gene Formanek
IEST Level 3 Technician

Testing performed by: Frank Vargas
IEST Level 2 Technician

Report prepared by: James Rice
Tier 2 Compliance Officer

Report approved by: Caroline Arnold
Tier 2 Compliance Officer

Respectfully submitted: July 08, 2025

This scheduled facility inspection consisted of the following tests:

1. Determining Air Exchange Rate per Hour	MEDREP-Proc-18
2. Non-Viable Airborne Particle Count in a Facility	MEDREP-Proc-21
3. Air Volume Test in a Facility	MEDREP-Proc-23
4. Facility Differential Pressurization Test	MEDREP-Proc-24
5. Leak Testing Room HEPA Filters	MEDREP-Proc-25
6. Temperature Uniformity Test	MEDREP-Proc-27
7. Humidity Uniformity Test	MEDREP-Proc-28
8. Check/Adjust Gages	MEDREP-Proc-61

The tests performed upon the device were:

1. Airflow Adjustment for Class II BSCs	MEDREP-Proc-1
2. Laminar Flow Clean Bench Airflow Profile	MEDREP-Proc-3
3. Testing Fluorescent Illumination Level	MEDREP-Proc-4
4. Testing Sound Level	MEDREP-Proc-6
5. Smoke Pattern in a Device	MEDREP-Proc-7
6. Check Leveling of a Device	MEDREP-Proc-8
7. Testing HEPA Filters for Laminar Airflow CBs	MEDREP-Proc-12
8. Testing Airflow in Ventilated Enclosure	MEDREP-Proc-13
9. Performing the Site Installation Assessment	MEDREP-Proc-39
10. Testing Device Alarm Functions	MEDREP-Proc-40
11. Non-Viable Particle Counts in a Device	MEDREP-Proc-48
12. Check/Adjust Gage	MEDREP-Proc-60

Section 2

RESULTS OF TESTING

Summary of Particle Count Test Procedure

The purpose of this test is to demonstrate compliance of the clean zone tested to the requirements specified in the International Organization for Standardization document ISO 14644-1:2015.

USP <797> requires all buffer zones to be ISO Class 7 or cleaner. The ante rooms may be an ISO Class 8 unless the ante room is adjacent to a negative ISO Class 7, then the ante room must also be an ISO Class 7 environment.

This test is also referred to as a Particle Count Survey or an Airborne Particle Count.

The number of sample locations was determined by utilizing table A.1 which is located in ISO 14644-1:2015, a copy of which may be found in section 6 of this report.

In this case:

Buffer Room = minimum of 6 locations.
165.25" x 114.25" = 18,879.81in² ÷ 144 = 131.11ft² x 0.093 = 12.19m²
Minus: 20.00" x 14.25" = 285.00in² ÷ 144 = 1.98ft² x 0.093 = 0.18m².
Minus: 20.25" x 14.50" = 293.63in² ÷ 144 = 2.04ft² x 0.093 = 0.19m².
Equals: 11.82m² = **6** locations.

Ante Gown In Room = minimum of 2 locations.
52.00" x 95.25" = 4,953.00n² ÷ 144 = 34.40ft² x 0.093 = 3.20m²
Minus: 12.25" x 16.00" = 196.00in² ÷ 144 = 1.36ft² x 0.093 = 0.13m².
Equals: 3.07m² = **2** locations.

Buffer H.D. Room = minimum of 4 locations.
109.50" x 113.50" = 12,428.25in² ÷ 144 = 86.31ft² x 0.093 = 8.03m²
Minus: 48.25" x 13.50" = 651.38in² ÷ 144 = 4.52ft² x 0.093 = 0.42m².
Equals: 7.61m² = **4** locations.

H.D Gown In Room = minimum of 2 locations.
61.50" x 95.00" = 5,842.50in² ÷ 144 = 40.57ft² x 0.093 = 3.77m²
Minus: 11.00" x 18.00" = 198.00in² ÷ 144 = 1.38ft² x 0.093 = 0.13m².
Minus: 6.00" x 18.00" = 108.00in² ÷ 144 = 0.75ft² x 0.093 = 0.07m².
Equals: 3.57m² = **2** locations.

Sterile Prep Room = minimum of 4 locations.
111.50" x 95.00" = 10,592.50in² ÷ 144 = 73.56ft² x 0.093 = 6.84m²
Minus: 23.75" x 11.25" = 267.19in² ÷ 144 = 1.86ft² x 0.093 = 0.17m².
Equals: 6.67m² = **4** locations.

H.D. Prep Room = minimum of 3 locations.
92.00" x 95.00" = 8,740.00in² ÷ 144 = 60.69ft² x 0.093 = 5.64m²
Minus: 19.00" x 6.25" = 118.75in² ÷ 144 = 0.82ft² x 0.093 = 0.08m².
Minus: 22.00" x 11.75" = 258.50in² ÷ 144 = 1.80ft² x 0.093 = 0.17m².
Equals: 5.39m² = **3** locations.

The location of the samples taken was determined by dissecting the room into equal grids and sampling in the center of each grid, as illustrated in Section 4 of this report.

The amount of air sampled at each location was 5.0 cubic feet, or 141.6 cubic liters, which exceeds the minimum volume required at each sample location determined by the following equation:

$$V_s = \frac{20}{Cn,m} \times 1{,}000$$

Where: V_S is the minimum single sample per location expressed in liters.
$C_{n,m}$ is the class limit (number of particles per cubic meter) for the largest considered particle size specified.
20 The defined number of particles that could be counted if the particle concentration were at the class limit.

For ISO Class 5: Vs = 24.04 liters
[20 ÷ 832 x 1,000 = 24.04]

For ISO Class 6: Vs = 68.26 liters
[20 ÷ 293 x 1,000 = 68.26]

For ISO Class 7: Vs = 6.83 liters
[20 ÷ 2,930 x 1,000 = 6.83]

For ISO Class 8: Vs = 0.68 liters
[20 ÷ 29,300 x 1,000 = 0.68]

The particle counter sampled at a rate of 1.0 cfm through an isokinetic probe which was oriented upward and held in a stand located at a height of 32 inches above the floor and attached to the counter by HYTREL PVC tubing which does not exceed 10 feet in length. Each location was sampled for a period of five minutes and the readings were then normalized to represent a cubic foot and a cubic meter.

The first equipment used is a discrete-particle counter (DPC) manufactured by Particle Measuring Systems, Inc. the model Lasair III_310C serial #103782 which was last calibrated on April 29, 2025 and due for recalibration on April 28, 2026. The most recent calibration report is located in Section 6.

The second equipment used is a discrete-particle counter (DPC) manufactured by Particle Measuring Systems, Inc. the model Lasair III_310C serial #171352 which was last calibrated on July 08, 2024 and due for recalibration on July 07, 2025. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-21 which is available upon request.

The above referenced testing procedure meets test methods outlined in the following documents:

IEST-G-CC1001	Counting Airborne Particles for Classification and Monitoring of Cleanrooms and Clean Zones

Summary of Airflow Test Procedure

The purpose of this test is to accurately measure the total volume of HEPA filtered air entering the clean zone. This volume will then be utilized to determine the air exchange rate within the clean zone. The HEPA filtered air is measured in one of two ways dependent upon accessibility.

While volume measurement is the preferred method because it is the most accurate, it may not be possible when access is hindered. In that case velocity readings are performed.

1) Each HEPA filter or HEPA supplied diffuser located within the clean zone is tested for volume by placing a flow hood over the entire surface of the filter or diffuser. A series of 5 readings are taken over a span of 30 seconds and recorded. These readings are averaged and the resulting average volume in cfm is recorded.

2) Velocity readings are taken by dividing the area of the HEPA filter into grids roughly 12" square. A single reading is taken within each grid by placing either a thermoanemometer probe or a multipoint sensor six inches below the filter face. Each measurement is at least 5 seconds in length. This reading is recorded. All subsequent readings are averaged per filter and each average recorded. The effective filter area is then determined by multiplying the length and width of the filter medium. The volume per filter is determined by multiplying the average velocity by the effective filter area.

A *k* correction factor may be used to normalize velocity measurements when some HEPA filters in a clean zone cannot be measured using a flow hood. The formula to determine the *k* factor is:

$$K_v = \frac{\text{Actual filter airflow volume}}{\text{Calculated filter airflow volume}}$$

The first device used to measure airflow volume was a flow hood manufactured by Alnor/TSI, Inc. the model EBT731 serial #EBT732226001 last calibrated on February 13, 2025 and due for recalibration on February 12, 2026. The most recent calibration report is located in Section 6.

The second device used to measure airflow volume was a flow hood manufactured by Alnor/TSI, Inc. the model EBT731 serial #EBT731503016 last calibrated on August 19, 2024 and due for recalibration on August 18, 2025. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-23 which is available upon request.

The above referenced testing method meets test methods outlined in the following documents:

IEST-RP-CC006.3	Testing Cleanrooms

Summary of Airflow Test Procedure

The purpose of this test is to accurately measure the total volume of air exiting the room. This volume will then be utilized to determine the air exchange rate within the room. The air is measured in one of two ways:

While volume measurement is the preferred method because it is the most accurate, it may not be possible when access is hindered. In that case velocity readings are performed.

1) Each diffuser located within the room is tested for volume by placing a flow hood over the entire surface of the filter or diffuser. A series of 5 readings are taken over a span of 30 seconds and recorded. These readings are averaged and the resulting average volume in cfm is recorded.

2) Velocity readings are taken by dividing the area of the register into grids roughly 12" square. A single reading is taken within each grid by placing either a thermo-anemometer probe or a multipoint sensor six inches below the register opening. Each measurement is at least 5 seconds in length. This reading is recorded. All subsequent readings are averaged per register and each average recorded. The effective register area is then determined by multiplying the length and width of the register opening. The volume per register is determined by multiplying the average velocity by the effective register opening.

A *k* correction factor may be used to normalize velocity measurements when some registers filters in a room cannot be measured using a flow hood. The formula to determine the *k* factor is:

$$K_v = \frac{\text{Actual register airflow volume}}{\text{Calculated register airflow volume}}$$

The device used to measure airflow velocity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM441045003 which was last calibrated on July 17, 2024 and due for recalibration on July 16, 2025. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-23 which is available upon request.

The above referenced testing method meets test methods outlined in the following documents:

Summary of Air Exchange Rate Calculations

The purpose of this test is to determine the number of air changes per hour (ACPH).

For an ISO Class 7 environment, the ACPH should be >30. At least 15 ACPH must come from the facility ventilation system. When 15 ACPH is achieved from the HEPA filtered facility system but the ACPH is less than 30, then the HEPA filtered airflow from any devices within the facility may be utilized to achieve >30 ACPH.

The volume of HEPA filtered air entering the room is converted from cubic feet per minute (CFM) to cubic feet per hour (CFH) by multiplying by 60. This result is then divided by the room volume in cubic feet.

The room volume is determined by multiplying the area of the room by the ceiling height.

To achieve the air exchange rate or Air Changes per Hour (ACPH) the following formula is used:

ACPH= (CFM x 60) ÷ Room Volume

Individual room volumes and Air Exchange Rates in this case:

In this case:

Buffer Room ACPH = 28.94 (Does not include device airflow)
18,301.18in^2 (room area) x 96.13" (ceiling height) = 1,759,292.43in^3÷1,728 = 1,018.11ft^3
491 cfm x 60 = 29,460 cfh ÷ 1,018.11 = 28.94

Ante Gown In Room ACPH = 26.98
4,757.00in^2 (room area) x 96.13" (ceiling height) = 457,290.41in^3÷1,728 = 264.64ft^3
119 cfm x 60 = 7,140 cfh ÷ 264.64 = 26.98

Buffer H.D. Room ACPH = 52.55
11,776.87in^2 (room area) x 96.00" (ceiling height) = 1,130,579.52in^3÷1,728 = 654.27ft^3
573 cfm x 60 = 34,380 cfh ÷ 654.27 = 52.55

H.D Gown In Room ACPH = 33.36
5,536.50in^2 (room area) x 96.00" (ceiling height) = 531,504.00in^3÷1,728 = 307.58ft^3
171 cfm x 60 = 10,260 cfh ÷ 307.58 = 33.36

Sterile Prep Room ACPH = 19.04(Does not include device airflow)
10,325.31in^2 (room area) x 96.00" (ceiling height) = 991,229.76in^3÷1,728 = 573.63ft^3
182 cfm x 60 = 10,920 cfh ÷ 573.63 = 19.04

H.D. Prep Room ACPH = 23.25(Does not include device airflow)
8,362.75in² (room area) x 96.00" (ceiling height) = 802,824.00in³÷1,728 = 464.60ft³
180 cfm x 60 = 10,800 cfh ÷ 464.60 = 23.25

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-18 which is available upon request.

The above referenced testing method meets test methods outlined in the following documents:

RESULTS OF AIR EXCHANGE RATE CALCULATIONS

Non-Sterile – Hazardous Drug Room Unclassified Environment			
Exhausted Air Volume	Room Volume	Minimum Acceptable Rate	Room Air Exchange Rate
570 cfm	1,147.75ft³	12 ACPH	29.80 ACPH

Occupancy State at time of test: DYNAMIC

Result of Air Exchange Calculations: PASS

Summary of Air Exchange Rate Calculations

The purpose of this test is to determine the number of air changes per hour (ACPH).

For an unclassified negative pressure environment the ACPH must be at least 12.

The volume of air exhausted from the room is converted from cubic feet per minute (CFM) to cubic feet per hour (CFH) by multiplying by 60. This result is then divided by the room volume in cubic feet.

The room volume is determined by multiplying the area of the room by the ceiling height.

To achieve the air exchange rate or Air Changes per Hour (ACPH) the following formula is used:

ACPH= (CFM x 60) ÷ Room Volume

Individual room volumes and Air Exchange Rates in this case:

In this case:

Non-Sterile H.D. Room ACPH = 29.80
20,685.31in² (room area) x 95.88" (ceiling height) = 1,983,307.52in³÷1,728 = 1,147.75ft³
570 cfm x 60 = 34,200 cfh ÷ 1,147.75 = 29.80

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-18 which is available upon request.

Summary of HEPA Filter Integrity Test

The purpose of this test is to confirm that the HEPA, or ULPA, filter system is properly sealed by verifying the absence of by-pass leakage in the installation and that the filters are intact and free of defects. This test is also known as the HEPA and ULPA filter installation leak test and also the installed filter system leakage test.

This test is performed by generating a challenge aerosol upstream of the filter(s) to be tested. Each filter is then tested for leaks by scanning the face of the filter, the seal and the frame for penetrations using an aerosol photometer. Minor leaks may be repaired. Any by-pass not corrected will result in failure.

Filters installed within a filter housing located within the ventilation system are tested using the probe system where a single downstream reading is taken to verify the overall efficiency of the filter, gasket seating and housing.

The challenge liquid used was Poly Alpha Olefin (PAO). The challenge aerosol was generated by multiple Laskin nozzles supplied by a compressor(s) providing 100 liters per minute at 20 psi per nozzle.

The challenge aerosol was introduced into ports testing the HEPA filters individually.

The first aerosol photometer used was a calibrated linear photometer manufactured by TEC Services, Inc. the model PH-4 serial #1944 last calibrated on February 11, 2025 and due for recalibration on February 10, 2026. The most recent calibration report is located in Section 6. The photometer probe is an isokinetic probe.

The second aerosol photometer used was a calibrated linear photometer manufactured by TEC Services, Inc. the model PH-4 serial #4520 last calibrated on June 09, 2025 and due for recalibration on June 08, 2026. The most recent calibration report is located in Section 6. The photometer probe is an isokinetic probe.

An upstream challenge could not be measured because of inaccessibility. Therefore, an internal calibration of the aerosol photometer was utilized using the following formula:

$$C_2 = NC_1 \quad \frac{Q_1}{Q_2}$$

Where: C_2 is the full scale photometer setting based upon manufacturers calibration data.
N is the number of Laskin nozzles used.
C_1 µg/L per nozzle when discharged into a flow rate of Q_1 (38 m^3/min).
Q_1 38 m^3/min
Q_2 Volume of air measured in m^3/min

In this case*:
*The values shown here for Q_2 and C_2 for each calculation are rounded for brevity.

HEPA Filter "A"
Full scale reading represents 167µg/L
(2) x (10) x 38 ÷ 4.56 = 166.71

HEPA Filter "B"
Full scale reading represents 132µg/L
(2) x (10) x 38 ÷ 5.78 = 131.57

HEPA Filter "C"
Full scale reading represents 213µg/L
(2) x (10) x 38 ÷ 3.57 = 213.02

HEPA Filter "D"
Full scale reading represents 226µg/L
(2) x (10) x 38 ÷ 3.37 = 225.55

HEPA Filter "E"
Full scale reading represents 74µg/L
(2) x (10) x 38 ÷ 10.34 = 73.53

HEPA Filter "F"
Full scale reading represents 82µg/L
(2) x (10) x 38 ÷ 9.30 = 81.72

HEPA Filter "G"
Full scale reading represents 157µg/L
(2) x (10) x 38 ÷ 4.84 = 156.96

HEPA Filter "I"
Full scale reading represents 149µg/L
(2) x (10) x 38 ÷ 5.10 = 149.11

The filter was then scan tested approximately 1 inch below the face of the filter at a rate of 2 inches per second with the photometer on the 0.10% scale. Any result above 0.01% is unacceptable and results in failure.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-11 and MEDREP-Proc-25 which is available upon request.

Summary of Room Segregation Test

The purpose of this test is to document the ability of the cleanroom ventilation system to maintain a specific pressure difference between the cleanroom and its surrounding environments. This test is also known as the Air Pressure Difference Test, the Differential Pressure Test or the Room Pressurization Test.

With all doors closed, the pressure difference is measured at each door and opening which contains a method of closure.

For most portals, a minimum pressure difference of 0.020" water column, and a maximum pressure differential of 0.050" is recommended. This difference should be outward from the cleanest zone to the less clean zone.

For hazardous drug rooms, the range required is -0.010" to -0.030" water column. Hazardous drug rooms must be negative to the surrounding areas which also must be of the same ISO Class.

The first device used to measure the pressure difference was a micromanometer manufactured by Alnor/TSI, Inc. the model EBT731 serial #EBT732226001 last calibrated on February 12, 2025 and due for recalibration on February 11, 2026. The most recent calibration report is located in Section 6.

The second device used to measure the pressure difference was a micromanometer manufactured by Alnor/TSI, Inc. the model EBT731 serial #EBT731503016 last calibrated on August 19, 2024 and due for recalibration on August 18, 2025. The most recent calibration report is located in Section 6.

The measurement was taken by connecting two 8 foot norprene tubes onto the micromanometer, extending each tube into adjoining rooms and recording the reading. If an existing pressure monitor is present, that reading is recorded for comparison.

Additionally, a visual confirmation of the air direction is performed by using a "smoke" generating device containing high purity food grade, kosher USP propylene glycol and distilled water.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-24 which is available upon request.

Summary of Temperature Test Procedure

The purpose of this test is to document the room operating temperature and to demonstrate the capability of the air handling system to maintain the temperature. This test is also known as the General Temperature Test.

The number of sample locations was determined by utilizing table A.1 which is located in ISO 14644-1:2015, a copy of which may be found in section 6 of this report.

In this case:

Buffer Room = minimum of 6 locations.
165.25" x 114.25" = 18,879.81in² ÷ 144 = 131.11ft² x 0.093 = 12.19m²
Minus: 20.00" x 14.25" = 285.00in² ÷ 144 = 1.98ft² x 0.093 = 0.18m².
Minus: 20.25" x 14.50" = 293.63in² ÷ 144 = 2.04ft² x 0.093 = 0.19m².
Equals: 11.82m² = **6** locations.

Ante Gown In Room = minimum of 2 locations.
52.00" x 95.25" = 4,953.00in² ÷ 144 = 34.40ft² x 0.093 = 3.20m²
Minus: 12.25" x 16.00" = 196.00in² ÷ 144 = 1.36ft² x 0.093 = 0.13m².
Equals: 3.07m² = **2** locations.

Buffer H.D. Room = minimum of 4 locations.
109.50" x 113.50" = 12,428.25in² ÷ 144 = 86.31ft² x 0.093 = 8.03m²
Minus: 48.25" x 13.50" = 651.38in² ÷ 144 = 4.52ft² x 0.093 = 0.42m².
Equals: 7.61m² = **4** locations.

H.D Gown In Room = minimum of 2 locations.
61.50" x 95.00" = 5,842.50in² ÷ 144 = 40.57ft² x 0.093 = 3.77m²
Minus: 11.00" x 18.00" = 198.00in² ÷ 144 = 1.38ft² x 0.093 = 0.13m².
Minus: 6.00" x 18.00" = 108.00in² ÷ 144 = 0.75ft² x 0.093 = 0.07m².
Equals: 3.57m² = **2** locations.

Sterile Prep Room = minimum of 4 locations.
111.50" x 95.00" = 10,592.50in² ÷ 144 = 73.56ft² x 0.093 = 6.84m²
Minus: 23.75" x 11.25" = 267.19in² ÷ 144 = 1.86ft² x 0.093 = 0.17m².
Equals: 6.67m² = **4** locations.

H.D. Prep Room = minimum of 3 locations.
92.00" x 95.00" = 8,740.00in² ÷ 144 = 60.69ft² x 0.093 = 5.64m²
Minus: 19.00" x 6.25" = 118.75in² ÷ 144 = 0.82ft² x 0.093 = 0.08m².
Minus: 22.00" x 11.75" = 258.50in² ÷ 144 = 1.80ft² x 0.093 = 0.17m².
Equals: 5.39m² = **3** locations.

The location of the samples taken was determined by dissecting the room into equal grids and sampling in the center of each grid, as illustrated in Section 4 of this report. Each temperature reading is averaged over the duration of sampling.

The first device used to measure temperature was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM441045003 which was last calibrated on July 17, 2024 and due for recalibration on July 16, 2025. The most recent calibration report is located in Section 6.

The second device used to measure temperature was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM442332003 which was last calibrated on February 17, 2025 and due for recalibration on February 16, 2026. The most recent calibration report is located in Section 6.

The acceptable temperature is determined by the customer, but typically temperatures in a cleanroom should be between 66° and 70° Fahrenheit.

This test is considered a secondary test and is performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-27 which is available upon request.

Summary of Relative Humidity Test Procedure

The purpose of this test is to document the room operating humidity and to demonstrate the capability of the air handling system to maintain the humidity. This test is also known as the General Moisture Uniformity Test.

The number of sample locations was determined by utilizing table A.1 which is located in ISO 14644-1:2015, a copy of which may be found in section 6 of this report.

In this case:

Buffer Room = minimum of 6 locations.
165.25" x 114.25" = 18,879.81in² ÷ 144 = 131.11ft² x 0.093 = 12.19m²
Minus: 20.00" x 14.25" = 285.00in² ÷ 144 = 1.98ft² x 0.093 = 0.18m².
Minus: 20.25" x 14.50" = 293.63in² ÷ 144 = 2.04ft² x 0.093 = 0.19m².
Equals: 11.82m² = **6** locations.

Ante Gown In Room = minimum of 2 locations.
52.00" x 95.25" = 4,953.00n² ÷ 144 = 34.40ft² x 0.093 = 3.20m²
Minus: 12.25" x 16.00" = 196.00in² ÷ 144 = 1.36ft² x 0.093 = 0.13m².
Equals: 3.07m² = **2** locations.

Buffer H.D. Room = minimum of 4 locations.
109.50" x 113.50" = 12,428.25in² ÷ 144 = 86.31ft² x 0.093 = 8.03m²
Minus: 48.25" x 13.50" = 651.38in² ÷ 144 = 4.52ft² x 0.093 = 0.42m².
Equals: 7.61m² = **4** locations.

H.D Gown In Room = minimum of 2 locations.
61.50" x 95.00" = 5,842.50in² ÷ 144 = 40.57ft² x 0.093 = 3.77m²
Minus: 11.00" x 18.00" = 198.00in² ÷ 144 = 1.38ft² x 0.093 = 0.13m².
Minus: 6.00" x 18.00" = 108.00in² ÷ 144 = 0.75ft² x 0.093 = 0.07m².
Equals: 3.57m² = **2** locations.

Sterile Prep Room = minimum of 4 locations.
111.50" x 95.00" = 10,592.50in² ÷ 144 = 73.56ft² x 0.093 = 6.84m²
Minus: 23.75" x 11.25" = 267.19in² ÷ 144 = 1.86ft² x 0.093 = 0.17m².
Equals: 6.67m² = **4** locations.

H.D. Prep Room = minimum of 3 locations.
92.00" x 95.00" = 8,740.00in² ÷ 144 = 60.69ft² x 0.093 = 5.64m²
Minus: 19.00" x 6.25" = 118.75in² ÷ 144 = 0.82ft² x 0.093 = 0.08m².
Minus: 22.00" x 11.75" = 258.50in² ÷ 144 = 1.80ft² x 0.093 = 0.17m².
Equals: 5.39m² = **3** locations.

The location of the samples taken was determined by dissecting the room into equal grids and sampling in the center of each grid, as illustrated in Section 4 of this report. Each humidity reading is averaged over the duration of sampling.

The first device used to measure humidity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM441045003 which was last calibrated on July 17, 2024 and due for recalibration on July 16, 2025. The most recent calibration report is located in Section 6.

The second device used to measure humidity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM442332003 which was last calibrated on February 17, 2025 and due for recalibration on February 16, 2026. The most recent calibration report is located in Section 6.

The acceptable relative humidity level is determined by the customer, but typical readings in a cleanroom should be between <60%.

This test is considered a secondary test and is performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-28 which is available upon request.

The above referenced testing procedure meets test methods outlined in the following documents:

Summary of Laminar Flow Clean Bench Particle Count Test Procedure

The purpose of this test is to demonstrate compliance of the laminar flow clean bench clean air device tested to the requirements specified in the International Organization for Standardization document ISO 14644-1:2015.

USP <797> requires all biological safety cabinets, laminar flow clean benches and isolators used for compounding to be an ISO Class 5 environment. This test is also referred to as a Particle Count Survey or an Airborne Particle Count.

In the case of horizontal laminar airflow clean benches, the number of sample locations is 6. One sample at each side of the work surface, six inches from the sidewall, and four more samples taken down the center of the work surface equally separated to represent the entire work zone. This number far exceeds the minimum number required by using the formula referenced in ISO 14644-1:2015.

USP <797> requires that non-viable particle counts be sampled within all PECs under dynamic operating conditions. In this case, the number of sample locations was 1. This sample is taken within close proximity to the direct compounding area.

The amount of air sampled at each location was 1.0 cubic foot, or 28.3 cubic liters, which exceeds the minimum volume required at each sample location determined by the following equation:

$$V_s = \frac{20}{C_{n,m}} \times 1{,}000$$

Where: V_S is the minimum single sample per location expressed in liters.

$C_{n,m}$ is the class limit (number of particles per cubic meter) for the largest considered particle size specified.

20 The defined number of particles that could be counted if the particle concentration were at the class limit.

For ISO Class 5: Vs = 24.04 liters
[20 ÷ 832 x 1,000 = 24.04]

The particle counter sampled at a rate of 1.0 cfm through an isokinetic probe which was oriented horizontal toward the face of the HEPA filter and held in a stand located at a height of 6 inches above the work surface and attached to the counter by HYTREL PVC tubing which does not exceed 10 feet in length. Each location was sampled for a period of one minute and the readings were then normalized to represent a cubic foot and a cubic meter.

The equipment used is a discrete-particle counter (DPC) manufactured by Particle Measuring Systems, lnc. the model Lasair III_310C serial #171352 which was last calibrated on July 08, 2024 and due for recalibration on July 07, 2025. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-48 which is available upon request.

The above referenced testing procedure meets test methods outlined in the following documents:

IEST-G-CCI001	Counting Airborne Particles for Classification and Monitoring of Cleanrooms and Clean Zones
IEST-RP-CC002.4	Unidirectional-Flow, Clean Air Devices
IEST-RP-CC013	Calibration Procedures and Guidelines for Select Equipment Used in Testing Cleanrooms and Other Controlled Environments
ISO 14644-1:2015	Classification of air cleanliness
ISO 14644-2:2015	Specifications for testing and monitoring to prove continued compliance with ISO 14644-1
ISO 14644-3:2019	Test Methods
USP <797>	Guidebook to Pharmaceutical Compounding-Sterile Preparations
64B16-27.797	The Standards of Practice for Compounding Sterile Products
CAG-003	CETA Certification Guide for Sterile Compounding Facilities
CAG-008	CETA Certification Matrix for Sterile Compounding Facilities

Summary of Laminar Flow Clean Bench Certification Procedure

The purpose of this sequence of tests is to demonstrate compliance of the Laminar Flow Clean Bench(s) to the requirements set forth by the manufacturer of the cabinet. Additionally, USP <797> requires all biological safety cabinets, laminar flow clean benches and isolators used for compounding to be an ISO Class 5 environment.

There are a number of tests performed to comply with these requirements. In addition to the non-viable particle count test, these are:

1. Supply Velocity Profile Test

The velocity of the air moving outward through the work area is measured in a plane 6 inches from the face of the HEPA filter. This plane is divided into a grid and the downflow is measured using a thermoanemometer held in place by a ring stand. The individual readings are recorded on a numbered report; the readings are averaged and compared to the acceptable range listed by the manufacturer, but is generally between 80 fpm and 100 fpm.

The device used to measure airflow velocity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM442332003 which was last calibrated on February 17, 2025 and due for recalibration on February 16, 2026. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-1 which is available upon request.

2. HEPA Filter Leak Test

This test is performed by generating a challenge aerosol at the intake of the cabinet. This aerosol is provided as a challenge to the HEPA filter within the cabinet. The HEPA filter is then tested for leaks by scanning the face of the filter, the seal and the frame for penetrations using an aerosol photometer. Minor leaks may be repaired. Any by-pass not corrected will result in failure.

The challenge liquid used was Poly Alpha Olefin (PAO). The challenge aerosol was generated by multiple Laskin nozzles supplied by a compressor(s) providing 100 liters per minute at 20 psi per nozzle.

The aerosol photometer used was a calibrated linear photometer manufactured by TEC Services, Inc. the model PH-4 serial #1944 last calibrated on February 11, 2025 and due for recalibration on February 10, 2026. The most recent calibration report is located in Section 6. The photometer probe is an isokinetic probe.

An upstream challenge could not be measured because of inaccessibility. Therefore, an internal calibration of the aerosol photometer was utilized using the following formula:

$$C_2 = NC_1 \quad \frac{Q_1}{Q_2}$$

Where: C_2 is the full scale photometer setting based upon manufacturers calibration data.
N is the number of Laskin nozzles used.
C_1 µg/L per nozzle when discharged into a flow rate of Q_1 (38 m^3/min).
Q_1 38 m^3/min
Q_2 Volume of air measured in m^3/min

In this case*:
*The values shown here for Q_2 and C_2 for each calculation are rounded for brevity.

HLF-72-A (UA) (S# HLF000645)
Full scale reading represents 28µg/L
(2) x (10) x 38 ÷ 27.25 = 27.89

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-9 which is available upon request.

3. Visual Smoke Pattern Test

This test is designed to give a visual confirmation of the air direction, and airflow patterns. It is considered acceptable when the smoke exhibits a smooth unidirectional laminar flow of air, with no dead spots or reflux.

This test is designed to give a visual confirmation of airflow patterns. There are two separate and distinct tests. Induction Leak/Backstreaming Test and Airflow Smoke Pattern Test. The overall result is considered to be acceptable only if each individual test is acceptable.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-7 which is available upon request.

4. Illumination and Sound Tests

These tests are related to worker comfort and do not require a Pass/Fail.

They are considered secondary tests. More specific testing criteria are documented in MEDREP-Proc-4 and MEDREP-Proc-6 which are available upon request.

Summary of Containment Ventilated Enclosure Certification Procedure

The purpose of this sequence of tests is to demonstrate safe, consistent operation of the ventilated enclosure . That the device is capable of capturing, containing and carrying away fumes generated in the work area.

There are a number of tests performed to confirm safe operation, these are:

1. Face Velocity

With the sash placed at the sash stop, (at 7.25") the face of the ventilated enclosure opening is divided into a grid pattern that is 12" square. A single velocity reading is taken in the center of each square foot along the vertical plane of the front opening. The individual readings are recorded and averaged. The most widely requested target average face velocity is 100 fpm. This test is also known as the Inflow velocity or face velocity grid test.

The device used to measure airflow velocity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM442332003 which was last calibrated on February 17, 2025 and due for recalibration on February 16, 2026. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-1 which is available upon request.

2. HEPA Filter Leak Tests

This test is performed by generating a challenge aerosol within the work area of the device. This aerosol is provided as a challenge to the exhaust HEPA filter. The HEPA filter is then tested for leaks by scanning the face of the filter, the seal and the frame for penetrations using an aerosol photometer. Minor leaks may be repaired. Any by-pass not corrected will result in failure.

The challenge liquid used was Poly Alpha Olefin (PAO). The challenge aerosol was generated by multiple Laskin nozzles supplied by a compressor(s) providing 100 liters per minute at 20 psi per nozzle.

The aerosol photometer used was a calibrated linear photometer manufactured by TEC Services, Inc. the model PH-4 serial #1944 last calibrated on February 11, 2025 and due for recalibration on February 10, 2026. The most recent calibration report is located in Section 6. The photometer probe is an isokinetic probe.

An upstream challenge could not be measured because of inaccessibility. Therefore, an internal calibration of the aerosol photometer was utilized using the following formula:

$$C_2 = NC_1 \quad \frac{Q_1}{Q_2}$$

Where: C_2 is the full scale photometer setting based upon manufacturers calibration data.
N is the number of Laskin nozzles used.
C_1 µg/L per nozzle when discharged into a flow rate of Q_1 (38 m^3/min).
Q_1 38 m^3/min
Q_2 Volume of air measured in m^3/min

In this case*:
*The values shown here for Q_2 and C_2 for each calculation are rounded for brevity.

P5-48-HEAD-A (S# PB003500)
Full scale reading represents 139µg/L
(2) x (10) x 38 ÷ 5.46 = 139.07

P5-48-HEAD-A (S# PB003503)
Full scale reading represents 130µg/L
(2) x (10) x 38 ÷ 5.86 = 129.66

P5-48-HEAD-A (S# PB003501)
Full scale reading represents 179ug/L
(2) x (10) x 38 ÷ 4.25 = 178.93

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-9 which is available upon request.

3. Smoke Visualization

This test is designed to give a visualization of the hood's ability to contain vapors. Using an ampule containing titanium tetrachloride, four distinct air patterns are evaluated.

1. The operation of the bottom air foil is tested by running the ampule under the air foil from one side to the other.
2. Smoke shall be discharged from the ampule along both walls and the floor of the hood in a line parallel to the hood face and 6 inches behind the face and along the top of the face opening
3. A stream of smoke is discharged from the ampule in an 8 inch diameter circle on the back of the ventilated enclosure. Air movement toward the front shall be defined as reverse flow and the lack of air movement shall be defined as dead air space.
4. Smoke shall be generated by the ampule at the work surface and along all equipment in the hood. All smoke shall be carried to the back of the hood and exhausted out.

If there is any visible smoke flow out of the front of the ventilated enclosure, the hood fails the test. This test is also known as the Flow Visualization test and the Local Visualization Challenge.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-44 which is available upon request.

4. Illumination and Sound Tests

These tests are related to worker comfort and do not require a Pass/Fail.

They are considered secondary tests. More specific testing criteria are documented in MEDREP-Proc-4 and MEDREP-Proc-6 which are available upon request.

TSI does hereby certify that the above described instrument conforms to the original manufacturer's specification (not applicable to As Found data) and has been calibrated using standards whose accuracies are traceable to the United States National Institute of Standards and Technology (NIST) or has been verified with respect to instrumentation whose accuracy is traceable to NIST, or is derived from accepted values of physical constants. TSI's calibration system is registered to ISO-9001:2015.

Certification

Particle Measuring Systems certifies that the instrument listed above meets or exceeds manufacturing specifications and meets the requirements of ISO 21501-4:2018. It has been calibrated using equipment and/or standards whose accuracies are traceable to the National Institute of Standards and Technology (NIST), or have been derived from acceptable values of natural physical constants, or by the ratio type of self-calibration. Counting Efficiency determined by digital output.

This instrument was calibrated in accordance with the Particle Measuring Systems quality system documentation which meets ISO 9001:2015 requirements. The results contained within this calibration certificate relate only to the item calibrated. This certificate may not be reproduced, except in full, without written consent from Particle Measuring Systems.

Particle Measuring Systems meets applicable requirements set forth in ISO/IEC 17025:2017 (as accredited by A2LA, certificate # 3952.01). Reported uncertainties have been calculated in accordance with the principals expressed in the GUM and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of K=2. Expanded uncertainties for 17025 accredited parameters are marked accordingly. Statements of conformity are based upon a binary decision rule, as defined in ILAC G8, where the acceptance limit is equal to the specification limit and a PASS indicates the measured value is within the acceptance limit and a FAIL indicates the measured value is outside the acceptance limit and the associated measurement uncertainty does not exceed the specification limit.

TSI Incorporated does hereby certify that the above described instrument conforms to the original manufacturer's specifications (not applicable to As Found data) and has been calibrated using standards whose accuracies are traceable to the National Institute of Standards and Technology within the limitations of NIST's calibration services or have been derived from accepted values of natural physical constants or have been derived by the ratio type of self calibration techniques. The following ratios express the expanded uncertainty at a confidence level of 95% (i.e. with a coverage factor k =2) of the calibration facilities with respect to the instrument being calibrated: for barometric pressure ≥ 6.7:1; for differential pressure ≥ 3:1; for temperature ≥ 1.16:1. TSI is registered to ISO-9001:2015, Quality Assurance Requirements. This report may not be reproduced, except in full, unless permission for the publication of an approved abstract is obtained in writing from the calibration organization issuing this report.

CERTIFICATE OF COMPLIANCE

CERTIFICATE OF COMPLIANCE

We hereby certify that the cleanroom facility
Located at St. Luke Compounding Pharmacy,
New Port Richey, Florida has been fully inspected
July 02 & 03, 2025
for compliance
To the requirements set forth in:

ISO 14644-1:2015
USP<800>
USP<797>
64B16-27.797
CAG-003

We are pleased to announce that this facility
Meets the standards of compliance for an
ISO Class 7 & 8 environment.

This facility shall be retested prior to
January 31, 2025

We attest the above data to be true and correct.

SUMMARY

St. Luke Compounding Pharmacy
New Port Richey, Florida
ISO Class 5 Biological Safety Cabinet

SUMMARY

Of Testing Performed September 16, 2025

The purpose of this inspection was to prove continued compliance, after repairs were made within the device to the requirements of a laminar flow ISO Class 5 environment as defined by ISO 14644-1:2015, referenced in USP<797>, 64B16-27.797 and other applicable documents listed herein.

This scheduled inspection is part of an ongoing semi-annual monitoring and periodic test program designed to document long-term compliance. The most recent inspections were performed on December 20, 2024 & January 08, 2025.

Following the testing and based upon the results of those tests listed, the device was found to be in conformance and a certificate of compliance has been issued and affixed to the device.

Testing Performed by: Terry Lugviel
IEST Level 2 Technician

Report prepared by: Caroline Arnold
Tier 2 Compliance Officer

Report approved by: James Rice
Tier 2 Compliance Officer

Respectfully submitted: October 03, 2025

The tests performed upon the device were:

1. Airflow Adjustment for Class II BSCs	MEDREP-Proc-1
2. Testing Pressure and Airflow in a Duct	MEDREP-Proc-2
3. Testing Fluorescent Illumination Level	MEDREP-Proc-4
4. Testing Sound Level	MEDREP-Proc-6
5. Smoke Pattern in a Device	MEDREP-Proc-7
6. Check Leveling of a Device	MEDREP-Proc-8
7. Leak Testing HEPA Filters for BSCs	MEDREP-Proc-9
8. Performing the Site Installation Assessment	MEDREP-Proc-39
9. Testing Device Alarm Functions	MEDREP-Proc-40
10. Non-Viable Particle Counts in a Device	MEDREP-Proc-48
11. Check/Adjust Gages	MEDREP-Proc-61

Summary of BSC Particle Count Test Procedure

The purpose of this test is to demonstrate compliance of the biological safety cabinet clean air device tested to the requirements specified in the International Organization for Standardization document ISO 14644-1:2015.

USP <797> requires all biological safety cabinets, laminar flow clean benches and isolators used for compounding to be an ISO Class 5 environment. This test is also referred to as a Particle Count Survey or an Airborne Particle Count.

The number of sample locations was 6. One sample in each corner of the work surface, six inches from each wall, and two more samples taken down the center of the work surface equally separated to represent the entire work zone. This number far exceeds the minimum number required by using the formula referenced in ISO 14644-1:2015.

USP <797> requires that non-viable particle counts be sampled within all PECs under dynamic operating conditions. In this case, the number of sample locations was 1. This sample is taken within close proximity to the direct compounding area.

The amount of air sampled at each location was 1.0 cubic foot, or 28.3 cubic liters, which exceeds the minimum volume required at each sample location determined by the following equation:

$$V_s = \frac{20}{Cn,m} \times 1{,}000$$

Where: Vs is the minimum single sample per location expressed in liters.

$C_{n,m}$ is the class limit (number of particles per cubic meter) for the largest considered particle size specified.

20 The defined number of particles that could be counted if the particle concentration were at the class limit.

For ISO Class 5: Vs = 24.04 liters
[20 ÷ 832 x 1,000 = 24.04]

The particle counter sampled at a rate of 1.0 cfm through an isokinetic probe which was oriented upward and held in a stand located at a height of 6 inches above the work surface and attached to the counter by HYTREL PVC tubing which does not exceed 10 feet in length. Each location was sampled for a period of one minute and the reading were then normalized to represent a cubic foot and a cubic meter.

The equipment used is a discrete-particle counter (DPC) manufactured by Particle Measuring Systems, Inc. the model Lasair III_310C serial #103435 which was last calibrated on June 23, 2025 and due for recalibration on June 22, 2026. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-48 which is available upon request.

The above referenced testing procedure meets test methods outlined in the following documents:

IEST-G-CC1001	Counting Airborne Particles for Classification and Monitoring of Cleanrooms and Clean Zones
IEST-RP-CC002.4	Unidirectional-Flow, Clean Air Devices
IEST-RP-CC013	Calibration Procedures and Guidelines for Select Equipment Used in Testing Cleanrooms and Other Controlled Environments
ISO 14644-1:2015	Classification of air cleanliness
ISO 14644-2:2015	Specifications for testing and monitoring to prove continued compliance with ISO 14644-1
ISO 14644-3:2019	Test Methods
USP <797>	Guidebook to Pharmaceutical Compounding-Sterile Preparations
64B16-27.797	The Standards of Practice for Compounding Sterile Products
CAG-003	CETA Certification Guide for Sterile Compounding Facilities
CAG-008	CETA Certification Matrix for Sterile Compounding Facilities

Section 4

SAMPLE METHODOLOGY

Summary of BSC Certification Procedure

The purpose of this sequence of tests is to demonstrate compliance of the Biological Safety Cabinet(s) to the requirements set forth by the manufacturer of the cabinet, NSF/ANSI 49-2022 and other requirements which may apply. Additionally, USP <797> requires all biological safety cabinets, laminar flow clean benches and isolators used for compounding to be an ISO Class 5 environment.

There are a number of tests performed to comply with these requirements. In addition to the non-viable particle count test, these are:

1. Downflow Velocity Profile Test

The velocity of the air moving downward through the work area is measured in a plane 4 inches above the working height of the front sash. This plane is divided into a grid and the downflow is measured using a thermoanemometer held in place by a ring stand. The individual readings are recorded on a numbered report; the readings are averaged and compared to the acceptable range listed by the manufacturer.

The device used to measure airflow velocity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM441603001 which was last calibrated on June 02, 2025 and due for recalibration on June 01, 2026. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-1 which is available upon request.

2. Inflow Velocity Test

The velocity is the air moving inward through the work access opening and this airflow may be measured or calculated. The individual readings are recorded on a numbered report; the readings are averaged and compared to the acceptable range listed by the manufacturer.

In this case, the airflow was measured in a grid pattern above the face of the exhaust HEPA filter. Multiple readings were taken. These velocity readings were recorded and averaged. This average, in fpm was multiplied by the size of the filter opening, in square feet, to determine the volume exiting the cabinet in cfm. This volume is then divided by the area of the front access opening to determine the calculated inflow velocity.

The device used to measure airflow velocity was a thermoanemometer manufactured by Alnor/TSI, Inc. the model AVM440-A serial #AVM441603001 which was last calibrated on June 02, 2025 and due for recalibration on June 01, 2026. The most recent calibration report is located in Section 6.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-1 which is available upon request.

3. HEPA Filter Leak Tests

This test is performed by generating a challenge aerosol within the work area of the cabinet. This aerosol is provided as a challenge to the HEPA filters within the cabinet. The two HEPA filters present are then tested for leaks by scanning the face of the filter, the seal and the frame for penetrations using an aerosol photometer. Minor leaks may be repaired. Any by-pass not corrected will result in failure.

The challenge liquid used was Poly Alpha Olefin (PAO). The challenge aerosol was generated by multiple Laskin nozzles supplied by a compressor(s) providing 100 liters per minute at 20 psi per nozzle.

The aerosol photometer used was a calibrated linear photometer manufactured by TEC Services, Inc. the model PH-4 serial #2149 last calibrated on March 24, 2025 and due for recalibration on March 23, 2026. The most recent calibration report is located in Section 6. The photometer probe is an isokinetic probe.

An upstream challenge could not be measured because of inaccessibility. Therefore, an internal calibration of the aerosol photometer was utilized using the following formula:

$$C_2 = NC_1 \quad \frac{Q_1}{Q_2}$$

Where: C_2 is the full scale photometer setting based upon manufacturers calibration data.
N is the number of Laskin nozzles used.
C_1 µg/L per nozzle when discharged into a flow rate of Q_1 (38 m^3/min).
Q_1 38 m^3/min
Q_2 Volume of air measured in m^3/min

In this case*:
*The values shown here for Q_2 and C_2 for each calculation are rounded for brevity.

AC2-6S9-NS (S# 2024-204033)
Full scale reading represents 31µg/L
(2) x (10) x 38 ÷ 24.55 = 30.95

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-9 which is available upon request.

4. Visual Smoke Pattern Test

This test is designed to give a visual confirmation of the air direction, and airflow patterns. It is considered acceptable when the smoke exhibits a smooth unidirectional laminar flow of air, with no dead spots or reflux.

It is separated into four separate and distinct tests:

1. Downflow test
2. View screen retention test
3. Work opening edge retention test
4. Sash/window seal test

The overall result is considered to be acceptable only if each individual test is acceptable.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-7 which is available upon request.

5. Illumination and Sound Tests

These tests are related to worker comfort and do not require a Pass/Fail.

They are considered secondary tests. More specific testing criteria are documented in MEDREP-Proc-4 and MEDREP-Proc-6 which are available upon request.

6. Alarm Test

Biological Safety Cabinets with sliding sash (view screens) also contain an alarm to signal when the sash is not at the recommended height.

Biological Safety Cabinets which are connected to an exhaust duct are required to have an audible/visual alarm to warn in the event of exhaust system failure. The alarm present must be tested as such:

Type A biological safety cabinets:

Reduce the exhaust airflow gradually until the alarm sounds. The alarm must sound before canopy containment is lost by visual confirmation using a smoke source.

Type B biological safety cabinets:

Once the cabinet has been set within the acceptable airflow range, reduce the exhaust volume by 20% and verify that the audible and visual alarms are activated within 15 seconds. At that point the internal supply fan must be interlocked to shut down.

This test is considered a primary test and should be performed semi-annually. More specific testing criteria are documented in MEDREP-Proc-40 which is available upon request.

Certification

Particle Measuring Systems certifies that the instrument listed above meets or exceeds manufacturing specifications and meets the requirements of ISO 21501-4:2018. It has been calibrated using equipment and/or standards whose accuracies are traceable to the National Institute of Standards and Technology (NIST), or have been derived from acceptable values of natural physical constants, or by the ratio type of self-calibration. Counting Efficiency determined by digital output.

This instrument was calibrated in accordance with the Particle Measuring Systems quality system documentation which meets ISO 9001:2015 requirements. The results contained within this calibration certificate relate only to the item calibrated. This certificate may not be reproduced, except in full, without written consent from Particle Measuring Systems.

Particle Measuring Systems meets applicable requirements set forth in ISO/IEC 17025:2017 (as accredited by A2LA, certificate # 3962.01). Reported uncertainties have been calculated in accordance with the principals expressed in the GUM and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of K=2. Expanded uncertainties for 17025 accredited parameters are marked accordingly. Statements of conformity are based upon a binary decision rule, as defined in ILAC G8, where the acceptance limit is equal to the specification limit and a PASS indicates the measured value is within the acceptance limit and a FAIL indicates the measured value is outside the acceptance limit and the associated measurement uncertainty does not exceed the specification limit.

Section 9: Statement of Responsibility - MUST BE COMPLETED by an Authorized Person (NAC 639.945)

Statement of Responsibility

1. I am the Chief Executive Officer (title) for Tailor Made Compounding (name of Pharmacy) and in that capacity, I am authorized to speak on the Pharmacy's behalf.
2. I understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be responsible for any violations of pharmacy law that may occur in the Pharmacy owned by such owner(s), shareholder(s), member(s), or partner(s).
3. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) may be named in any action taken by the Nevada State Board of Pharmacy against the Pharmacy.
4. I further understand and acknowledge that any owner(s), shareholder(s), member(s), or partner(s) cannot require or permit the pharmacist(s) in said Pharmacy to violate any provision of local, state, or federal laws or regulations pertaining to the practice of pharmacy.
5. I further understand and acknowledge that Nevada law requires that each pharmacy located inside the State of Nevada employ only pharmacists, intern pharmacists, pharmaceutical technicians, and technicians in training that are licensed by the Nevada State Board of Pharmacy. (NRS 639.100).
6. I further understand and acknowledge that Nevada law requires that each pharmacy located outside the State of Nevada engaged in providing pharmacy services into Nevada employs at least one pharmacist licensed by the Nevada State Board of Pharmacy who will be responsible for any prescription dispensed to a patient located in Nevada and responsible for any acts or omissions of pharmacy personnel who are not registered with the Board. (NRS 639.2328).

Telephone of Designated Person(s): 859-887-0013

Section 2: Sterile Compounding Questions (Use a separate piece of paper if additional space is needed.)

1. What risk level sterile compounding will your facility be performing (check all that apply)?

☐ Category 1 ☐ Category 2 ■ Category 3

If you marked "**Category 3**", you must also complete **section 4**.

2. If compounding Category 2 products is the location performing sterility and endotoxin testing (if required) to obtain extended beyond-use dates? ☐ Yes ☐ No

3. If compounding Category 2 products is the location performing aseptically processed CSPs or terminally sterilized CSPs? ☐ Aseptic ☐ Terminal

4. Is the pharmacy following the new garbing requirements listed in the revised USP-797 guidelines? ■ Yes ☐ No

5. When was the most recent certification for the ISO classified areas? Suite C: 8/20/2025; Suite A: 12/31/2025

6. What is the frequency of the recertification for the ISO classified areas? Biannually

7. Were there any follow-up items required from the most recent certification report? ☐ Yes ■ No

8. If preparing Category 2 or Category 3 CSPs from non-sterile starting components are the pre-sterilization procedures such as weighing and mixing completed in an ISO Class 8 or better environment? ■ Yes ☐ No

9. If compounding Category 1 CSPs and Category 2 CSPs how often is surface sampling of all classified areas and pass-through chambers conducted? Not Applicable

10. Will you be performing sterile hazardous drug compounding? ■ Yes No

If you marked "**Yes**", you must also complete **section 3**.

11. List the sterile compounded products that you will be compounding for Nevada patients or consumers:

See Attachment

12. What laboratory performs your sterility or endotoxin testing?

Name: See Attachment for Laboratories used for sterility and endotoxin testing.

Address: _____

City: _____ State: _____ Zip: _____

Telephone: _____

13. What is your procedure for visual inspection of compounded sterile products?

TMC SOP 1050 - Review and Release of Product, outlines the procedure for the visual inspection of compounded sterile products. A visual inspection is performed by supervising pharmacists, where the following parameters are reviewed for product evaluation and approval for order fulfillment:
Inspect to ensure the labeling on the product matches the compounding record. Inspect to determine if physical appearance is as defined in the master formulation record. Inspect to ensure the product is free of foreign matter (e.g. particles or fibers), discoloration or other defects. Inspect container closure system for integrity (e.g. leakage, cracks in the container, improper seals).

14. How often do you perform glove fingertip and medial fill testing?

Garbing competency including a gloved fingertip thumb test (GFT), media fill with a post GFT, and surface sample of the direct compounding area are performed quarterly. GFTs post garbing are also performed weekly.

15. Describe your initial and ongoing training program for all personnel performing sterile compounding:

See Attachment

16. Describe the cleaning procedure for your primary and secondary engineering controls, including the frequency of cleaning and the names of cleaning, disinfectant, sporicidal, and/or deactivation and decontamination agents used:

See Attachment

17. Who performs the sterile compounding process at your facility?

Compounding Technicians under the supervision of Laboratory Management and Supervising Pharmacists.

18. Who is responsible and accountable for the sterile compounding process at your facility?

The Pharmacist-in-Charge has overall responsibility for the operation of the facility. Supervising pharmacists are responsible for the direct supervision of sterile compounding. Laboratory management is responsible for the direct oversight of sterile compounding to ensure compliance with applicable standards and regulations.

19. If products are shipped/mailed, what shipping conditions are used to ensure product safety/efficacy?

See Attachment.

Section 3: Sterile Hazardous Compounding Questions (Complete this section ONLY if you be performing Sterile Hazardous Compounding.)		
1. What type of primary engineering controls will you be using in your facility? An externally vented containment ventilated enclosure (CVE) is used for manipulation, premixing/weighing, of non-sterile components and an externally vented Class II Biological Safety Cabinet (BSC) is used for all sterile operations.		
2. Are you complying with all USP 800 guidelines?	■ Yes	No
3. Have your employees who compound with hazardous drugs signed an acknowledgement that they understand the risks associated with this process?	■ Yes	No
4. Is your BSC or CACI vented 100% to the outside?	■ Yes	No
5. Do you have a negative pressure buffer room at your facility?	■ Yes	No
6. Will you be compounding with antineoplastic HDs or HD API?	■ Yes	No
7. If yes, are the drugs stored in an externally ventilated, negative pressure room?	■ Yes	No
8. Will you be utilizing a closed system transfer device?	Yes	■ No
9. If yes, list the name of the device: Not Applicable		

10. What information is provided to the patient or consumer on the proper handling and disposal of hazardous drugs products/containers?

For sterile compounded products there are three mechanisms for notifying the patient or consumer of the proper handling and disposal of hazardous drugs.

- The immediate container is labeled with the hazardous drug category and instruction to dispose of properly.
- The prescription label also has auxiliary labels that include the hazardous drug category and instruction to dispose of properly.
- A Pharmacy Information sheet is also supplied to the patient with each shipment that provides instructions and considerations for the use of chemotherapy rated gloves. The sheet also provides links to the FDA website for appropriate disposal of medications.

11. Describe your initial process for training new employees prior to compounding sterile hazardous drugs?

The training program consists of didactic and performance competency-based activities. The Standard Operating Procedure (SOP) 1046 Hazardous Communication Program provides the general framework for this training, with supporting SOPs and competency training based on specific topics. Topics included below:

- Identification and acknowledgment of Hazardous Drugs (HDs) via and internal NIOSH list.
- Identification of Hazardous drugs via container labels for raw materials and compounded products.
- Identification of areas of the facility where HDs are present.
- Safety Data Sheets (SDS), including location and education of the various sections of the SDS.
- Proper use of Personal Protective equipment
- Proper usage of the Containment Primary Engineering Controls
- Cleaning Requirements and proper technique
- Spill Management
- Waste Management and proper disposal requirements for HDs
- Handling of HDs including potential routes of exposure.
- Response to known or suspected HD exposure.

Individuals are paired with trained staff for demonstration and observation of skills. Trainees are required to perform skills according to defined requirements prior to being able to work independently as verified through observational evaluation. Training activities are repeated annually and are documented in the electronic quality management system.

Section 4: Sterile Category 3 Compounding Questions (Complete this section ONLY if you will be performing Category 3 Compounding.)

1. List the specific Category 3 sterile products that your facility compounds:

See Attachment

2. What is the frequency for ongoing garbing, gloved fingertip and thumb sampling, and media fill testing for compounding personnel?

Sterile compounding technicians are required to perform the following on a quarterly basis: Garbing competency including a gloved fingertip thumb test (GFT), media fill with a post GFT, and surface sample of the direct compounding area. Additionally, a GFT post garbing are performed on a weekly basis for active compounding technicians.

3. Is the pharmacy meeting all of the additional garbing requirements for compounding Category 3 CSPs as defined by the revised USP-797 guidelines? ■ Yes No

4. What is the frequency for completing volumetric active air sampling?

Air sampling is conducted in compliance with USP <797> for compounding Category 3 sterile products. Identified locations within the ISO 8, ISO 7, and ISO 5 classified areas are sampled monthly.

5. What is the frequency for completing surface sampling? Surface sampling is conducted in compliance with USP <797> for compounding Category 3 sterile products. Identified locations within ISO 8, ISO 7 and ISO 5 classified areas are sampled weekly. Sampling of the direct compounding area is conducted after every batch.		
6. What is the frequency for using sporicidal agents? A Sporicidal agent (PeridoxRTU®) is utilized during weekly and monthly cleaning activities.		
7. Is an endotoxin test performed for all products compounded from one or more nonsterile component?	■ Yes	No
8. Is the BUD assigned supported by stability data obtained using a stability-indicating analytical method?	■ Yes	No

I certify under penalty of perjury that the information contained in this form is accurate, true and complete in all material respects. I understand that making any false representation in this form is a crime under NRS 639.281. I understand that, pursuant to NRS 239.010, this entire form and any portion thereof is a public record unless otherwise declared confidential by law, and will be considered by the Nevada State Board of Pharmacy at a public meeting pursuant to NRS 241.020. In the event the form is approved I agree to comply with all applicable federal and state statutes and regulations governing this license or registration and understand that any violation may result in discipline.

Section II
11. List the sterile compounded products that you will be compounding for Nevada patients or consumers.

Estradiol Cypionate (GSO) 10mg/mL Injectable
Glutathione 200mg/mL Injectable
Liraglutide/Glycine 6mg/5mg/mL Innjectable
Methionine/Inositol B12 (Cyanocobalamin) 25mg/50mg/1mg/mL Injectable
Methylcobalamin 10mg/mL Injectable
NAD+ 200mg/mL Injectable
Pentosan Polysulfate Sodium 250mg/mL Injectable
PT-141 (Bremelanotide) 10,000mcg/mL Injectable
Semaglutide 2.5mg/mL Injectable
Semaglutide 5mg/mL Injectable
Semaglutide/Glycine 1mg/5mg/mL Injectable
Semaglutide/Glycine 2.5mg/5mg/mL Injectable
Semaglutide/Glycine 5mg/5mg/mL Injectable
Sermorelin 2000mcg/mL Injectable
Sermorelin/Glycine 2000mcg/5mg/mL Injectable
Testosterone Cypionate (GSO) 200mg/mL Injectable
Testosterone Cypionate (MCT) 200mg/mL Injectable

12. What laboratory performs your sterility and endotoxin testing

Eagle Analytical
11111 S. Wilcrest Drive, Suite 1000
Houston, TX 77099
Phone: 800-745-8916

Prompt Praxis Laboratories
150 N. Fairway Drive, Suite 148
Vernon Hills, IL 60061
Phone: 847-859-3850

15. Describe your initial and ongoing training program for all personnel performing sterile compounding.

The training program consists of didactic and performance competency-based activities based on the Standard Operating Procedures. Individuals are paired with trained staff for demonstration and observation of skills. Trainees are required to perform skills according to defined requirements prior to being able to work independently. Training activities are repeated annually and are documented in an electronic quality management system.

Initial training specific to sterile compounders includes:

- Garbing and Hand hygiene. Garbing assessment is performed in triplicate supported by GFTs with each assessment.
- Cleaning and disinfection of the sterile preparation areas and cleanrooms
- Cleanroom Practices and Sterile Preparation Room Practices, including principles of movement of materials, movement of personnel, proper use of PECs, and principles of HEPA unidirectional airflow within the PECs
- Aseptic technique, including Media Fill completion with a post garbing GFT, post compounding GFT, and a surface sample of the direct compounding area.
- Various equipment SOPs
- Preparation of supplies for sterile compounding including sterilization and depyrogenation processes.
- Performance competency of compounding proactive including documentation of the compounding process, calculations, measuring, mixing.

Ongoing Training

- Garbing competency GFTs are repeated weekly
- Aseptic technique media fill is performed quarterly. This includes a Garbing GFT and a post compounding GFT with a surface sample of the direct compounding surface.
- All other trainings are repeated annually.

16. Describe the cleaning procedure for your primary and secondary engineering controls, including the frequency of cleaning and the names of cleaning, disinfectant, sporicidal, and/or deactivation and decontamination agents used:

Cleaning Solutions

Cleaning, disinfecting solutions used within the PEC, C-PEC, and the SCA are sterile. Lint free wipers are used in application of all solutions.

- Cleaner/disinfecting: Contec® Healthcare TB1-3300™ Disinfectant with a dwell time of one (1) minute. This solution is used for daily cleaning in non-hazardous sterile cleanrooms.

- Sporicidal disinfectant: Contec® PeridoxRTU® with a dwell time of three (3) minutes. This solution is used for weekly and monthly cleanings in the non-hazardous
- Deactivation and decontamination solution: Contec® PeridoxRTU® with a dwell time of three (3) minutes.
- Sterile IPA with a sterility assurance of 10-6 SAL.

After dwell time has passed for each solution, all surfaces are cleaned with sterile 70% IPA.

Cleaning Procedure

- PEC and C-PEC work surfaces are cleaned:
  - Beginning of compounding day
  - Between batches
  - When visibly soiled
  - End of compounding day including the equipment inside the PEC or C-PEC.
- Under C-PEC work surface is cleaned monthly (limited to sterile hazardous compounding as PECs do not have a removable work tray)
- Secondary engineering controls non-hazardous
  - Cleaned daily and weekly including passthroughs, work surfaces outside of the PEC and floors
  - Cleaned monthly including ceilings, walls, doors, doorframes, storage shelving and bins, equipment outside of the PEC.
- Secondary engineering controls hazardous
  - Cleaned daily including passthroughs, work surfaces outside of the PEC and floors
  - Cleaned monthly including ceilings, walls, doors, doorframes, storage shelving and bins, equipment outside of the PEC.

19. If products are shipped/mailed, what shipping conditions are used to ensure product safety/efficacy?

The Pharmacy maintains written procedures to ensure compounded medications requiring special handling or temperature control are transported in a manner that preserves product integrity and patient safety. Compounded medications are transported in accordance with TMC SOP 1031 - Transporting of Compounded Products, which defines shipping requirements based on product-specific handling and temperature needs. All medications are secured within a dram or secured external product container to protect the product from leakage or breakage. Temperature studies on final shipping package configuration have been performed to determine suitability of the packaging configuration to maintain appropriate temperature for temperature sensitive products. Packaging configurations include insulated shippers and cold packs used as appropriate. Shipments are labeled with required handling instructions (e.g., "Refrigerate Upon Arrival") and sent via contracted carriers with tracking, with expedited delivery selected for refrigerated products.

Section IV

1. List the specific Category 3 sterile products that your facility compounds.

Estradiol Cypionate (GSO) 10mg/mL Injectable

Glutathione 200mg/mL Injectable

Liraglutide/Glycine 6mg/5mg/mL Innjectable

Methionine/Inositol B12 (Cyanocobalamin) 25mg/50mg/1mg/mL Injectable

Methylcobalamin 10mg/mL Injectable

NAD+ 200mg/mL Injectable

Pentosan Polysulfate Sodium 250mg/mL Injectable

PT-141 (Bremelanotide) 10,000mcg/mL Injectable

Semaglutide 2.5mg/mL Injectable

Semaglutide 5mg/mL Injectable

Semaglutide/Glycine 1mg/5mg/mL Injectable

Semaglutide/Glycine 2.5mg/5mg/mL Injectable

Semaglutide/Glycine 5mg/5mg/mL Injectable

Sermorelin 2000mcg/mL Injectable

Sermorelin/Glycine 2000mcg/5mg/mL Injectable

Testosterone Cypionate (GSO) 200mg/mL Injectable

COMPLIANT

Comments

In process of implementing updated SOP(s) that align with revised USP 797 requirements.

Training and Garbing

Documentation all compounding personnel passed initial and annual/semi-annual written exam for appropriate risk level for cleaning and disinfecting.

COMPLIANT

Comments

Tracking electronically.

Documentation all compounding personnel passed initial and annual/semi-annual written exam for hand hygiene and garbing.

COMPLIANT

Documentation all compounding personnel passed initial and annual/semi-annual written exam for aseptic technique.

COMPLIANT

Visually observed and appropriately documented competencies of cleaning and disinfecting, initially and at the completion of media fill test, and including environmental services, if applicable and when appropriate.

COMPLIANT

Comments

Compliance based on review of ongoing training records. Initial assessment of cleaning/disinfection not provided for JS.

Visually observed and appropriately documented competencies of hand hygiene and garbing, initially with initial gloved fingertip sample with zero growth.

COMPLIANT

Training and Garbing *(continued)*

Visually observed and appropriately documented competencies of hand hygiene and garbing annually/semi-annually done upon completion of aseptic media fill test performed annually/semi-annually with up to 3 total CFUs.

COMPLIANT

Visually observed and appropriately documented competencies of aseptic technique, initially and annually/semi-annually for appropriate risk level under most challenging conditions.

COMPLIANT

Training of any equipment used.

COMPLIANT

Comments

incubator, air sampler

Documentation of immediate reinstruction, reevaluation and retesting of compounding personnel who fail any testing.

NOT INSPECTED

Comments

No failures reported.

Written policy personnel cannot compound if have sunburn, illness, open sores, etc.

COMPLIANT

Personnel remove outer garments, make-up, visible jewelry (hand, wrist, ears, lips, eyebrow piercings).

COMPLIANT

Personnel keep nails short and natural.

COMPLIANT

Garbing

Garb from dirtiest to cleanest, using the line of demarcation appropriately.

COMPLIANT

Performs hand washing appropriately up to the elbows for 30 seconds and uses a nail pick.

COMPLIANT

Use waterless, alcohol based surgical scrub with persistent activity. Has chlorhexidine/emollients: Purell Surgical Scrug; Avagard; Sterillium; Surgicept; Triseptin; Alcare.

COMPLIANT

Sterile gloves donned appropriately.

COMPLIANT

Dispose of gown when leave compounding area or reuse for one shift (nonhazardous).

COMPLIANT

Non-garbed personnel are not entering compounding area.

COMPLIANT

Environment with Ante and Buffer Rooms

Floor is smooth, impervious, free from cracks and crevices, and seams are heat sealed.

COMPLIANT

Environment with Ante and Buffer Rooms *(continued)*

Ceiling tiles are sealed, free from cracks and crevices, and seams where walls and ceiling meet are sealed.

COMPLIANT

Walls are painted with epoxy based paint or other impermeable surface, are smooth, impervious, easily cleanable, and free from cracks and crevices, seams are heat sealed.

COMPLIANT

Non-shedding equipment is used.

COMPLIANT

Limited entry to necessary personnel.

COMPLIANT

Accessories: shelving, chairs, stools, carts easily cleanable and non-permeable, free from cracks and crevices, low particulate generating and limited to necessary equipment in ante and buffer rooms.

COMPLIANT

All items cleaned and disinfected before bringing into buffer room.

COMPLIANT

Ante Room has a sink with hot and cold water and hands dried with lint free non-shedding, disposable paper towels or blow dryer.

COMPLIANT

Environment with Ante and Buffer Rooms *(continued)*

Buffer Room has no sink, drain or water source.

COMPLIANT

Proper utilization of line of demarcation (LOD).

NOT APPLICABLE

HEPA Filters must be on air ducts in the ceiling of ante and buffer rooms.

COMPLIANT

Food, drinks, gum prohibited in compounding area.

COMPLIANT

If LAFW Blower turned off, must run for 30 minutes before using.

NOT INSPECTED

If no physical barrier between the buffer and ante rooms, only performing low and medium risk sterile compounding.

NOT APPLICABLE

If no physical barrier between the buffer and ante rooms, air velocity is at least 40 feet/minute continuously from buffer area across LOD into ante area.

NOT APPLICABLE

Environment with Ante and Buffer Rooms *(continued)*

If no physical barrier between the buffer and ante rooms, air velocity is recorded every shift, a minimum of daily.

NOT APPLICABLE

Pressure is recorded each shift, a minimum of daily.

COMPLIANT

Ante room is positive pressure of at least 0.02 inch water column to general pharmacy.

COMPLIANT

Buffer room is positive pressure of at least 0.02 inch water column to ante room.

COMPLIANT

Temperature is recorded daily.

COMPLIANT

Temperature of buffer room is appropriate.

COMPLIANT

Controlled storage areas for room temperature is 68 to 77 F or 20 to 25 C.

COMPLIANT

Comments

Some temp readings <68F in negative pressure buffer room. Refer to component labels/COA to verify storage conditions are appropriate.

Controlled storage area for cold temperature is 36 to 46 F or 2 to 8 C.

COMPLIANT

Environment with Ante and Buffer Rooms *(continued)*

Controlled storage area for freezer temperature is -13 to 14 F or -25 to -10 C.

NOT INSPECTED

Components store in appropriate humidity, recommended 35% to 60%.

COMPLIANT

Cleaning

Personnel appropriately garbed when cleaning.

COMPLIANT

Comments
Based on SOP and verbal description of process by technician.

Cleaning and disinfecting agent (may be one step cleaning and disinfecting) appropriate for bacteria, viruses, fungi.

COMPLIANT

Cleaning equipment is non-shedding, disposable or dedicated.

COMPLIANT

Daily cleaning of compound area takes place when no compounding is occurring and includes easily cleanable surfaces including counter tops, pass through, etc. and floors.

COMPLIANT

Monthly cleaning of compound area takes place when no compounding is occurring and includes everything in compound area – bins, equipment, ceiling, walls and floor.

COMPLIANT

Cleaning *(continued)*

Cleaning of ISO Class 5 PEC is documented each shift, a minimum of daily.

COMPLIANT

Uses low linting towels to clean ISO Class 5 PEC.

COMPLIANT

Uses germicidal detergent diluted with sterile water if not ready to use, to clean each shift or daily.

COMPLIANT

ISO Class 5 PEC is disinfected between compounding activities.

COMPLIANT

Comments

Based on SOP and verbal description of process by technician.

ISO Class 5 PEC is wiped with sterile water followed by disinfectant after spills or surface contamination.

COMPLIANT

70% sIPA allowed to remain in contact with surface for 30 seconds before compounding.

COMPLIANT

PEC cleaned in correct order of top ,back, sides, racks/poles, items on deck, deck.

COMPLIANT

Comments

Based on SOP and verbal description of process by technician.

Environmental Monitoring: Certification of Ante and Buffer Rooms

All ISO Class 5 PEC and ISO Class 7 and/or ISO Class 8 rooms have been certified as required.

COMPLIANT

Review report from certifier.

Certifier: *Air Source*

COMPLIANT

Date: *4/23/24*

Certification done to CETA guidelines, CAG-003-2006, or similar.

COMPLIANT

Certifier's equipment calibrated to manufacturer standards.

COMPLIANT

Ante room has HEPA filtered air certified to ISO Class 8 for non-hazardous compounding.

COMPLIANT

Ante room has HEPA filtered air certified to ISO Class 7 for hazardous compounding.

COMPLIANT

Buffer room has HEPA filtered air certified to ISO Class 7.

COMPLIANT

ISO Class 7 ante room, minimum of 30 ACPH.

ACPH: *34, 82*

ISO Class 7 ante room, minimum of 30 ACPH. *(continued)*

COMPLIANT

ISO Class 8 ante room, recommended 20 ACPH.

ACPH:

NOT APPLICABLE

ISO Class 7 non-hazardous buffer room, minimum of 30 ACPH with at least 15 from outside source.

ACPH: *280, 273, 150*

COMPLIANT

ISO Class 7 hazardous buffer room, minimum of 30 ACPH.

ACPH: *57*

COMPLIANT

Smoke test performed in PEC in direct compounding area to demonstrate unidirectional airflow under dynamic conditions.

COMPLIANT

Differential pressure measured to be at least positive 0.02 inch water column from ante room to general pharmacy with door closed.

COMPLIANT

Differential pressure measured to be at least positive 0.02 inch water column from buffer room to ante room with door closed.

COMPLIANT

Environmental Monitoring: Certification of Ante and Buffer Rooms *(continued)*

Differential pressure measured to be at least negative 0.01 inch water column from buffer room to positive pressure ISO 7 ante room with door closed.

COMPLIANT

If no physical separation of ante and buffer room, displacement airflow measured requiring air velocity of 40 feet/minute or more from buffer area across LOD into ante room.

NOT APPLICABLE

ISO Class 5 areas not more than 3,520 particles per cubic meter of air, taken under dynamic conditions.

COMPLIANT

ISO Class 7 areas not more than 352,000 particles per cubic meter of air, taken under dynamic conditions.

COMPLIANT

ISO Class 8 areas not more than 3,520,000 particles per cubic meter of air, taken under dynamic conditions.

COMPLIANT

Comments

Pre-ante room (work room)

Room HEPA filters leak tested and repaired if needed.

COMPLIANT

PEC HEPA filters leak tested and repaired if needed.

COMPLIANT

Environmental Monitoring: Certification of Ante and Buffer Rooms *(continued)*

PEC airflow velocity measured.

COMPLIANT

Documentation of viable air and surface sampling shall include date and time of sampling.

COMPLIANT

Documentation of viable air and surface sampling shall include sampling shall include sample locations.

COMPLIANT

Documentation of viable air and surface sampling shall include method of collection.

COMPLIANT

Documentation of viable air and surface sampling shall include frequency of sampling.

COMPLIANT

Documentation of viable air and surface sampling shall include volume of air sampled.

COMPLIANT

Documentation of surface sampling shall include size of surface sampled, 24-30 cm2.

COMPLIANT

Environmental Monitoring: Certification of Ante and Buffer Rooms *(continued)*

Documentation of viable air and surface sampling shall include time of day in relationship to compounding.

COMPLIANT

Documentation of viable air and surface sampling shall include action levels.

COMPLIANT

Viable air sampling performed using active impaction device with appropriate growth media to support bacteria and for high risk compounding fungus, at least every 6 months in all ISO classified areas using 400 – 1000 L of air per sample.

COMPLIANT

Viable air microbial action levels for ISO Class 5: 1000 liters > 1 CFU/m3 or 400 liters > 1CFU/m3.

COMPLIANT

Viable air microbial action levels for ISO Class 7: 1000 liters, > 10 CFU/m3 or 400 liters, > 4CFU/m3

COMPLIANT

Viable air microbial action levels for ISO Class 8: 1000 liters, > 100 CFU/m3 or 400 liters, > 40 CFU/m3

COMPLIANT

Environmental Monitoring: Certification of Ante and Buffer Rooms *(continued)*

Viable surface sampling performed periodically on direct compounding areas, buffer and ante rooms, pass thru and surfaces likely to be contaminated, as applicable, using media supplemented with neutralizing effects of disinfecting agents (TSA with lecithin & Polysorbate 80) and done at the conclusion of compounding.

COMPLIANT

Comments

Must sample p/t if utilized in compounding workflow.

Surface microbial action levels for ISO Class 5, less than 3 CFU/m3.

COMPLIANT

Surface microbial action levels for ISO Class 7, less than 5 CFU/m3.

COMPLIANT

Surface microbial action levels for ISO Class 8, less than 100 CFU/m3.

COMPLIANT

All CFUs analyzed down to the genus with mold, yeast, coagulase positive Staph, gram negative rods requiring immediate Investigation.

COMPLIANT

Comments

per certifier

Exceeded action levels should prompt a re-evaluation of adequacy of personnel work practices, cleaning, operational procedures and/or air efficiency and require an investigation into the source of contamination.

NOT INSPECTED

Comments

Action levels not exceeded.

Environmental Monitoring: Certification of PEC

All ISO Class 5 PECs have been certified as required.

NOT APPLICABLE

Review report from outside agency.

NOT APPLICABLE

Certification done to CETA guidelines, CAG-003-2006, or similar.

NOT APPLICABLE

Certifiers equipment calibrated to manufacturer standards.

NOT APPLICABLE

Smoke test performed in PEC in direct compounding area to demonstrate unidirectional airflow under dynamic conditions.

NOT APPLICABLE

Differential pressure measured to be at least 0.02 inches water column from ante chamber to general pharmacy area.

NOT APPLICABLE

Differential pressure measured to be at least 0.02 inches water column from main chamber to ante chamber.

NOT APPLICABLE

Environmental Monitoring: Certification of PEC *(continued)*

ISO Class 5 areas not more than 3,520 particles per cubic meter of air, taken under dynamic conditions.

NOT APPLICABLE

PEC HEPA filters leak tested and repaired if needed.

NOT APPLICABLE

PEC airflow velocity measured.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include date and time of sampling.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include sample locations.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include method of collection.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include frequency of sampling.

NOT APPLICABLE

Documentation of viable air sampling shall include volume of air sampled.

NOT APPLICABLE

Environmental Monitoring: Certification of PEC *(continued)*

Documentation of surface sampling shall include size of surface sampled, 24-30 cm2.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include time of day in relationship to compounding.

NOT APPLICABLE

Documentation of viable air and surface sampling shall include action levels.

NOT APPLICABLE

Viable air sampling performed using active impaction device with appropriate growth media to support bacteria and for high risk compounding fungus, at least every 6 months in all ISO classified areas using 400 – 1000 liters of air per sample.

NOT APPLICABLE

Viable air microbial action levels for ISO Class 5: 1000 liters > 1 CFU/m3 or 400 liters > 1CFU/m3.

NOT APPLICABLE

Viable surface sampling performed periodically on direct compounding areas using media supplemented with neutralizing effects of disinfecting agents (TSA with lecithin & Polysorbate 80) and done at the conclusion of compounding.

NOT APPLICABLE

Surface microbial action levels for ISO Class 5, less than 3 CFU/m3.

NOT APPLICABLE

Environmental Monitoring: Certification of PEC *(continued)*

All CFUs analyzed down to the genus with mold, yeast, coagulase positive Staph, gram negative rods requiring immediate investigation.

NOT APPLICABLE

Exceeded action levels should prompt a re-evaluation of adequacy of personnel work practices, cleaning, operational procedures and/or air efficiency and require an investigation into the source of contamination.

NOT APPLICABLE

Compounding Procedures

Documentation of equipment maintenance and calibration logs.

NOT INSPECTED

Objects that shed prohibited from buffer room or compounding area of CAI/CACI: pencils, cardboard, paper towels, cotton gauze pads.

COMPLIANT

Essential paper products (syringe overwrap, work records in protective plastic sleeves) are wiped down with 70% sIPA in ante room before bringing into buffer room or before placing in the ante chamber of CAI/CACI.

NOT INSPECTED

Required supplies wiped down with 70% sIPA (or removing outer wrap) as item introduced into aseptic work space.

COMPLIANT

Compounding Procedures *(continued)*

Syringes, needles, tubing opened only In ISO Class 5 PEC.

COMPLIANT

Personnel use correct aseptic technique, compounding in first air.

COMPLIANT

Personnel routinely inspecting sterile gloves for wear and tear and replace as necessary.

NOT INSPECTED

Personnel routinely disinfecting sterile gloves with 70% sIPA prior to entering and when re-entering ISO Class 5 area and touching non-sterile objects.

COMPLIANT

Personnel ascertain CSP ingredients are correct by looking at label and doing unit by unit inspection of product before using.

COMPLIANT

Rubber stoppers of vials/bottles and ampules disinfected with 70% sIPA prior to introducing needle/breaking ampule, waiting 10 seconds for 70% sIPA to dry.

NOT INSPECTED

Contents thoroughly mixed and inspected for particulate matter, incompatibility or other issues.

NOT INSPECTED

Compounding Procedures *(continued)*

Before dispensing CSP, clarity is visually confirmed. Identity and amounts of ingredients, procedures to prepare, sterilize, and specific release criteria are reviewed to assure accuracy and completeness.

COMPLIANT

Comments
per compounding record

Opened single dose ampules must be discarded immediately.

NOT APPLICABLE

Single dose containers opened in worse than ISO Class 5 used within 1 hour then discarded, with time first used/discard time documented on container.

NOT APPLICABLE

Single dose containers opened in ISO Class 5 used within 6 hours then discarded, with time first used/discard time documented on container.

NOT INSPECTED

MDV used for 28 days, or as specified by manufacturer, once punctured, with date first used/discard date documented on MDV.

NOT INSPECTED

Compound record is required.

COMPLIANT

Appropriate procedures and packaging followed for each step.

COMPLIANT

Comments
per compounding record

Compounding Procedures *(continued)*

Pharmacist verification of steps performed by technicians by visual inspection.

NOT INSPECTED

Comments

Part of final verification. Discussed procedure for in-process checks by pharmacist.

Documentation of compounding accuracy by 2nd person in addition to compounder if more than one person is compounding, to ensure proper measurement, reconstitution, component usage.

NOT INSPECTED

Name and quantity of each component on batch labels.

COMPLIANT

Date and time preparation compounded (may be internal reference number) on batch labels.

COMPLIANT

Verifying pharmacist identifier on batch labels.

COMPLIANT

BUD on batch labels. Cannot use exp/expiration. May use: Use Before/Discard After/Administer By, etc.

COMPLIANT

Auxiliary labels, ie packaging and labeling of hazardous CSP, on batch lables.

COMPLIANT

Compounding Procedures *(continued)*

Standard label requirements on patient specific labels to include date of dispensing, and pharmacy name, address if CSP will leave the premises.

COMPLIANT

Verifying pharmacist identifier on patient specific labels.

COMPLIANT

BUD on patient specific labels. Cannot use exp/expiration. May use: Use Before/Discard After/Administer By, etc.

COMPLIANT

Flow rate, if applicable, on patient specific labels.

NOT APPLICABLE

Auxiliary labels, ie packaging & labeling of hazardous CSP, on patient specific labels.

COMPLIANT

Directions for use, including infusion rate, on patient specific labels.

COMPLIANT

Required controlled substances transfer warnings, where applicable, on patient specific labels.

NOT INSPECTED

Compounding Procedures *(continued)*

Identity of dispensing pharmacist on patient specific labels.

COMPLIANT

Storage requirements, when applicable, on patient specific labels.

COMPLIANT

If redispense CSPs, must ensure sterility, purity and stability of CSP and BUD cannot be changed unless retested.

NOT APPLICABLE

Check for container and closure integrity, done after compounding and if stored, before dispensing.

COMPLIANT

Comments

Verbolized process. Specify visuol verificotion procedure for CSPs dispensed from anticipatory stock in SOP (see 201 KAR 2:076 Sec 5 (4)).

Compounding accuracy documented by verification of steps.

COMPLIANT

Comments

per compounding record. See previous comment r/t in-process checks by pharmacist.

Verification of identity and quantity verified by reconciliation of components.

COMPLIANT

Labels verified as being correct.

COMPLIANT

Continuous Quality Improvement

Share data with staff.

COMPLIANT

Track and trend data.

COMPLIANT

Track complaints from patients and practitioners.

COMPLIANT

Formalized in writing.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Consideration of all aspects of preparation and dispensing including environmental testing and verification of results.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Description of specific monitoring and evaluation activities.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Specification of how results are to be reported and evaluated.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Continuous Quality Improvement *(continued)*

Identification of appropriate follow-up mechanisms when action limits or thresholds are exceeded.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Delineation of the individuals responsible for each aspect of the program.

NOT INSPECTED

Comments

In process of implementing updated SOP(s) to align with revised USP 797 requirements.

Sterile Compounding of Hazardous Drugs

Personnel who handle, dispose or compound HD are trained and competency is assessed prior to handling HD and annually thereafter. Training shall be a didactic overview and verified by testing specific HD preparation techniques.

NOT INSPECTED

Personnel who compound HD shall be trained in storage, handling and disposal.

NOT INSPECTED

Personnel who compound HD shall be trained in safe aseptic manipulation practices.

NOT INSPECTED

Personnel who compound HD shall be trained in negative pressure techniques when utilizing BSC or CACI.

NOT INSPECTED

Personnel who compound HD shall be trained in correct use of Closed-System Transfer Devices (CSTD), if applicable.

NOT APPLICABLE

Sterile Compounding of Hazardous Drugs *(continued)*

Personnel who compound HD shall be trained in containment, cleanup and disposal for breakages and spills.

NOT INSPECTED

Personnel who compound HD shall be trained in treatment of personnel contact and inhalation exposure.

NOT INSPECTED

Written confirmation by all compounding personnel of reproductive capability that they understand the risks of handling HD.

COMPLIANT

HD are handled with caution at all times using chemo rated gloves during receiving, distributing, stocking, inventorying, preparing for administration, and disposal.

NOT INSPECTED

Personal compounding equipment (PPE) includes gowns with low permeability like polyethylene.

COMPLIANT

Personal compounding equipment (PPE) includes face masks.

COMPLIANT

Personal compounding equipment (PPE) includes eye protection, as appropriate.

COMPLIANT

Sterile Compounding of Hazardous Drugs *(continued)*

Personal compounding equipment (PPE) includes hair covers.

COMPLIANT

Personal compounding equipment (PPE) includes shoe covers or dedicated shoes.

COMPLIANT

Personal compounding equipment (PPE) includes double gloving with chemo rated gloves, with outer glove being sterile.

COMPLIANT

HD CSP are compounded in a BSC or CACI.

COMPLIANT

BSC or CACI is located inside an ISO Class 7 area that is physically separate from other areas and is negative pressure of 0.01 inch water column to adjacent positive pressure ISO Class 7 ante room.

COMPLIANT

Documentation from CACI manufacturer that the ISO Class 5 environment is maintained under dynamic conditions when not located in an ISO Class 7 environment but must be in a negative pressure room with at least 12 ACPH.

NOT APPLICABLE

For low volume exemption, defined by KBOP as 5 HD CSPs/2 week period, may use 2 levels of containment.

NOT APPLICABLE

Sterile Compounding of Hazardous Drugs *(continued)*

Documentation from manufacturer of recovery time to achieve ISO Class 5 air quality of CACI when turning off/on and when transferring material from ante chamber to main chamber before and during compounding.

NOT APPLICABLE

CACI located in low traffic area.

NOT APPLICABLE

For CACI, pressures recorded each shift, minimum of daily. Main chamber is at least negative 0.01 inch water column to ante chamber and ante chamber is at least positive 0.02 inch water column to general pharmacy.

NOT APPLICABLE

PEC cleaned daily/each shift in correct order of top, back, sides, racks/poles, front inside of BSC shield or CACI, gauntlets in CACI, items on deck, deck, CACI ante chamber in the same order,

COMPLIANT

Comments

Based on SOP and verbal description of process by technician.

HD shall be stored separately from other inventory.

COMPLIANT

HD disposed of in a manner that complies with all Federal and State laws.

NOT INSPECTED

12 Hour BUD

Compounded in an ISO Class 5 LAFW not located in ISO Class 7 room.

NOT APPLICABLE

Low risk, non-hazardous, patient specific CSP.

NOT APPLICABLE

BUD 12 hours or less, administration begins no later than 12 hours from beginning of compounding.

NOT APPLICABLE

Personnel gowns and garbs the same as for a clean room.

NOT APPLICABLE

Cleaning of ISO Class 5 LAWF is the same as for an ISO Class 5 LAWF in clean room.

NOT APPLICABLE

ISO Class 5 LAWF is segregated compounding area, not near garbage can, sink, window, door.

NOT APPLICABLE

Immediate use

Compounding does not take place in ISO Class 5 PEC.

NOT APPLICABLE

Immediate use *(continued)*

Low risk, non-hazardous CSP.

NOT APPLICABLE

Compounding procedure is continuous not exceeding 1 hour & administration begins no later than 1 hour from start of compounding, if not CSP is discarded.

NOT APPLICABLE

During compounding, aseptic technique is followed and if not immediately administered the CSP is under continuous supervision to minimize contact with non-sterile items.

NOT APPLICABLE

CSP is immediately and completely administered by compounder or witnessed by compounder, if not must be labeled with patient identifier, names and amounts of all components, name or initials of compounder, and exact 1-hour BUD and time.

NOT APPLICABLE

CAI not Located in ISO Class 7

Documentation from CAI manufacturer the ISO Class 5 environment is maintained under dynamic conditions when not located in an ISO Class 7 environment.

NOT APPLICABLE

Documentation from CAI manufacturer of recovery time to achieve ISO Class 5 air quality when turn off and on and when transferring material from ante chamber to main chamber before and during compounding.

NOT APPLICABLE

CAI not Located in ISO Class 7 *(continued)*

CAI located in low traffic area.

NOT APPLICABLE

Documentation from CAI manufacturer compounder is exempt from garbing.

NOT APPLICABLE

CAI Pressures documented each shift, minimum of daily. Main chamber at least positive 0.02 inch water column to ante chamber and ante chamber at least positive 0.02 inch water column to general pharmacy.

NOT APPLICABLE

Daily/shift documented cleaning of CAI, in the following order: top, back, sides, racks/poles, inside front, gauntlets, items on deck, deck, and ante chamber in same order.

NOT APPLICABLE

Personnel appropriately garbed while cleaning CAI.

NOT APPLICABLE

All items cleaned and disinfected before placing in ante chamber of CAI.

NOT APPLICABLE

Temperature is recorded daily.

NOT APPLICABLE

CAI not Located in ISO Class 7 *(continued)*

Controlled storage areas for room temperature is 68 to 77 F or 20 to 25 C.

NOT APPLICABLE

Controlled storage area for cold temperature is 36 to 46 F or 2 to 8 C.

NOT APPLICABLE

Controlled storage area for freezer temperature is -13 to 14 F or -25 to -10 C.

NOT APPLICABLE

High Risk

Active Pharmaceutical Ingredient (API): Certificate of Analysis on file.

COMPLIANT

Active Pharmaceutical Ingredient (API): Use USP or NF product and if not, safety and purity established.

COMPLIANT

Comments

per SOP

Active Pharmaceutical Ingredient (API): Label bears batch or lot number.

COMPLIANT

Active Pharmaceutical Ingredient (API): Label bears expiration date, if not, an expiration date of no more than 1 year from date of receiving is assigned.

COMPLIANT

High Risk *(continued)*

Pharmacy marks API with date received.

COMPLIANT

If pharmacy puts API in smaller container for ease of use, container bears name of API.

NOT INSPECTED

If pharmacy puts API in smaller container for ease of use, container bears date API was received.

NOT INSPECTED

If pharmacy puts API in smaller container for ease of use, container bears date API was transferred.

NOT INSPECTED

If pharmacy puts API in smaller container for ease of use, container bears batch or lot number of API.

NOT INSPECTED

If pharmacy puts API in smaller container for ease of use, container bears expiration date from manufacturer or pharmacy assigned expiration date of no more than 1 year from date of receiving.

NOT INSPECTED

APIs stored in tightly closed containers under temperature, humidity and lighting conditions per official monograph or suppliers.

COMPLIANT

Comments

See comment in previous section r/t storoge of components in negative pressure buffer room.

High Risk *(continued)*

Pre-sterilization procedures for high risk CSP, weighing and mixing, shall be completed in no worse than ISO Class 8 environment.

COMPLIANT

Appropriate sterilization methods used and documented.

COMPLIANT

Terminal sterilization of non-sterile empty vials or stoppers/closures used and documented.

COMPLIANT

Pre-filter with 1.2 micron to remove large particles, if needed.

NOT INSPECTED

Filtration performed in ISO Class 5 environment.

COMPLIANT

Documentation 0.2/ 0.22 micron sterile, non-pyrogenic microporous membrane filter is chemically/physically compatible with CSP.

COMPLIANT

Filtration is completed rapidly without filter replacement.

NOT INSPECTED

Comments

Did not observe filtration process.

Filter integrity testing is performed and documented for each filter used with each batch sterilized by filtration.

COMPLIANT

Written documentation of description of steam sterilization includes conditions and duration for specific CSP.

NOT APPLICABLE

Comments

No CSPs are steam sterilized.

Prior to sterilizing, plastic, glass and metal devices are tightly wrapped in low particle shedding paper or fabric or sealed in envelopes that prevent post-sterilization microbial penetration.

COMPLIANT

Autoclave allowed to reach 121 C before starting sterilization process.

COMPLIANT

Usual expose to 121 C at 15 psi for 20 – 60 minutes. Maintains log of temperature and exposure time for each steam sterilized CSP.

COMPLIANT

Ensures steam contacts all ingredients and surfaces to be sterilized.

NOT INSPECTED

Comments

Did not observe loading of autoclave.

Autoclave was mapped.

NOT INSPECTED

High Risk *(continued)*

Effectiveness of steam sterilization is verified each time using biological indicators (BI) and temperature-sensing devices.

COMPLIANT

For dry heat sterilization, heat filtered air is evenly distributed throughout the chamber with a blower.

COMPLIANT

Dry heat oven is equipped with system for controlling temperature and exposure period and has been mapped.

COMPLIANT

Comments

Did not review mapping documentation.

Sufficient space is left between materials to allow circulation of hot air.

NOT INSPECTED

Comment

Did not observe loading of oven.

Written documentation of description of dry heat includes conditions and duration for specific CSP.

COMPLIANT

Effectiveness of dry heat sterilization is verified each time using biological indicators (BI) and temperature-sensing devices.

COMPLIANT

For depyrogenation by heat used to render glassware, containers, vials free from pyrogens and viable microbes. Cover tightly with aluminum foil, bake at 250 C for 30 minutes, use immediately or if stored must be ISO Class 7 environment.

COMPLIANT

High Risk *(continued)*

For depyrogenation by heat written documentation of description of cycle and duration for specific load items.

COMPLIANT

For depyrogenation by heat effectiveness of cycle is verified using Endotoxin Challenge Vials (ECVs) with bacterial endotoxin testing performed on ECVs to verify the cycle is capable of achieving a 3 log reduction in endotoxins.

NOT INSPECTED

If depyrogenated glassware, containers, and/or vials are not used immediately, must be kept tightly covered with aluminum foil and stored in an ISO 7 environment.

NOT APPLICABLE

Other methods of sterilization are used with documented procedures and validation performed.

NOT APPLICABLE

Extending BUD and Sterility Testing

Sterility testing for both bacteria and fungus performed each time BUD is extended beyond USP guidelines.

COMPLIANT

Sterility testing performed on high risk CSP prepared in groups of more than 25 identical containers.

COMPLIANT

Extending BUD and Sterility Testing *(continued)*

Sterility testing performed on high risk CSP exposed longer than 12 hours at 2-8C (36-46F) or longer than 6 hours at warmer than 8C (46F) before sterilization.

NOT INSPECTED

Sterility testing is done using membrane filtration (preferred method) or direct inoculation per USP <71>.

COMPLIANT

Appropriate number of CSPs tested for sterility per UPS <71> for parenterals: less than 100 units, test 10% or 4 units, whichever is greater; for 100-500 units, test 10 units; and for greater than 500 units, test 2% or 20 units, whichever is less.

COMPLIANT

Appropriate number of CSPs tested for sterility per UPS <71> for large volume parenterals: 2% or 10 containers, whichever is less.

NOT INSPECTED

Appropriate number of CSPs tested for sterility per UPS <71> for non-parenterals (eye drops, inhalations): less than 200 units, test 5% or 2 units, whichever is greater; for 200 or more units, test 10 units; and if packaged as unit dose, use parenteral testing numbers.

NOT INSPECTED

Bacterial endotoxin testing performed on high risk CSP if prepared in groups of more than 25 identical containers.

COMPLIANT

Extending BUD and Sterility Testing *(continued)*

Bacterial endotoxin testing performed on high risk CSP if exposed longer than 12 hours at 2-8C (36-46F) or longer than 6 hours at warmer than 8C (46F) before sterilization.

NOT INSPECTED

CSP quarantined until results of sterility and endotoxin tests received or if dispensed before receiving results, written procedure requiring daily observation of incubating CSPs and immediate recall when evidence of growth. Patient and prescriber notified of potentially contaminated CSP and potential risk.

COMPLIANT

Comments

Discussed requirement for daily observation of samples by contract lab during incubation.

Positive sterility test results promptly investigated including aseptic technique, environmental control, etc. to identify source of contamination and correct the issue.

COMPLIANT

Stability data documented to support extended BUD, either from literature or testing.

NOT INSPECTED

Method suitability test performed on CSP for stability data derived from testing.

NOT INSPECTED

If potency testing is performed, strength must be within 10% of stated potency.

COMPLIANT

Transporting CSP Outside Facility

P&P for packing containers specifying which to use.

COMPLIANT

Transporting CSP Outside Facility *(continued)*

P&P for insulating and stuffing materials specifying which to use.

COMPLIANT

Written instructions to patients how to safely open containers of CSP.

COMPLIANT

Ascertain temperature of CSP during transit.

NOT INSPECTED

Specific handling and exposure instructions on the exteriors of containers packed with CSPs.

COMPLIANT

Periodic review of delivery performance of couriers to ascertain CSPs are being efficiently and properly transported.

COMPLIANT

Provide CSP labeling that includes clearly readable BUDs, storage instructions, and disposal information for out of date units.

COMPLIANT

Ascertain each patient is able to store CSP properly, including use of properly functioning refrigerator or freezer if needed.

NOT INSPECTED

Board Approved Waivers

Board has approved a waiver for non-hazardous sterile compounding.

NOT APPLICABLE

Board has approved a waiver for hazardous sterile compounding.

NOT APPLICABLE

Inspector's Signature

I have completed this inspection in accordance with the statutes and administrative codes.

Jessica Williams

Inspector: Jessica Williams

Pharmacist's Signature

I have read and understand the statutes and administrative codes. I acknowledge that the items noted in this report have been discussed with me. I understand that if I disagree with any of the deficiencies cited, that I have the right to refute them on this report or and other form that I choose to send to the department.

RE: P08150 - TMC Acquisition LLC 5/30/2024 Onsite Inspection Corrective Actions

Inspector Williams,

Please see the requested information and outlined proposed corrective action in response to the 5/30/2024 onsite General Pharmacy Inspection Report noncompliant observations for Permit No.: P08150, TMC Acquisition LLC dba Tailor Made Compounding.

General:

- Records/Computer Records (201 KAR 2:170)
    - Comments: Not currently signing log to document daily dispensing data reviewed and verified by each pharmacist of record.

The Pharmacy now has a report automatically generated daily and emailed to the pharmacists each morning showing the number of records verified by each pharmacist from the previous business day. This report is printed and signed by each pharmacist who verified prescriptions the previous business day and then stored in a binder within the Dispensary.

- Prescription Labeling Requirements (KRS 217.065)
    - See comment on compounding inspection report (observed 2 unlabeled prescription vials – each containing capsules- left in tote on pharmacy counter)

Controlled Substances:

- Written CIII-V Prescription Requirements (KRS 218A.180 and 902 KAR 55:105)
    - Comments: Electronic prescriptions not properly received. Must get verbal authorization to dispense CIII-CIV drug and maintain record of verbal prescription accordingly.

[KY BOP Outreach reference] *To address the identified deficiencies specific to the Pharmacy's validation of controlled substance prescriptions for Kentucky residents, I wanted to communicate the implementation of the Pharmacy's corrective actions.*

Effective 6/1/2024, the Pharmacy initiated a process to identify all controlled substance prescriptions for Kentucky patients submitted through the portal for pharmacist validation. All qualifying prescriptions submitted after 6/1/2024 require pharmacist validation of prescription information through the documentation of the following information on the physical prescription:

- *Authorizing clinic contact name*
- *Date of validation/call*
- *Validating Pharmacist signature*

Once validated, the documented prescription will be uploaded into the Pharmacy Processing Software and will require pharmacist credentials to indicate validation completion prior to further processing for fulfillment and dispensing. As previously implemented, all physical records will be filed in accordance with Kentucky Board of Pharmacy requirements.

The Pharmacy identified all clinics submitting qualifying prescriptions over the past 120 days to provide initial notice of the process implementation as well as an opportunity for the clinic to provide updated point of contact information. All prescriptions the pharmacy is unable to validate will be canceled 1 week after the third attempt of contact and documented as such.

The Pharmacy looks forward to continuing to work in cooperation with the Board's requests and/or additional questions. We hope that our efforts and the provided information demonstrate the pharmacy's commitment to quality assurance, compliance, and patient wellness.

Thank you,

Blake McLeod
