Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.

- Recommend also pulling supervising personnel file.

- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).

Review five (5) personnel files and document your observations. (For applicants seeking a Class E-S Non-Resident Sterile Compounding Inspection (Texas Sampling), review a total of 10 personnel records.)

- *Note: long-term employees may not have initial training available, if this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.

Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions	Demonstrating Knowledge and Competency of Core Skills (Section 2.1)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information.	USP requirements: 1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2). 2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas: -Hand hygiene -Garbing -Cleaning and disinfection -Calculations, measuring, and mixing -Aseptic technique -Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components) -Use of equipment -Documentation of the compounding process (eg, master formulation and compounding records) -Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area -Proper use of PECs -Principles of movement of materials and personnel within the compounding area 3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3). 4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3). 5. All training and evaluations must be documented.

2010 COLORADO NONCOMPLIANCE

In a Final Order entered May 17, 2010, the Colorado Board of Pharmacy disciplined Hartley for noncompliance with the Board's prescription drug monitoring program rules. For the periods of October 16, 2009, through October 25, 2009 and March 16, 2010, through, March 25, 2010, Hartley did not submit a zero report indicating no dispensing of prescriptions for the respective periods. A fine of $5,500 was paid to the State of Colorado and no further action was taken. (Colorado Board of Pharmacy - Case No. 2010-003639; License #: OSP 5641)

2010 CALIFORNIA CITATION

In a Citation issued October 4, 2010, the California State Board of Pharmacy cited Hartley for using an expired ingredient to compound a medication. Under California law, this citation is not considered a disciplinary action for reporting purposes. (California Board of Pharmacy – Citation No. CI 2009 41822; License #: PHY 20643)

The below action was a reciprocal action taken by a state regulator as a result of Hartley's alleged failure to report the 2010 California Citation matter described above:

- *Colorado Board of Pharmacy – DORA Case No. 2016-296 (Final Order Entered June 30, 2016; License # OSP 5641)* – Hartley paid a fine of $2,300 to settle allegations by the Colorado Board of Pharmacy that Hartley failed to timely report the 2010 California Citation.

The below actions were reciprocal actions taken by state regulators as a result of Hartley's alleged failure to report the 2010 Colorado Noncompliance and the 2010 California Citation matters described above:

- *Hawaii – Regulated Industries Complaints Office Case No. PHA 2015-34-L (Settlement Agreement approved January 21, 2016; License #: PMP 607)* - Hartley paid a fine of $1,500 to settle allegations by the Hawaii Regulated Industries Complaints Office that Hartley failed to timely report the 2010 Colorado Noncompliance and 2010 California Citation.
- *Michigan Board of Pharmacy – Case No. 53-16-140779 (Consent Order Dated December 7, 2016; License #: 53-01-009562)* – The Michigan Board of Pharmacy found Hartley in violation of state law which provides for reciprocal disciplinary action based on the 2010 Colorado Noncompliance and 2010 California Citation. As part of a consent order, Hartley paid a fine of $500.00.

2015 FDA FORM 483 LETTER

In 2015, FDA inspected Hartley and found it in violation of certain provisions of Section 503A and issued a Form 483 Letter – Notice of Inspectional Deficiencies to Hartley – which noted inspectional deficiencies based on Hartley's clinical compounding processes.

2016 FDA WARNING LETTER

After a voluntary recall due to Hartley's observation that certain drugs were compounded using a laminar flow hood that was malfunctioning, the FDA issued Hartley a Warning Letter on April 21, 2016. Among the allegations in the Warning Letter were several quality control issues associated with Hartley's compounding processes and an allegation Hartley was dispensing prescription drugs without receiving individually-identified prescriptions. On September 26, 2017, the FDA issued a Close Out letter to Hartley, noting that Hartley had adequately addressed the concerns in the Warning Letter. (FDA WL #29-16).

The below action followed the FDA Warning Letter:

- *Alabama Board of Pharmacy - Case No. 16-L-0121 (Agreement Entered August 31, 2017; License # 113250)* – Hartley reached a settlement agreement with the Alabama Board of Pharmacy ("Board") to resolve disciplinary action related to the allegations contained in the FDA Warning Letter. As part of the agreement, Hartley's Alabama license was placed on probation and Hartley agreed to not renew following expiration of the license.

  The below actions were reciprocal actions taken by state regulators as a result of Hartley's alleged failure to report the Alabama matter described above:

  - *Colorado Board of Pharmacy - Case No. 2017-1186 (Letter of Admonition Dated March 16, 2018; License #OSP 5641)* – Hartley reached a settlement agreement with the Colorado Board of Pharmacy ("Board") to resolve allegations that Harley failed to timely notify the Board of the disciplinary action taken by the Alabama Board of Pharmacy. As part of the agreement, Hartley received a letter of admonition from the Board.
  - *Texas Board of Pharmacy - Case No. L-17-027 (Agreed Order Entered August 7, 2018; License #: 26729)* – Hartley and the Texas Board of Pharmacy negotiated an Agreed Board Order to resolve disciplinary action initiated in response to the action taken by the Alabama Board of Pharmacy. As part of the order, Hartley paid a $5,000 fine and Hartley's license was publicly reprimanded.

Detailed Response to the Form 483 Letter Dated March 24, 2017

NOTE: FDA Form 483 text is represented in ***Bold, Italic*** text.

OBSERVATION 1

Equipment, materials, and/or supplies are not disinfected prior to entering the aseptic processing areas.

Specifically,

The repeater pump used to dispense drug stocks into smaller unit vials is wheeled from the ISO-7 Ante room to the ISO-6 IV Clean Room when needed and wheeled back to the Ante room when not needed.

Response 1:
Hartley Medical Center Pharmacy Inc. agrees with the FDA's observation. The repeater pump is affixed to a stand with wheels that is occasionally moved from the ISO-6 and ISO-7 cleanroom areas. The repeater pump and stand will strictly stay in the ISO-6 buffer room and will not be removed unless repairs are needed or its use is discontinued. If the repeater pump is removed from the ISO-6 area, it will be cleaned appropriately with sterile 70% isopropyl alcohol upon its return. Regardless, the repeater pump and stand will be cleaned on a weekly basis and before each use. These changes will be reflected in an updated SOP #1.05 (Attachment 1) as well as the cleaning log (Attachment 3). Staff have been trained and notified on the revision of SOP #1.05. (Attachment 2).

OBSERVATION 2

The ISO-classified areas have difficult to clean, particle-generating, or visibly dirty equipment or surfaces.

Specifically,

I observed that gaps in the emergency exit double doors from the ISO-6 IV room are sealed with tape, but there were some areas where the tape had been worn or was not fully maintaining the seal, thus possibly compromising the integrity of the ISO-6 room.

Response 2:
Hartley Medical Center Pharmacy Inc. agrees with the FDA's observation. The tape that is mentioned in Observation 2 is located on the exterior of the cleanroom, which is not an ISO-classified area. The tape is used to prevent any particles, vermin, and / or debris from entering the ISO-6 area. The tape will be changed on a routine basis from now on. The frequency of this will be monthly unless a significant amount of wear and tear is visibly seen on the tape. This policy will be reflected in an updated SOP #1.00 (Attachment 3). Staff have been trained and notified on the revision of SOP #1.00. (Attachment 2).

	)	
Non-Resident Pharmacy Permit Number 113250	)	Case Number 16-L-0121

FINAL ORDER

On December 13, 2016 this cause came before the Alabama State Board of Pharmacy (hereinafter also referred to as the "Board"), on a Complaint against Hartley Medical Center Pharmacy, Inc. (hereinafter also referred to as the "Respondent"). Evidence having been adduced thereon, the Board has determined that the following Findings of Fact and Conclusions of Law are supported by the preponderant weight of evidence and law.

Findings of Fact

1. The Respondent is a non-resident pharmacy which was issued permit number 113250. (Board's Exhibit Two)

2. The Respondent was notified of the charges on October 24, 2016; the Respondent was represented at the administrative hearing by counsel, Ms. Rhonda H. Lacey, Esq. The Respondent's president and chief executive officer, Mr. William Stuart also attended the administrative hearing. . (Board's Exhibits One and Two)

3. The Respondent made no objection to the timeliness of the Notice of Hearing or the specificity of the Statement of Charges.

4. From June 29, 2015 through July 8, 2015 the Food and Drug Administration (FDA)) inspected the Respondent's facilities; the FDA subsequently issued a FDA Form 483 listing six observations showing deficiencies in the Respondent's processing and handling of sterile compounded products. (Board's Exhibit Three).

5. On April 21, 2016 the Food and Drug Administration of the Public Health Service (FDA) issued to the Respondent a Warning letter based on the June 29, 2015 through July 8, 2015 inspection. (Board's Exhibit One "A")

6. The April 21, Warning letter, among other things, stated the following:

(a) valid prescriptions for individually-identified patients for a portion of the drug products you were producing were not received.

(b) serious deficiencies in your practices for producing sterile drug products, which put patients at risk were observed, including the Respondent produced sterile from non-sterile components and then stored them in containers, which were subsequently punctured multiple times throughout the assigned expiry period, puncturing a container compromises the integrity of the container closure system, and each puncture increases the chances of contamination.

(c) the Respondent's production process observed at its facility, including the storage conditions, represents a potential lack of control for bioburden and further sterilization performed by the Respondent would not remove bacterial endotoxin of particular concern as some of the drug products the Respondent produced from solutions were intended for intrathecal administration and the Respondent do not test each of its finished drug products to ensure that the amount of endotoxin is within an acceptable limit.

(d) The Respondent did not use a sporicidal agent or sterile wipes, and used non-sterile sanitizers as part of its disinfection program for the aseptic processing areas posing a significant contamination risk.

(Board's Exhibit One "A")

7. On November 17, 2016 the FDA issued a recall alert for the recalling of several lots of Respondent's product Prolotherapy with Phenol based on non-sterility concerns for the products. (Board's Exhibit Four)

8. In addition to the Prolotherapy with Phenol recall, the Respondent recalled multiple other products including hydromorphone, hydromorphone with bupivacaine, sufentanil with clonidine, fentanyl with baclofen and bupivacaine and clonidine, hydromorphone with fentanyl, among others. (Board's Exhibit Five)

9. The Respondent was inspected On November 16-17, 2016 by the National Association of Boards of Pharmacy for sterile compounding where the Respondent was found deficient in its use of beyond use dates and non-compliant with standards related to stock solutions, cleaning of sterile preparation hoods, high risk compounding tests and testing of performance of sterile preparation hoods. (Board's Exhibit Six)

10. From its website, the Respondent's New Customer Agreement shows that it sells to entities other than on patient specific requests. (Board's Exhibit Seven)

11. The Respondent's testing of sterile products is inadequate including testing of and use of multiple dose products. (Board's Exhibits One "A, Six, Eight, Nine, Eleven, Twelve, Thirteen and Fifteen)

12. Training of personnel and/or document of such training for sterile compounding by the Respondent is inadequate. (Board's Exhibits One "A", Three, Ten and Seventeen)

13. The Respondent's use of beyond use dating for sterile products does not meet appropriate and accepted standards. (Board's Exhibits Six, Fourteen and Sixteen)

14. The cleaning of the Respondent's aseptic preparation areas and equipment fails to meet appropriate and accepted standards. (Board's Exhibits Three, Six, Seventeen and Eighteen)

Conclusions of Law

1. The Alabama State Board of Pharmacy has jurisdiction in this cause pursuant to Code of Alabama (1975), § 34-23-34, § 34-23-92 (12), § 20-2-213 (e) and § 41-22-12.

2. The Respondent was properly notified of the charges.

3. The Respondent made no objection to the timeliness of the Notice of Hearing.

4. The Respondent made no objection to the specificity of the Statement of Charges

5. The Respondent's non-resident pharmacy permit is due to be REVOKED in that it is guilty of violating Code of Alabama (1975), § 34-23-33 (2) in that it violated 503A, 505 (a), 502 (f) (1), 301 (a), (d) and/or (k) of the FDCA as more fully set out in a Warning Letter from the FDA dated April 21, 2016.

Re: Case No. 2017-1186
Registration No. OSP 5641

Dear Pharmacy:

On March 17, 2016, the State Board of Pharmacy ("Board") reviewed the above-referenced case.

After careful consideration of the allegations and corresponding evidence before the Board, the Board determined that, on December 22, 2016, the Alabama Board of Pharmacy ("Alabama Board") entered a Final Order initially revoking your registration in the State of Alabama. The Alabama Board's action arose from a warning letter issued on April 21, 2016, by the Food and Drug Administration ("FDA") following a June 29-July 8, 2015, inspection. The Alabama Board's findings supporting its decision included: (a) valid prescriptions for individually-identified patients for some drug products produced were not received; (b) serious deficiencies in the practices for producing sterile drug products were observed; (c) the production process observed, including the storage conditions, represented a potential lack of control for bioburden; and (d) sterile wipes were not used and non-sterile sanitizers were used as part of the disinfection program for the aseptic processing areas.

You did not timely notify the Board of the Alabama Board's actions.

In mitigation, you note that, on January 10, 2017, the FDA sent a letter concluding "it appears" the deficiencies noted in the warning letter had been addressed. On September 13, 2017, the Alabama Board amended its discipline to remove the sanction of revocation and impose a suspension with probation. On September 26, 2017, the FDA sent a close-out letter, after a March 20-24, 2017, inspection, having found that the deficiencies cited in the warning letter had been "adequately addressed".

After thorough review, the Board found probable cause to believe that you violated sections 12-42.5-123(1)(c)(I-II), (g), and (q), C.R.S., and Rule 9.00.10(b), and are therefore subject to discipline pursuant to section 12-42.5-124, C.R.S.. The Board issues this letter of admonition in accordance with section 12-42.5-124(6)(a), C.R.S.

By this letter, the Board takes the formal disciplinary action of admonishing you for the conduct specified above, and warns you that repetition of such practice may lead to imposition of more severe disciplinary action. This letter of admonition shall be made a part of the permanent records of the Board. This letter is an open public record and a reportable action to individuals or entities requesting disciplinary information. The Board strongly encourages you to review and

understand the Pharmacists, Pharmacy Businesses, and Pharmaceuticals Practice Act requirements and obligations for the practice of prescription drug outlets in Colorado.

You are advised that this letter is in lieu of a formal hearing. Pursuant to your agreement with the Board, you have accepted this letter of admonition and agreed to waive the right provided by section 12-42.5-124(6)(b)-(c), C.R.S., to request that the Board initiate formal disciplinary proceedings to adjudicate the propriety of the conduct upon which the letter of admonition is based.

Sincerely,

FOR THE STATE BOARD OF PHARMACY

Re: Colorado Board of Pharmacy; Case No. 2016-296

Dear Mr. Stuart:

The Colorado State Board of Pharmacy reviewed the available material concerning the complaint filed against the above-mentioned pharmacy. Upon thorough review and discussion, the Board found reasonable cause that the pharmacy violated Sections 12-42.5-123(1)(c), (g) and (q), C.R.S. and Board Rules 9.00.10(b), 21.00.10(b) and 21.10.60(a). In order to promptly resolve the complaint, the Board has referred this disciplinary action to the Expedited Settlement Process ("ESP") along with settlement terms.

The Board would prefer to settle this disciplinary complaint rather than initiating formal legal proceedings. In lieu of a hearing, the Board is willing to resolve this case by means of a stipulated agreement pursuant to the following terms:

- Stipulation with a fine in the amount of $2,000 plus the statutorily mandated surcharge of 15%, for a total fine amount of $2,300.

The above settlement terms and consequences are more fully explained in the enclosed Stipulation and Final Agency Order (Order). By signing the Order, you agree to the Board's settlement terms and avoid formal disciplinary proceedings.

If you wish to accept the terms of this Order, please do the following:

- READ the entire Stipulation and Final Agency Order;
- SIGN the enclosed Stipulation and Final Agency Order;
- RETURN the signed Stipulation and Final Agency Order by June 20, 2016, to:

This correspondence has been sent to the Respondent and Attorney of Record. If you are represented by counsel, you may want to contact them to discuss this matter. This correspondence is not intended to interfere with any attorney client relationship.

Denver, CO 80202

In reviewing the Order, please be aware that the burden of proof in a disciplinary proceeding is not "beyond a reasonable doubt." Rather, disciplinary proceedings are similar to civil trials where the burden is "by a preponderance of the evidence." This means that the Board must only present sufficient evidence to prove that "more likely than not" the pharmacy violated the practice act.

Please be advised that during this process, you have the right to either represent yourself or to be represented by legal counsel of your choice at your own expense. Also, be aware that the representations in the attached Stipulation do not limit the Board's case if this case should be filed for formal disciplinary proceedings. The Colorado Attorney General may add additional violations that he or she deems appropriate.

Finally, this letter and the Expedited Settlement Process fall under the protection of CRE 408 which excludes evidence of compromise and offers of compromise to prove liability.

Please do not hesitate to contact me at (303) 894-7723 or by email if you have any questions or concerns about this matter.

Sincerely,

3. Respondent Pharmacy's address of record with the Board and current location is 113 West Victoria Street, Long Beach, California 90805-2162.

8. Complete Agreement. This Settlement Agreement is a complete settlement of the rights, responsibilities and liabilities of the parties hereto with respect to the subject matter hereof; contains the entire agreement of the parties; and may only be modified, changed or amended by written instrument duly executed by all parties hereto.

STIPULATION AND FINAL AGENCY ORDER

IN THE MATTER OF THE DISCIPLINARY PROCEEDING REGARDING THE NON-RESIDENT PRESCRIPTION DRUG OUTLET REGISTRATION OF HARTLEY MED. CTR. PHARMACY INC., REGISTRATION NO. OSP 5641,

RESPONDENT PHARMACY.

IT IS HEREBY STIPULATED by and between the Colorado State Board of Pharmacy ("Board") and Hartley Med. Ctr. Pharmacy Inc. ("Respondent Pharmacy"), to resolve all matters pertaining to Board Case Number 2010-003639 as follows:

1. On July 31, 2006, Respondent Pharmacy became registered by the Board as a non-resident prescription drug outlet in the State of Colorado and was issued Registration No. OSP 5641 ("Colorado Registration").

2. The Board has jurisdiction over Respondent Pharmacy, its Colorado Registration, and the subject matter of this Stipulation and Final Agency Order ("Final Agency Order") pursuant to the provisions of title 12, article 22, C.R.S. (2009), otherwise known as the Pharmaceuticals and Pharmacists Act.

3. Respondent Pharmacy's address of record with the Board and current location is 113 W. Victoria St., Long Beach, CA 90805.

4. Respondent Pharmacy admits these findings and hereby waives any further proof in this or any other proceeding before the Board regarding the following facts.

5. On October 30, 2009, Board staff initiated a Complaint against Respondent Pharmacy because it failed to comply with the data submission requirements of Colorado's Electronic Prescription Drug Monitoring Program ("PDMP") for the reporting period(s) of October 16, 2009, through October 25, 2009.

6. Respondent Pharmacy subsequently failed to submit the required data to the PDMP reporting dispensing transactions of controlled substances in the State of Colorado for the reporting period(s) of March 16, 2010, through March 25, 2010, and did not submit a "zero" report indicating no dispensing transactions for said reporting period(s) as required by Board rule.

EXHIBIT "2"

7. Respondent Pharmacy does not contest that the conduct described above constitutes a violation of §§12-22-125(1)(c) and 12-22-708, C.R.S. and that such conduct provides grounds for disciplinary action against Respondent Pharmacy's Colorado Registration pursuant to Board Policy 30-8.

DISPOSITION

$5,000.00 Fine with 10% Surcharge and Terms

8. **Fine with Surcharge.** Respondent Pharmacy accepts the following discipline: Pursuant to §12-22-125.2(5), C.R.S. Respondent Pharmacy shall pay a fine of **Five Thousand Dollars and No Cents ($5,000.00).** Respondent Pharmacy understands and acknowledges that, pursuant to §24-34-108, C.R.S., the Executive Director of the Department of Regulatory Agencies shall impose an additional surcharge of 10% of this fine. Respondent Pharmacy shall therefore pay a total amount of **Five Thousand, Five Hundred Dollars and No Cents ($5,500.00).** The total amount shall be payable to the State of Colorado and shall be remitted in one lump sum to be included when Respondent Pharmacy submits this signed Final Agency Order to the Board.

9. **Compliance with PDMP.** At all times Respondent Pharmacy is registered with the Colorado State Board of Pharmacy, it shall comply with the data submission requirements of the PDMP. Respondent Pharmacy understands and acknowledges that future violations of PDMP reporting requirements, including failure to submit a "zero" report in the event of no dispensing transactions in Colorado during the relevant reporting period, shall lead to additional penalties pursuant to Board Policy 30-8.

10. **Advisements and Waivers.** Respondent Pharmacy enters into this Final Agency Order freely and voluntarily, after having had the opportunity to consult with its own legal counsel and/or choosing not to do so. Respondent Pharmacy acknowledges its understanding that it has the following rights:

    a. To have a formal notice of hearing and charges served upon it;

    b. To respond to said formal notice of charges;

    c. To have a formal disciplinary hearing pursuant to §12-22-125, C.R.S.; and

    d. To appeal this Board order.

Respondent Pharmacy freely waives these rights, and acknowledges that such waiver is made voluntarily in consideration for the Board's limiting the action taken against it to the sanctions imposed herein.

11. **Acknowledgments.** The undersigned authorized agent of Respondent Pharmacy has read this Final Agency Order in its entirety and acknowledges, after having had the opportunity to consult with its own legal counsel and/or choosing not to do so, that Respondent Pharmacy understands the legal consequences and agrees that none of the terms or conditions herein is unconscionable. 12. **Violations.** Time is of the essence to this Final Agency Order. It is the responsibility of Respondent Pharmacy to take all appropriate steps to comply fully with this Final Agency Order. Respondent Pharmacy acknowledges and agrees that any violation of this Final Agency Order may be sanctioned as provided under §12-22-125.2(4), C.R.S., and may be sufficient grounds for additional discipline, including but not limited to revocation of its registration. The pendency of any suspension or disciplinary action arising out of an alleged violation of this Final Agency Order shall not affect the obligation of Respondent Pharmacy to comply with all terms and conditions of this Final Agency Order.

13. **Integration and Severability.** Upon execution by all parties, this Final Agency Order shall represent the entire and final agreement of and between the parties in this case. In the event any provision of this Final Agency Order is deemed invalid or unenforceable by a court of law, it shall be severed and the remaining provisions of this Final Agency Order shall be given full force and effect.

14. **Public Record.** Upon execution by all parties, this Final Agency Order shall be a public record, maintained in the custody of the Board.

15. **Effective Date.** This Final Agency Order shall become effective upon signature of a Board member or representative.

		Observation	Inspector Notes	USP Reference(s)
37.0	Does the pharmacy ensure the assigned BUD does not exceed the shortest BUD of any individual compounded components? ***Inspector note: Per USP, "For CNSPs prepared from one or more compounded components, the BUD should generally not exceed the shortest BUD of any of the individual compounded components. However, there may be acceptable instances when the BUD of the final CNSP exceeds the BUD assigned to compounded components (e.g., pH-altering solutions). If the assigned BUD of the final CNSP exceeds the BUD of the compounded components, the physical, chemical, and microbiological quality of the final CNSP must not be negatively impacted." Another example of these "acceptable instances" (similar to pH-altering components mentioned above) inspectors may see are stock solutions (and other formulas within a formula) such as methocel 1%.*** ***If no, inspector should describe the observations, including the name of the component whose BUD was shorter than the assigned BUD of the final CSP***	Yes		10.4

Glossary & References	USP <795>
Active Pharmaceutical Ingredient (API)	Any substance or mixture of substances intended to be used in the compounding of a preparation, thereby becoming the active ingredient in that preparation and furnishing pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease in humans or animals or affecting the structure and function of the body. Also referred to as a bulk drug substance. A conventionally manufactured drug product is not an API but is typically manufactured from an API(s).
Added Substance	An ingredient that is necessary to compound a preparation but is not intended or expected to cause a pharmacologic response if administered alone in the amount or concentration contained in a single dose of the compounded preparation. The term is used synonymously with inactive ingredient, excipient, and pharmaceutical ingredient.
Administration	The preparation of a nonsterile pharmacologic or other therapeutic agent for ingesting, inserting, applying, or otherwise providing a nonsterile medication in its final form to a single patient. This includes crushing a tablet(s) or opening a capsule(s) to mix with food or liquids to facilitate patient dosing.
Alcohol-based hand rub	An alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands of health care personnel to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients, excipients, and humectants.
Assigned trainer	One or more individuals assigned by the designated person(s) to be responsible and accountable for directly providing the training, observation, and/or evaluation of personnel for the preparation of CNSPs.
Beyond-use date (BUD)	The date, or hour and date, after which a CNSP must not be used, stored, or transported. The date is determined from the date or time the preparation is compounded.
Biological Safety Cabinet (BSC)	A ventilated cabinet that may be used for compounding. These cabinets are divided into three general classes (Class I, Class II, and Class III). Class II BSCs are further divided into types (Type A1, Type A2, Type B1, Type B2, and Type C1).
Bulk drug substance	See the entry for Active Pharmaceutical Ingredient.
Certificate of analysis (COA)	A report from the supplier of a component, container, or closure that accompanies the supplier's material and contains the specifications and results of all analyses and a description of the material.
Cleaning	The process of removing substances (eg, organic and inorganic material) from objects and surfaces, normally accomplished by manually or mechanically using water with detergents or enzymatic products.
Cleaning agent	An agent, usually containing a surfactant, used for the removal of substances (eg, dirt, debris, microbes, and residual drugs or chemicals) from surfaces.
Closed-system processing device	A device designed to reduce the potential exposure to personnel or contamination of the facility or CNSPs. Examples include CVEs, BSCs, or single-use containment glove bags.
Component	Any ingredient used in the compounding of a preparation, including any API, added substance, or conventionally manufactured product.
Compounded nonsterile preparation (CNSP)	A preparation not intended to be sterile that is created by combining, admixing, diluting, pooling, reconstituting other than as provided in the manufacturer's labeling, or otherwise altering a drug product or bulk drug substance.
Compounding	The process of combining, admixing, diluting, pooling, reconstituting other than as provided in the manufacturer's labeling, or otherwise altering a drug product or bulk drug substance to create a nonsterile preparation.

Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.
- Recommend also pulling supervising personnel file.
- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).
Review five (5) personnel files and document your observations. (For applicants seeking a Class E-S Non-Resident Sterile Compounding Inspection (Texas Sampling), review a total of 10 personnel records.)
- *Note: long-term employees may not have initial training available, if this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.
Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions	Demonstrating Knowledge and Competency of Core Skills (Section 2.1)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information.	USP requirements: 1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2). 2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas: -Hand hygiene -Garbing -Cleaning and disinfection -Calculations, measuring, and mixing -Aseptic technique -Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components) -Use of equipment -Documentation of the compounding process (eg, master formulation and compounding records) -Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area -Proper use of PECs -Principles of movement of materials and personnel within the compounding area 3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3). 4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3). 5. All training and evaluations must be documented.

Hand Hygiene and Garbing Competency Evaluation (Section 2.2)

USP requirements:
1. The garbing and hand hygiene competency evaluation consists of a visual observation and gloved fingertip and thumb sampling (GFT) of both hands.
2. The initial competency evaluation consists of three (3) separate and complete hand hygiene observation, followed by a full garbing procedure and a GFT after garbing. The initial three (3) successful completions must be in succession—failure of any of the three (3) initial garbing competency evaluations requires repeat testing until personnel successfully complete three (3) evaluations in a row.

4. The media device is incubated at 30°C-35°C for no less than 48h and then at 20°C-25°C for no less than an additional five days.
5. Failure is indicated by visual observation of improper hand hygiene and garbing procedures and/or GFT results that exceed the defined action levels. Action level after garbing: >0 cfu/total from both hands.
6. Documentation includes, at minimum:

Inspector Instructions	Aseptic Manipulation Competency (Section 2.3)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information. 5. Document in notes if initial aseptic manipulation competencies are present in files (*unless long-term employee).	USP requirements: 1. Media-fill testing procedures simulate the most difficult compounding procedures encountered by personnel. 2. The pharmacy conducts media-fill testing as described in Box 2. 3. The final containers are incubated at 20°C-25°C and 30°C-35°C for a minimum of seven days at each temperature band. 4. Failure is indicated by visible turbidity or other visual manifestations of growth in the media in one or more container closure unit(s) on or before 14 days. 5. Immediately following the media-fill test, GFT is performed on both hands and inside of an ISO Class 5 PEC. Failure is indicated by visual observation of GFT results that exceed defined action levels. Action level after media-fill testing: >3 cfu/total from both hands. 6. Immediately following the GFT, a surface sample of the direct compounding area inside the PEC is performed in accordance with USP standards for surface sample monitoring and action levels. Action level ISO Class 5: >3 cfu/media device. 7. Failure in the media fill, GFT, or surface sampling constitutes an overall failure of the aseptic manipulation competency. 8. Documentation includes, at minimum: -Name of the person evaluated -Evaluation date and time -Media and components used including manufacturer, expiration date, and lot number -Starting temperature for each interval of incubation -Dates of incubation -Results (for GFT, the number of cfu per hand must be recorded and for surface samples, the number of cfu per sample must be recorded. Note: microbial identification of the cfu is not required for media-fill testing) -Results of the evaluation and any corrective actions -Name of the observer and personnel reading and documenting the results

Facilities have documentation of the stability study, its results, and the method validation available for review. [USP 797 Section 14.3.3]	
STERILITY TESTING: All category 3 CSPs and batches undergo sterility testing performed according to USP <71> or a validated alternative and noninferior method. [USP 797 Sections 12.2 & 14.4.4]	
METHOD SUITABILITY TEST: A Method Suitability Test (or equivalent validation for alternative testing methods) is performed to validate suitability of the sterility testing method for each formulation. [USP 797 Section 12.2]	
STERILITY TESTING QUANTITY & VOLUME DETERMINATION: The minimum quantity of each container tested for sterility is per USP <71> Table 2 and the number of containers tested in relation to the batch size is per USP <71> Table 3. MULTI-DOSE, NON-PRESERVED AQUEOUS CSPs: Multi-dose, non-preserved aqueous CSPs (i.e., topical, or ophthalmic solutions) are prepared for use by a single patient, and labeled to indicate that once opened, the CSP must be discard after 24 hours if stored at controlled room temperature or 72 hours when stored under refrigeration. [USP 797 14.5]	
MULTI-DOSE CSPs USED AS A COMPONENT: Meet the criteria for anti-microbial effectiveness testing (see <51>) if aqueous, are stored under the conditions upon which the BUD is based, Multiple-dose CSP after initially entered or punctured, are not used for longer than the assigned BUD or 28 days, whichever is shorter. City: Oklahoma City State: OK Zip: 73104

Telephone: 405-271-1144

13. What is your procedure for visual inspection of compounded sterile products?

All compounds undergo visual inspection by a pharmacist before sterilization during compounding and after sterilization while product is waiting for endotoxin, sterility and potency testing. Once results are back, batch is removed from quarantine and visually inspected for a 3rd time by a pharmacist. All of these checks are documented in Pharmacy Keeper. Each final dosage form is checked by a pharmacist 2 times, prior to dispensing (once when labeling dosage form and when final checking the prescription). The inspections are conducted under adequate lighting using both white and black contrasting backgrounds to detect visible particulate matter, discoloration, cloudiness, container defects, or leakage with a box light and magnifier glass. We examine the solution for floating particles or precipitates, ensuring the product appears clear and consistent with expected characteristics. Container integrity, labeling accuracy, and proper sealing must also be verified by a pharmacist. Any CSP that fails inspection must be rejected, quarantined, and investigated, with findings documented. We also reverify if a prescription is not sent out that same day prior to selling if filled more than 24 hours prior.

14. How often do you perform glove fingertip and medial fill testing?

Initially we do 3 sets for all new employees and then every 3 months for hands on compounding personnel and every 6 months for those who only oversee it or are ancillary and do not go in lab often.

We have completed temperature studies on our shipping containers and have modified as the seasons have changed. As it got warmer we adjusted our container and retested it, added dry ice and multiple ice packs to ensure in the summer months, everything is getting there at proper temperature. We also use spot-c labels for patients to verify it did not go over a certain temperature.

Avoid leaning over the work area and resting hands on the work area. Do not allow head to enter the ISO Class 5 PEC. Ensure critical sites receive first air from HEPA filter. Do not allow hands, equipment or supplies to come between (shadow) critical sites and first air. Do not allow critical sites to touch hands or any nonsterile surface. Critical sites include but are not limited to needles; syringe tips, inner shafts and barrels; rubber stoppers on vials and IV bags; and open tops of vials and beakers.

3.6 **Competency Assessment**

3.6.1 **Sterile Compounding**

3.6.1.1 Sterile compounding personnel (including oversight personnel) must be trained and observed and interviewed for competency on sterile compounding and aseptic technique prior to performing sterile compounding independently. Competency must be continually evaluated and documented at least annually. Training and competency must include ensuring personnel understand the requirements in USP <797> as well as

3.6.1.1.1 Hand hygiene and garbing

3.6.1.1.2 Cleaning and sanitizing

3.6.1.1.9 Principles of movement of materials and personnel within the compoundin area

3.6.1.2 Compounding technique must be observed by a qualified person with media fills (and observed competency assessments that includes interviewing personnel) to assess sterile compounding skills prior to first performing sterile compounding (or overseeing sterile compounding) and repeated every three

months (Category 3 compounders), every six months (Category 2 compounders), and every twelve months (Oversight personnel who do not compound) and upon evidence of poor technique. Document on Competency Assessment Sterile Compounding (Attachment 5).

3.6.1.3 Sterile compounding personnel must perform media fill testing under conditions that closely simulate the most challenging or stressful conditions encountered. A post garb and post compounding gloved fingertip sample must be performed on each hand along with a post compounding surface sample of the direct compounding area. Incubate gloved fingertip and surface samples at 30° - 35°C for no less than 48 hours followed by 20° - 25°C for no less than 5 days. Post garb gloved fingertip samples must not exceed 0 cfu. Post media fill gloved fingertip samples and surface samples must not exceed 3 cfu. Incubate media fill at 30° - 35°C for 7 days followed by 20° - 25°C for 7 days. Note that sterile compounding personnel must pass three successive gloved fingertip samples on each hand with zero cfus prior to performing sterile compounding independently. Document on Attachment 5 or 5D.

W. HAZARDOUS DRUG HANDLING & COMPOUNDING – ALL CATEGORIES

DESIGNATED PERSON: The entity has a Designated Person who is qualified and trained to be responsible for implementing appropriate HD procedures, overseeing compliance with USP 800 requirements, ensuring environmental control of the storage and compounding areas, monitoring HD facility operations, testing, and acting on results. [USP 800 Section 4]	
HAZARD COMMUNICATION PROGRAM (HCP): Facility has SOPs to ensure effective training regarding proper labeling, transport, storage, and disposal of HDs and use of Safety Data Sheets. The HCP and HD SOPs include a written plan describing 1) how USP 800 requirements are implemented, 2) HD chemical container labeling with the identity of the material and appropriate hazard warnings, 3) readily accessible location of HD chemical SDSs known and accessible by all personnel, 4) HD risk training and information provided to all personnel with HD exposure risk before initial HD handling work assignment and whenever hazard changes, 5) personnel of reproductive capability written acknowledgement of understanding of HD handling risks. [USP 800 Section 8]	
LIST OF HAZARDOUS DRUGS & ASSESSMENT OF RISK: Facility maintains a list of HDs that includes any items on the current NIOSH that the entity handles. The list is reviewed every 12 months and whenever a new agent or dosage form is used. All HD drugs follow the requirements of USP 800 unless an assessment of risk (AOR) is performed. If an assessment of risk approach is taken, the entity must documents what alternative containment strategies and/or work practices are being employed for specific dosage forms to minimize occupational exposure. The AOR minimally contains the type of HD, dosage form, risk of exposure, packaging, and manipulation considerations. The HD drug list & AOR is reviewed at least every 12 months and whenever a new agent or dosage form is used. [USP 800 Section 2]	
CONTAINMENT REQUIREMENTS: All antineoplastic HDs requiring manipulation and HD active pharmaceutical ingredients (APIs) on the NIOSH list follow all the requirements of USP 800. [USP 800 Section 2, Box 1]	
HD HANDLING, RECEIPT & STORAGE SOPs: SOPs are created and followed for the safe handling of HDs used by the facility. [USP 800 Section 17]	
HD HANDLING AREAS, SIGNAGE, & ACCESS: Signage designating HD handling areas are prominently displayed and access to HD handling areas is restricted to authorized personnel. Designated areas are available for receipt, unpacking, storage, and sterile compounding of HDs. [USP 800 Section 5]	
HD STORAGE: HDs are stored to prevent spillage or breakage, off floors, and in areas appropriate for natural disasters. Antineoplastic HDs and HD API are stored separately from non-HDs to prevent contamination and personnel exposure. HD storage areas are externally ventilated and negative-pressure rooms with at least 12 ACPH. Refrigerated antineoplastic HDs are stored in a dedicated refrigerator, in a negative pressure area with at least 12 ACPH. Pass through refrigerators are not used. [USP 800 Section 5.2]	
STERILE HDs COMPOUNDED IN A C-SCA: C-SCA maintains a minimum of 12 ACPH of HEPA- filtered air and has negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800, sections 5.3.2 Table 3]	
C-SEC DESIGN AND ENGINEERING CONTROLS: The C-SEC has fixed walls physically separated from other preparation areas, is externally ventilated has 30 ACPH, and negative pressure to adjacent areas of -0.01" w.c. to -0.03" w.c. [USP 800 Section 5.3.2 Table 3]	
C-SEC ACCESS: The Ante Room used for entry into the negative pressure buffer room has fixed walls and maintains a minimum of 30 ACPH of HEPA-filtered air, positive pressure of +0.02" w.c. to all adjacent unclassified areas, and ISO7 or better classification. Alternatively, a negative-pressure HD buffer entered exclusively through a positive pressure non-HD buffer room contains a line of demarcation (LOD) within the negative-pressure buffer room for donning/doffing HD PPE and a method a transport of HDs, HD CSPs, and HD waste into and out of the HD buffer (e.g., pass-through chamber). Pass through chambers are included in semi-annual facility certification. [USP 800 Section 5.3.2]	
C-SEC SINK & SAFETY EQUIPMENT: A sink is available for hand washing and an eyewash station and/or other emergency safety precautions meeting applicable laws and regulations are readily available and located where operation does not interfere with ISO classifications. Sinks are located at least 1 meter from the entrance into the buffer room (or at least 1 meter from the C-PEC in a C-SCA). [USP 800 Sections 5.3 & 5.3.2]	
C-PEC LOCATION, VENTING, & OPERATION: All C-PECs used for sterile HD compounding (e.g., CACIs or BSCs), are located within a C-SEC or C-SCA, externally vented, and maintain an ISO 5 or better air quality. C-PECs operate continuously if supplying some or all the negative pressure in the C-SEC or if used for sterile compounding. During power outages, repairs, or relocation, C-PEC use is suspended immediately. Once C-PEC power is restored, all PEC surfaces are decontaminated, cleaned, and disinfected, and compounding is not resumed until the manufacturer's specified recovery time has elapsed. [USP 800 Section 5.3.2]	
REQUIRED HD PPE: When compounding HDs, gowns, head, hair, shoe covers, and two pairs of chemotherapy gloves are donned per facility SOPs. Chemotherapy gloves are tested to ASTM standard D6978 (or its successor) and are powder free and two pair of chemotherapy gloves are donned per SOP. Gloves are inspected for physical defects. Gloves are changed when torn, punctured, or contaminated. Personnel wash hands with soap and water after removing gloves. HD gowns are disposable, resistant to permeability by HDs, close in back, are long sleeved, closed cuff, and seamless. Gowns are changed per manufacturer's permeation information; if no data is available, HD gowns are change every 2-3 hours or immediately after a spill or splash. Gowns are limited to HD handling areas and are donned over the sterile compounding garment. When compounding, a second pair of shoe covers is donned before entering the C-SEC and doffed when exiting the C-SEC. HD PPE is disposed of appropriately prior to exiting the C-SEC. Chemotherapy gloves and sleeve covers (if used during compounding) are carefully removed and discarded immediately into an appropriate waste container inside of the C-PEC or contained in a sealable bag for discarding outside of the C-PEC. Reusable PPE is decontaminated and cleaned after each use. [USP 800 Section 7]	
EYE AND FACE PROTECTION: Appropriate eye (goggles) and face protection (face shield) are worn when there is a risk for spills or splashes or when working outside of a C-PEC. Surgical masks are not used when respiratory protection is required per SOP and/or AOR as protection from HD exposure. [USP 800 Section 7.4]	
HD TRAINING & COMPETENCY ASSESSMENT: Personnel who handle HDs are trained and demonstrate competency initially before independently handling HDs, annually, and when a new HD medication, process, SOP, or equipment is introduced. Training minimally includes an overview of the entity's HD list and their risks; review of HD SOPs; proper use of PPE, equipment, and devices; prevention of HD exposures and spills; HD exposure and spill response; use of a spill kit, PPE, and NIOSH-certified respirators; and HD disposal. Based on job duties, personnel receive additional HD training in HD acquisition and receipt, preparation, compounding, dispensing, labeling, storage, and transport. Training and competency assessments are documented. [USP 800 Sections 8, 9, 11.1, 16, & 17]	
HD ATTESTATION: Personnel of reproductive capability have a written acknowledgement attesting to their understanding of HD handling risks. [USP 800 Section 8]	
DEDICATED HD EQUIPMENT: Disposable or cleanable equipment for compounding (e.g., mortar and pestle, graduated cylinder, spatulas) is dedicated for use with HDs. [USP 800 Section 13]	
NON-HD COMPOUNDING IN A C-PEC: Non-HDs compounded in a HD C-PEC are placed in protective outer wrapping, labeled for PPE handling precautions, and treated as an HD. The C-PEC worksurface is decontaminated between compounding of different HDs. [USP 800 Section 5.3.2 and Table 3]	

DEACTIVATION, DECONTAMINATION, CLEANING & DISINFECTION (D/D/C/D): Areas where HDs are handled and all reusable equipment and devices are deactivated/decontaminated, and cleaned. Sterile compounding areas and devices are subsequently disinfected. Written procedures for decontamination, deactivation, cleaning, and disinfection are available and followed. Procedures include agents used, dilutions (if used), frequency, and documentation requirements. Agents selected are appropriate for the type of HD contamination(s), location, and surface materials. Sterile 70% IPA is used to remove residue left on sterile surfaces and compounding areas by decontaminating agents. [USP 800 Section 15]	
D/D/C/D TRAINING & PPE REQUIREMENTS: Personnel are trained in deactivation/decontamination, cleaning, and disinfection to protect themselves and the environment from contamination. Personnel wear appropriate PPE resistant to cleaning agents used, including 2 pairs of ASTM-tested chemotherapy gloves and impermeable disposable gowns. Eye protection and face shields are worn if splashing may occur. [USP 800 Section 15]	
C-PEC D/D/C/D: C-PEC is decontaminated at least daily (when used), after as spill, before and after certification, voluntary interruption, or if ventilation tool is removed. The C-PEC worksurface is decontaminated between compounding of different HDs. The area under the work tray of a C-PEC is deactivated, decontaminated, and cleaned at least monthly. [USP 800 Section 15.2]	
HD LABELING, PACKAGING, TRANSPORT & SPILLS HANDLING: Facility follows SOP for the labeling, handling, packaging, and transport of HDs which addresses the prevention of spills/exposures, training for exposure, and spill handling. HD CSPs are identified as hazardous and labeled with special handling precautions. Labeling process for compounded HD products does not introduce contaminated materials into non-HD areas. [USP 800 Section 11 & 11.2]	
SPILL KITS, & SINGAGE: Spill kits are readily available with appropriate supplies, PPE, and signs to restrict access to affected areas, restriction posted, and documentation of spills occur when needed. [USP 800 Section 16]

Section Name: Release Inspections & Testing	Policy Name: CSP Release Inspections & Testing
Policy Number/ Version: P-1201.1	Last Revision/Review Date: 12/31/2024

1. Overview and Scope

a. This policy describes the procedures for Compounded Sterile Preparations (CSP) release inspections, quality control testing, and final verification of CSPs prepared within Source Pharmacy.

b. Release inspections and testing are an important component of product quality control measures and the final verification of CSPs prior to release and dispensing. Release inspections and testing includes, but is not limited to:

   i. **Visual inspections** – physical product characteristics, labeling, container closure system.

   ii. **Quality control tests** – pH, tonicity (osmolarity), refractive index, sterility, endotoxin level .

   iii. **Physical measurements of final CSP / batch yield** – weight and/or volume.

   iv. **Calculations and conversions verification.**

c. This policy addresses the release inspection and testing requirements stated in the current version of USP <797> and in accordance with the Florida State Board of Pharmacy and related state statutes governing sterile compounding.

2. Policy

a. Release inspections of and tests on CSPs are performed by:

   i. Compounder during and immediately after compounding.

   ii. Verifying Pharmacist conducting in-process and/or final CSP verification and sign-off prior to release and dispensing.

   iii. Pharmacist prior to release and dispensing if CSP is released and dispensed more than 24 hours after completion of compounding.

b. CSPs undergo visual inspection prior to release and dispensing to ensure preparation has no visual defects and its appearance meets expectations as characterized in the manufacturer's labeling, Master Formula Record (MFR) or Pharmetika (IV Workflow System).

c. CSP labeling is visually inspected and compared to the prescription or medication order to ensure accuracy. Label positioning is checked to ensure important device measurements and manufacturer labeling and product identification is not obstructed.

d. CSP container closure systems (i.e., final dispensing container and packaging) are visually inspected to ensure they are free of leaks, cracks, improper seals, and other defects that could affect sterility, stability, or CSP quality.

e. CSPs with observed defects are promptly rejected, clearly labeled as rejected, and segregated from active stock to prevent use before disposal occurs. Appropriate disposal of the rejected CSP according per policy **(P-1903)**.

f. When CSPs are not released or dispensed on the day of preparation and verification, a visual inspection of the preparation, label, and container closure system occurs immediately before it is released or dispensed. Attention is given to defects that occur during storage including precipitation, cloudiness, separation/loss of homogenity, or leakage.

g. CSPs compounded at Source Pharmacy are not released or dispensed prior to the successful completion and documentation of required release inspections and tests.

h. CSPs are quarantined until pending release test results are known including, but not limited to, the following quality control tests performed on site by qualified personnel and/or analytical laboratories:

   i. Sterility Testing (per USP <71> standards).

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.

ii. Endotoxin Testing (per USP <85> standards).
iii. Antimicrobial Effectiveness Testing (per USP <51> standards).
iv. Pending CSP, component, or container closure sterilization cycle and/or load validation results (per USP <1229> & related Chapters).

i. CSP defects indicating sterility or stability issues which are detected prior to release or dispensing are investigated to determine the cause of the defect(s) and corrective actions are taken if appropriate. During the investigation, CSPs are quarantined pending the outcome. Results of the investigation, corrective actions, and disposition of the quarantined CSPs are documented and readily retrievable.
j. Compounding Personnel who perform release inspections and testing receive foundational knowledge education, hands-on training and skills development, and undergo an observed competency assessment prior to performing job duties independently.
   i. Ongoing training and education are provided when new or modified release criteria are introduced and at the discretion of the Designated Person(s).
   ii. Ongoing competency assessment is successfully completed at least once annually.
   iii. Documentation of training and competency assessments is retained and readily retrievable.

iii. Considerations for selecting and defining release criteria procedures and expected results:
   a. CSP Category.
   b. Compatibility and appropriateness of release inspections, tests, and testing apparatus/supplies for the given CSP formulation, dosage form, and final drug yield

   d. Potential for final CSP and/or route of administration to cause patient harm (e.g., intrathecal versus intramuscular injection).
   e. Additional regulatory and statutory requirements.
   f. Number/quantity of sample(s) needed for testing and the impact to the total compounded quantity or yield.

iv. Document selected release inspections and testing requirements, including procedures, testing apparatus, and expected results in the appropriate system and/or formulation record for each CSP including:

b. CSP Release Inspections & Testing

i. Conduct the specific release inspections and testing defined for each CSP according to the MFR, IVWS, or CS procedures and instructions.

c. Visual Inspections - Liquid Dosage Forms

i. Wipe the container closure system with a damp, lint-free wipe to remove any external particles.
ii. Gently agitate and/or swirl the CSP, with a light source shining behind or under the CSP and hold in front of both a black and white background.
iii. Observe for color, clarity, precipitate/foreign matter, phase separation, etc. Use magnifying glass if needed.
iv. Reject CSP if any deviations are observed and document results on CR, IVWS, or CS.

d. Visual Inspections - Semi-Solid & Solid Dosage Forms

i. Prior to terminal sterilization or placement in final container closure system:
    a. Visually inspect CSP dosage forms for shape, color, homogeneity, size, surface characteristics (e.g., smoothness, shine or mat finish).
    b. Reject CSP if any deviations are observed and document results on CR, IVWS, or CS.
ii. After terminal sterilization (if container closure system is not opaque or tinted):
    a. Wipe the container closure system with a damp, lint-free wipe to remove any external particles.
    b. Hold CSP above or in front of a light source and inspect CSP for shape, color, size, and surface characteristics.
    c. Reject CSP if any deviations are observed and document results on CR, IVWS, or CS.

e. Weight of Semi-Solid or Solid Dosage Forms

i. Zero or tare analytical balance with weigh paper/boat (or similar).
ii. For single dose CSP:
    a. Weight CSP and compare weight to excepted or theoretical weight and determine the percent deviation. Acceptable deviation is + 10% unless otherwise specified in the MFR, IVWS, or CS.
    b. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.
iii. For multiple dose (batched) CSPs:
    a. Weigh a representative sample of the finished batch 10% or 10 individual units whichever is greater.
    b. Record weights of each sample and calculate the mean of the total samples.
    c. Compare individual and mean weights to excepted or theoretical weight and determine the percent deviation. Acceptable deviation is +5% unless otherwise specified in the MFR, IVWS, or CS.
    d. If an individual CSP weight deviation exceeds the acceptance parameter, reject the individual CSP and repeat entire process with a new batch of CSPs. If additional single CSPs exceed the weight deviation parameter, quarantine the batch and consult with the DP for next steps.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.

e. If the mean weight of the sampled CSPs exceeds the acceptance parameter, quarantine the batch and consult with the DP for next steps.
f. Record all results, percent deviations, and outcomes on/in the CR, WS, or CS.

f. Volume of Liquid Dosage Forms

i. If density of the CSP is known, volume (in milliliters) is calculated by measuring the mass of the liquid in grams (less the dry weight of the container) and divided by the density.
ii. For liquid dosage forms not in a final container closure system (pre-sterilization):
   a. Transfer the full CSP volume to a graduated cylinder designed for volumetric measurements not exceeding 40% of the total volume to be measured. Use proper technique to observe the meniscus and record results on the CR, WS, or CS.
   b. Acceptable deviation is + 5% unless otherwise specified in the MFR, IVWS, or CS.
   c. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.
iii. For Small Volume Single Dose Containers, Cartridges, or Prefilled Syringes (< 100 mL):
   a. With a dry syringe (or similar) assembly, draw up entire contents of the container (if appropriate).
   b. Remove air bubbles and transfer to an appropriately sized graduated cylinder.
   c. Alternatively, remove the stopper or closure device of the container (or syringe) and transfer solution into a graduated cylinder.
   d. Acceptable deviation is + 5% unless otherwise specified in the MFR, IVWS, or CS.
   e. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.
iv. Additional considerations:
   a. For batched small volume, single-dose containers, sample a representative number.
   b. If individual volumes are < 2 mL per container, multiple containers can be pooled and measured.
v. For Multi-dose Containers:
   a. With a dry syringe assembly, draw up the entire contents of the container.
   b. Remove air bubbles and transfer to an appropriately sized graduated cylinder.
   c. Alternatively, using individual dose appropriate syringes, precisely draw up the number of doses in the container.
   d. Acceptable deviation is + 5% unless otherwise specified in the MFR, IVWS, or CS.
   e. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.
vi. For Large Volume Solutions (> 100 mL):
   a. Open one large volume container and transfer to a volumetric cylinder (not exceeding 40% of the total volume to be measured).
   b. Acceptable deviation is + 5% unless otherwise specified in the MFR, IVWS, or CS.
   c. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.

g. pH Determination

i. Calibrate pH meter prior to use.
   a. Calibration with an ATC/Temp probe in the pH-AUTOLOCK Mode)

b. Turn the unit on. In pH mode, press "**Clear**" key for 5 seconds, all LCD elements will lit up. The meter clears all calibration values stored in internal memory.
c. Connect the pH electrode to the BNC connector and the ATC/Temp probe to the ATC/Temp connector of the unit: "**ATC**" icon will lit up. "**pH**" icon and "**AUTO**" icon will lit up. The "**CAL**" icon begins to flash.
d. Rinse the pH and ATC/Temp probes in distilled water and immerse them in the first buffer solution. Allow temperature reading to stabilize, then press and hold "**Stand**" key for 2 seconds to calibrate. The "**WAIT**' icon will flash until the unit
e. detects a stable reading. Once the unit calibrates the first point, the selected buffer will lit up while two other selectable buffers start to flash. The unit is ready to be sloped at the 6 second buffer. [Note: If the first buffer solution is 7.00 or 6.86 pH, at this moment, press the "**Mode**" key. The unit will exit the calibration mode. Single point calibration is complete. If the first buffer solution is 1.68, 4.00, 4.01, 9.18, 10.01 or 12.46 pH, at this moment, the unit will automatically exit the calibration mode. Single point calibration is complete].
f. Rinse the pH and ATC/Temp probe in distilled water and immerse them in the second buffer solution (either 4.00 / 4.01 pH or 9.18 / 10.01 pH corresponding to the flashing number on display). Allow temperature reading to stabilize, then press "**Slope**" key to calibrate. The "**WAIT**" icon will flash until the unit detects a stable reading. Once the unit calibrates the second point, the selected two buffers lit up and the remaining buffer starts to flash. The unit is ready to be sloped at the third buffer. [Note: At this moment, press the "**Mode**" key, the unit will exit the calibration mode. Dual point calibration is complete.]
g. The third point, the fourth point and the fifth point are the same as the second calibration point. When the unit completed the fifth point calibration, press the "**Mode**" key and exit calibration.
h. The unit calculates and compensates for the pH electrode slope deviation corresponding to the values of the calibrated buffers. After calibration, press and hold "**Mea./Eff.**" key for about 5 seconds to display the new electrode efficiency and
i. offset.

ii. Measurement with an ATC/Temp probe in the pH AUTOLOCK mode.
a. Connect the pH electrode to the BNC connector and the ATC/Temp probe to the ATC/Temp connector of the unit. The "ATC" icon will lit up.
b. Press "**Mode**" key until "**pH**" icon and "**AUTO**" icon lit up.
c. Rinse the pH electrode and ATC/Temp probe with distilled water and immerse in the sample to be measured. Remove any air bubbles trapped around the probe by shaking or stirring the probe.
d. Press the "**Mea. / Eff.**" key. The "WAIT' icon will start flashing. The unit is waiting for a stable reading. The display will track the pH value as sensed by the pH electrode and the ATC/Temp probe.
e. When the '**WAIT**" icon disappears, the reading is then "**LOCK**" and will not respond to further changes from the sample. The pH value shown is the pH value of the sample at the displayed sample temperature.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

f. [**Note:** For samples that are inherently unstable, the unit will not AUTOLOCK. In this case, use the pH NON- AUTOLOCK mode for measurements]. Record buffer solutions used, solution temperatures, and final CSP pH reading on/in the CR, IVWs, or CS.

iii. Reject CSPs exceeding the acceptable pH range or +0.5 of the expected pH for the formulation.

iv. Reject CSP if deviation exceeds the acceptance parameter; record results and percent deviation on/in the CR, WS, or CS.

Section Name: Personnel Training & Evaluation	Policy Name: Sterile Compounding Personnel Training and Competency
Policy Number/ Version: P-0204.1	Last Revision/Review Date: 12/31/2024

1. Overview and Scope

a. This policy serves as the written Sterile Compounding Training and Evaluation Program for Source Pharmacy and describes the procedures for training and evaluating sterile practice knowledge and competencies of personnel involved in or having direct oversight of compounded sterile preparations (CSPs). Refer to **Form F-0210** for a summary of the Sterile Training and Competency Program.

b. The Sterile Compounding Training & Competency Program equips compounding personnel with didactic knowledge and practical training in the foundational principles of sterile compounding. Competency evaluations validate proficiency in the required skills necessary to perform related job functions and maintain the quality of the sterile environment. The Program consists of initial and ongoing training and evaluation in the following areas:

   i. **Sterile Compounding Core Competencies and Principles Knowledge-** demonstrates Compounding Personnel possess the knowledge of and proficiency in the skills necessary to perform sterile manipulations and achieve and maintain appropriate environmental conditions.

   ii. **Hand Hygiene and Garbing Competency (including Gloved Fingertip and Thumb Sampling)-** ensures Compounding Personnel can safely and effectively complete hand hygiene, garbing, and donning of gloves without touch contamination.

   iii. **Aseptic Manipulation Competency (including Media Fill)-** validates Compounding Personnel aseptic technique and related manipulations within an ISO 5 compounding environment.

c. The USP Expert Committee has recognized an effective sterile compounding practice involves personnel, vendors, and other visitors that are not directly compounding or performing compounding related activities. Consequently, training and evaluation requirements are defined based on role and potential risk for contaminating the sterile compounding areas.

   i. **Compounding Personnel–** individuals performing or directly overseeing compounding activities as well as the Designated Person(s).

   ii. **Inventory and Cleaning Personnel–** individuals performing restocking or cleaning and disinfecting activities and that do not directly or indirectly participate in compounding CSPs.

   iii. **In-Process & Final Verification Personnel–** typically pharmacists, who do not participate in compounding or the oversight of compounding activities.

   iv. **Other Personnel & Visitors–** individuals who have a need to enter compounding areas (under supervision) but do not participate in or support the compounding activities in any way.

d. When performing aseptic manipulations according to the related USP standards and training and qualification requirements, personnel compounding the following types of sterile compounds are exempt from this policy:

   i. Licensed allergenic extracts.

   ii. Blood-derived and other biological materials.

   iii. Sterile radiopharmaceuticals.

   iv. Immediate-use compounds.

   v. Sterile drug preparation per approved manufacturer's labeling.

   vi. Proprietary bag and vial systems docked and activated for immediate administration to a single patient.

   vii. This policy applies to compounding only non-hazardous CSPs.

c. Garbing Competency and Gloved Fingertip and Thumb Sampling Assessment Procedure

i. Remove sampling plates (or alternative sampling device) from refrigerator in manufacturer's overwrap and check expiration dates; do not use expired media.

ii. Collect other supplies needed black, fine tipped permanent marker and clear tape or wax film to seal sampling device, disinfect with sIPA 70%, and move supplies to controlled environment adhering to material transfer standard operating procedures **(P-0801)**.

iii. Allow sampling plates to come to room temperature just prior to sampling.

iv. Enter media lot numbers, expiration dates, and manufacturer on Personnel Sampling Log **(F-1803)**.

v. DP or AT labels the base (i.e. agar side) of the sampling plates legibly around the outer edge (or permanently affixed lid on slide). Label each sample plate with sample type (e.g. "GFS"), hand (e.g., "L" -left or "R" - right), sample number (e.g., 1, 2, or 3) for initial competency, date, and initials of individual.

vi. Complete hand hygiene and garbing under direct observation. See **(P-0301) Hand Hygiene and Garbing.**

d. GFS – LAFW:

i. Don sterile gloves but do NOT apply sIPA 70% to gloved hands.

ii. DP or AT sanitizes sterile gloves with sIPA 70%, removes the lid of a labeled sampling plate, and holds vertically.

iii. Compounding personnel gently rolls the pad of each finger, one at a time, in an arch across the top of the agar surface ensuring not to overlap fingerprints. A thumb print is then gently placed in the middle of the plate.

iv. The lid is immediately replaced, and the sample is set to the side.

v. Repeat sampling process for the second hand; ensure the correctly labeled plate is used.

vi. Immediately, after both hands have been sampled and without touching any surfaces, complete the garb doffing process.

vii. During the Initial GFT competency assessment, repeat the entire process two more times.

viii. After all samples are collected, seal plates with wax or tape to ensure the lid is not dislodged during transit, incubation, or results inspection.

e. Aseptic Manipulation Competency Procedure (including Media Fill and Post Media Fill Gloved Fingertip and Surface Sampling)

i. Collect supplies needed for the media fill testing, post media fill GFS (2 plates per media fill test), and surface sampling (1 plate per media fill test) Needed supplies include, but are not limited to: media fill components such as soybean casien bags, vials, sterile powder for reconstitution; compounding supplies such as empty EVA or PVC bags; transfer sets, needles, adaptors, syringes, sterilizing filter(s) or other supplies needed for non-sterile-to-sterile media fill; sample plates, black fine tipped permanent marker, clear tape or wax film to seal sampling device.

ii. When more than one media fill test is to be completed, ensure all necessary media, supplies, and sampling plates for each media fill are collected and organized prior to initiating assessment.

iii. Check all growth media components for expiration date. Do not use expired media. Allow sampling plates to come to room temperature just prior to sampling.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

iv. Inspect all sterile media fill components for cracks, leaks, or other potential factors that may have compromised product's sterility. Do not use media suspected of contamination or sterile container defects.
v. Disinfect all media and supplies with sIPA 70%, and move supplies to controlled environment.
vi. Enter media lot numbers, expiration dates, and manufacturers on the written Media Fill competency form.
vii. When more than one media fill test is to be completed, record each media fill on a separate competency form.
viii. DP or AT labels the base (i.e. agar side) of the sampling plates legibly around the outer edge (or permanently affixed lid on slide) and the final dosage unit(s) for the media fill test. Label each sample with sample type (e.g. "MF", "PMF-GFS", or "SS"), hand (e.g., "L" -left or "R" - right), date, and initials of individual.
ix. Stage all media and supplies within reach of Primary Engineering Control (PEC).
x. Disinfect gloved hands and all components with sIPA 70% prior to being moved into the ISO Class 5 area of the PEC.
xi. Perform media fill under direct observation per procedure **F-0201**.
xii. sIPA 70% is used throughout the media fill process to sanitize sterile gloves, critical sites, and the direct compounding area; however, do not apply sIPA 70% to gloved hands or the DCA after the final step of the media fill procedure.
xiii. Nonsterile solutions are reconstituted and manipulated in a manner that simulates typical nonsterile-to-sterile compounding activities.
    a. Commercially available nonsterile soybean–casein digest powder is dissolved in non-bacteriostatic water creating a 3% nonsterile solution as part of the procedure.
    b. At least 1 container of non-sterile broth is compounded and incubated as the positive control to demonstrate growth promotion, which is indicated by visible turbidity upon incubation.
    c. Retain sterilizing filter for bubble point testing and filter packaging displaying the lot and expiration of the filter to record on and/or affix to the media fill records.
xiv. Immediately following the final step of the media fill procedure and before sIPA is applied to gloved hands or the DCA:
    a. DP or AT performs the post media fill GFS (PMF-GFS) and DCA surface sample inside the ISO 5 PEC. GFS sampling is performed for both hands with one plate per hand. Refer to the GFS sampling procedures above in 4.1.
xv. Perform a bubble point test on the sterilizing filter and record both the expected and achieved PSI on the Media Fill form.
    a. If the sterilizing filter does not pass the bubble point test, the media is considered non-sterile and is re-sterilized inside an ISO 5 PEC with a new sterilizing filter. The new filter undergoes bubble point testing and PSI results are recorded.
xvi. Remove all other trash from the PEC and clean and disinfect PEC prior to commencing compounding.
xvii. Remove and replace sterile gloves immediately without touching any other surfaces; gloves are contaminated with growth medium. Repeat hand hygiene and garbing prior to returning to compounding activities.

f. Selection, Incubation, & Interpretation of Media

i. Media Selection:

a. Select a general microbial growth agar (plate) supporting both bacterial and fungal growth, such as trypticase soy agar (TSA), for gloved fingertip and surface sampling. Growth medium contains additives that neutralize residual cleaning solutions, such as lecithin and polysorbate 80.

b. For media fill procedures, replace all CSP components with soybean–casein digest media components.

c. Obtain a Certificate of Analysis (COA) from the growth media supplier or manufacturer. The DP reviews and retains the COA to ensure the culture media supports growth of microorganisms (as defined in Table 1 of USP <71>). Store media per manufacturer instructions and media is used in accordance with manufacturer instructions and before the expiration date of the media.

g. Media Incubation & Interpretation:

i. Locate calibrated incubators monitored by NIST certified temperature gauge outside of the sterile compounding area. A minimum of two incubators are available:

a. Incubator 1: calibrated and maintained at 20° to 25°C.

b. Incubator 2: calibrated and maintained at 30° to 35°C.

ii. Invert gloved fingertip and surface sample agar plates during incubation to ensure moisture condensation does not collect and fall onto the agar surface which can contaminate and/or invalidate the results.

iii. Incubation temperatures and timeframes:

Competency	Media	1st Incubation	2nd Incubation	Total Incubation Timeframe
Gloved fingertip and surface samples	TSA agar plate, paddle or slide with polysorbate 80 & lecithin (neutralizers)	≥ 48 hours at 30°C - 35°C (86-95°F)	≥ 5 Days at 20°C - 25°C (68-77°F)	≥ 7 Days
Media fill test final dose unit(s)	Soybean casein digest (all components)	7 Days at 20°C - 25°C (68-77°F)	7 Days at 30°C - 35°C (86-95°F)	14 Days

iv. Only the DP is qualified to manage, read, and interpret media places or moves media into and out of incubators.

v. Record date, time, incubator temperature, and person(s) moving media into and between incubators on competency form(s).

vi. Read and record CFU counts per sampling plate and examine media fill bags/units for visible changes daily or, at a minimum, when media are moved from the first to the second incubator. Record interim results on competency form(s).

vii. Read and record CFU counts per sampling plate at the conclusion of the full incubation; total CFU counts from all plates to determine the final CFU count results. Record results on the competency form(s).

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

viii. Examine the media fill bag/units for any visible turbidity or changes indicating growth at the conclusion of the full incubation against a white and black background in a well-lit area, record either a pass or failed result on the Media Fill form.

ix. Complete the necessary chain of custody forms and prepare, package, and ship/deliver media per the specifications provided by the 3rd party laboratory.

x. The DP reviews the Certificate of Analysis and results report provided by the laboratory and takes appropriate measures to either complete and store the documentation for a successfully completed assessment or evaluate, recommend, and document next steps for failed media results.

h. **Corrective Action for Competency Failure**

i. Any personnel failing to demonstrate competency during a foundational knowledge exam or hands-on skills assessment is coached and reinstructed on the applicable policy, technique(s), and foundational knowledge related to the skill; and subsequently re-evaluated by the DP or AT.

ii. Evaluation and corrective action for observed competencies is documented within the competency form **(F-0601)**. Corrective action records are used for long-term assessment of personnel competency and potential contributing factors to maintaining a state of microbial control within the sterile compounding environment.

i. Extended Absence or Frequency of Compounding

i. If personnel are not actively engaged in CSP activities for 6 months or are on extended leave during the time their observed competencies are due, initial training and competency is assigned upon their return.

ii. Initial training and competency assessments are completed before re-entry to CSP activities and compounding independently.

j. **Ongoing Training**

i. The DP is responsible for assessing the training needs of personnel and the appropriate method for communication and delivery as new or updated equipment, components, recipes, or procedures are introduced.

ii. Ongoing training may be communicated in a staff meeting, email, and/or formal program.

iii. Ongoing training will be documented in the Training Roster **F-0211**. All supporting documentation including but not limited to: learning objectives, training materials, or post education testing will be attached to the Training Roster **F-0211**.

k. **Monitoring of Compounding Activities**

i. The DP conducts quarterly tracer observations of CSP personnel and processes.

ii. If deficient practices are observed, the DP discusses the following with the personnel:

a. Identify the issue(s) observed.

b. Review and reinstruct on the expected practice.

c. Confirm understanding with a return demonstration or teach back method.

Section Name: Cleaning, Disinfecting, and Applying Sporicidal Disinfectants	Policy Name: Daily Cleaning and Disinfecting Sterile Compounding Areas
Policy Number/ Version: P-0701.1	Last Revision/Review Date: 12/31/2024

1. Overview and Scope

a. This policy describes the procedures for daily cleaning and disinfecting compounding areas where Compounded Preparations (CSP) are prepared within Source Pharmacy.
b. Surfaces in classified areas and segregated compounding areas are potential sources of microbial contamination. In order to reduce the risk of contact contamination, surfaces within classified areas used to prepare Category 1, and Category 2, are cleaned, disinfected, and have sporicidal disinfectants applied according to the processes and frequencies described in this procedure.
   i. **Cleaning** involves removing organic and inorganic materials (e.g., dirt, debris, microbes, and residual drugs or chemicals) form surfaces with the use of a cleaning agent and manual or mechanical action.
   ii. **Disinfecting** involves using a chemical or physical agent on surfaces to destroy microorganisms including fungi, viruses, and bacteria.
   iii. **Sporicidal disinfectants** are a chemical or physical agents that destroys all vegetative microorganisms including bacterial and fungal spores while applied at a sufficient concentration and for a specified "wet" contact time.
c. Sterile 70% isopropyl alcohol (sIPA) is a staple in day-to-day compounding activities and plays a critical role in sanitizing and reducing the bioburden on gloved hands, surfaces, and materials through both chemical application and physical wiping. sIPA, however, is not a cleaning or disinfecting agent. While it does have some disinfectant properties, it does not possess the broad-spectrum coverage of cleaning, disinfecting, or sporicidal agents and requires a lengthy (and impractical) contact time to truly convey bactericidal or fungicidal activity.

2. Policy

a. Cleaning and disinfecting of all surfaces inside compounding areas, including sinks, as well as the application of a sporicidal disinfectant occur on a regular basis and at a minimum frequency as specified in USP <797> Pharmaceutical Compounding – Sterile Preparations 2022 and according to this policy **(see Section 4a)**.
b. Surfaces in compounding areas are cleaned daily prior to being disinfected with an EPA-registered (or equivalent outside of the US) agent. An EPA-registered (or equivalent) one-step disinfectant cleaner is an appropriate alternative that allows for both processes to occur in one step.
c. Sporicidal disinfecting agents are EPA-registered (or equivalent outside of the US) and allow for cleaning, disinfecting, and sporicidal activity concurrently in a single step.
d. Manufacturer's directions or published data for the minimum wet contact time is followed for each of the cleaning, disinfecting, and sporicidal agents used to ensure the agents have full microbial destroying action.
e. If compounding (and cleaning) is not performed each day, cleaning and disinfecting is completed before reinitiating compounding.
f. Cleaning and sanitizing are repeated when spills occur and when surfaces are visibly soiled.
g. All personnel involved in cleaning and disinfecting of classified compounding and segregated compounding areas receive training and demonstrate competency in Hand Hygiene and Garbing **(P-0301)** initially and at least annually. Refresher training is provided as needed and when changes in procedures or agents occur.

h. All cleaning and disinfecting activities are performed by appropriately garbed personnel using facility-approved agents and procedures including frequency, method, and location of cleaning activity.
i. Sterile cleaning agents are used to clean the interior of, and all equipment housed inside of PECs. Sterile cleaning agents are also used to clean SECs.
j. Cleaning agents and supplies used in PECs and SECs are assigned an expiration (or "in-use") date once opened or prepared; expiration dates are clearly and permanently written on the bottle, container, or wrapping of the supply and do not exceed manufacturer expiration dates or recommended "in-use" dates.

Cleaning Agent or Supply	Location Used	Expiration Date* (from initial puncture use, or preparation)
Ready-to-Use (RTU) STERILE Cleaning, Disinfecting, and Sporicidal Agents	Interior/Exterior PECs and All surfaces in SEC	30 Days
STERILE Premoistened or Low-Lint Dry Wipes	Inside PECs	30 Days unless wipes appear dry

***Consult the manufacturer for dates for specified products in use at your facility or define a more conservative expiration date.**

k. Safety Data Sheets (SDSs) are retained for all cleaning supplies, included in training of cleaning personnel, and are readily retrievable by all compounding staff members.
l. Since cleaning solutions are irritants and can damage the skin and eyes, safety glasses must be worn during cleaning of ceiling and walls; during mixing of cleaning agents and on other occasions when there is an increased likelihood of splashing or dripping of solution.
m. Compounding equipment (i.e. automated compounders, devices or pumps) placed into ISO Class 5 PECs are subject to the same cleaning requirements as the LAFW itself. These devices must be moved during daily cleaning so that the surface underneath may be cleaned and disinfected.

3. Roles & Responsibilities

a. **The Designated Person(s) (DP):**
   i. Ensures cleaning staff receives appropriate training and maintains current cleaning and related competencies.
   ii. Oversees selection of appropriate EPA-registered cleaning, disinfecting, and sporical agents and ensures staff understands and adheres to appropriate dwell times for each agent.
   iii. Ensures the organization or facility maintains a current SDS for each cleaning agent in a readily retrievable format and location and ensures cleaning personnel understand how to access and use the SDS in case of a spill or accident.
   iv. Determines appropriate remedial cleaning requirements for ad hoc and out-of-specification occurrences up to and including a triple clean of effected compounding areas including the following circumstances:
      a. Actionable environmental findings from total particle counts, viable air sampling, or surface sampling results and/or trends.
      b. Scheduled and unscheduled power and/or airflow disruptions directly impacting sterile compounding area(s).

c. Certification of sterile compounding area(s).
d. New or major construction or maintenance work performed within or adjacent to the sterile compounding area(s).

b. Compounding personnel:

i. Undergo training and demonstrate competency initially and at least once annually in skills and competencies related to cleaning and disinfecting.
ii. Adhere to all cleaning procedures including cleaning agent selection, frequency, method, and sequence of cleaning activities (i.e., cleanest to dirtiest).
iii. Ensure appropriate use of sterile 70% IPA before, during, and after the compounding process.
iv. Complete timely documentation of all cleaning activities performed.

4. Procedures

a. Frequency of Cleaning, Disinfection, and Application of Sporicidal Disinfectants – Adapted from USP <797> 2022 Table 8.

Cleaning and Disinfecting		
	Frequency	**Who**
Inside PECs – including all surfaces, direct compounding area and work tray, and equipment used inside the PEC	Daily on days when compounding occurs and when surface contamination is known or suspected	Pharmacy Technician, Compounding Pharmacist, DP, or any trained personnel that have completed both training and competency
Work Surfaces Outside of PEC	Daily on days when compounding occurs - all "high touch" surfaces daily	Pharmacy Technician, Compounding Pharmacist, DP, or any trained personnel that have completed both training and competency
Floors	Daily on days when compounding occurs	Pharmacy Technician, Compounding Pharmacist, DP, or any trained personnel that have completed both training and competency
Sinks	Daily on days when compounding occurs	Pharmacy Technician, Compounding Pharmacist, DP, or any trained personnel that have completed both training and competency

i. Cleaning activities occur from cleanest to dirtiest areas. When performing cleaning, wipe from top to bottom in overlapping strokes so that the surface is thoroughly wetted but not dripping. Allow the cleaning agent PeridoxRTU (germicidal detergent and sporicidal agent) to dwell for 3 minutes and to dry on its own and disinfecting agent (sterile 70% IPA) to dry on its

own. Do not wipe off or dry the surface since that will reduce the dwell time and render the agent less effective.

a. To minimize odor, squeeze PeridoxRTU (do not use spray triggers) directly onto wipes and/or mop head to reduce odor. Cleaning agents must be applied to the applicator, not to the target surface.
b. Apply only the amount of PeridoxRTU needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time per product label instructions.
c. If excess PeridoxRTU is unintentionally applied, use a dry wipe, suitable for the controlled environment, to absorb the excess.

ii. Cleaning and disinfecting are performed as separate steps, cleaning is performed prior to disinfecting.

iii. After the application of the cleaning agent, the agent (PeridoxRTU) is allowed to dwell, or maintain a wet contact time, for the minimum duration of 3 minutes as specified by the manufacturer and published data to ensure full bactericidal, fungicidal, virucidal, and/or sporicidal action.

iv. Daily cleaning and disinfecting occur on days when compounding occurs. If compounding does not occur for more than 24 hours (e.g., over a weekend or holiday):

a. Clean and disinfect the sink(s) before initiating hand hygiene and garbing
b. Complete daily cleaning and disinfecting prior to the start of compounding on the day compounding resumes.

v. Cleaning and disinfection of the inside of a PEC and any equipment housed and used inside a PEC occurs prior to and at the conclusion of daily and/or shift compounding.

b. Cleaning, and Applying Disinfectants in the PEC

i. Inspect the inside of the PEC for any spills or puddles of crystallized compounding components. If needed, remove visible particles, debris, or residue with an appropriate solution (e.g., Sterile Water for Injection or Sterile Water for Irrigation) using sterile, low-lint wipers.

ii. **For cleaning and disinfecting:** Use a sterile low-lint wiper and apply PeridoxRTU (a sterile cleaning agent) followed by sterile IPA 70% (a sterile disinfecting agent).

iii. Begin cleaning activity within the LAFW environment moving outward working from top to bottom and inner to outer surface. Note: Apply only the amount of PeridoxRTU needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time (3 minutes). Do not use spray triggers at any time on the HEPA filter with any cleaning or disinfectant solution. Carefully clean the HEPA grills. Order of cleaning of surfaces inside any PEC is as follows:

a. Ceiling inside the PEC which contains the HEPA filters in vertical flows

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

b. Back surface which contains the HEPA filters in horizontal flows being careful not to splash the HEPA filter while cleaning the diffuser or protective screen.
c. Sides (left and right) as well as IV bar and hangers
d. Anything on the deck (work surface of the PEC)
e. Deck itself

iv. Ensure the wet contact time (3 minutes) specified by the manufacturer is achieved. If necessary, reapply to maintain a properly wet surface in order to achieve desired results.

v. After the application of cleaning, disinfecting, agent inside PEC, apply sIPA 70% to equipment and all interior surfaces to remove residue.

vi. Allow the surface to dry completely before beginning compounding. If daily cleaning was performed the night before, at the start of each new workday, the LAFW must be wiped down with a wipe wetted with sterile 70% IPA **(see Section 4c)**.

c. Use of Sterile 70% IPA inside of a PEC

i. Do not spray cleaning solutions, including sIPA, inside of a PEC to avoid deteriorating the integrity of the HEPA filter. Wet a sterile low-lint wiper with sIPA 70% and apply directly with mechanical/manual action to the interior hood surfaces and equipment.
ii. Apply sIPA 70% to the horizontal work surface of each PEC and allow to dry before compounding:
    a. Immediately before initiating compounding or a new compounding process.
    b. At least every 30 minutes if the compounding process takes 30 minutes or less.
    c. After completing a compounding process if the process takes more than 30 minutes.

d. Other Cleaning Considerations

i. Clean high touch surfaces outside of PECs on a daily basis including but not limited to:

High Touch Surfaces*
• Horizontal work surfaces, tables, counters, or carts • Chair seats, arms, and backs • Keyboards/keypads, mouse, RF scanner, touch screen monitors or tablets • Telephones and other communication devices • Light switches, door handles or hands-free activator • Sink surfaces, drain, and faucet • Gowning bench and garb storage handles

ii. Cleaning, and disinfecting does not take place while active compounding is occurring.

iii. Perform cleaning from cleaner to dirtier areas (e.g. ISO 5, ISO 7, and then ISO 8 areas) therefore, the of the primary engineering controls (ISO Class 5 area) is cleaned first followed by the ISO Class 7 buffer area followed by the ISO Class 8 ante-area then general pharmacy preparation area.

iv. For all sites, clean and disinfect as needed after spills and when surface contamination (e.g., splashes) is known or suspected.

v. Replace all garb after cleaning and prior to resuming compounding duties; repeat hand hygiene and replace sterile gloves before returning to compounding.

vi. Use appropriate respiratory support and eye protection when applying a sporicidal agent to surfaces within the compounding area, including the following cleaning tasks:
   a. Walls, ceilings, and floors.
   b. Surfaces outside of PECs.

e. Selection and Use of Cleaning Agents

i. Select and use cleaning and disinfecting agents with careful consideration of compatibilities, effectiveness, and user safety including, but not limited to, antimicrobial activity, inactivation by organic matter, residue, shelf life, preparation requirements of the agent, and suitability for surfaces being disinfected.

ii. Use of ready-to-use and one-step disinfectant cleaner solutions is preferred over those requiring dilution or separate cleaning and disinfection steps.

iii. Clean and disinfect sterile cleaning agent containers prior to introduction into the ISO 5 environment **(P-0801)**.

iv. Sterile cleaning and disinfecting supplies (e.g., closed containers of sterile wipers, bottles of 70% sterile IPA) can be used for up to 30 days once opened. Permanently and legibly write or label the expiration date on all cleaning supplies. Date opened, expiration date, and individual's initials but be clearly notated.

v. Store opened packages of sterile wipes inside of the PEC; if removed from a PEC once opened, they are no longer considered sterile and can only be used in ISO Class 7 and 8 areas.

vi. Disinfect sterile cleaning solution bottles stored outside of a PEC prior to introduction and use inside of the PEC with sIPA 70% **(P-0801)**.

vii. Use sterile cleaning and disinfecting agents in all classified areas including PECs and SECs.

f. Selection and Use of Cleaning Supplies and Tools

i. Use only sterile cleaning supplies (pads, mop heads) and stainless-steel tools inside a PEC; clean and disinfect stainless steel tools prior to use (e.g., tool handles and holders).

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

ii. Dedicated reusable cleaning tools (e.g. mop frames and handles) are to remain in specific classified areas.
   a. Dedicated mop frames are available in buffer and ante rooms and should never be removed. If removed following procedure **(P-0901)** for the introduction of equipment into the cleanroom.
   b. Dispose of elements of cleaning tools (pads, mop-heads) in a method that minimizes the chance of dispersing contaminants in the air.

iii. Cleaning and disinfecting supplies such as wipers, sponges, pads, and mop heads are made of low lint materials and are disposable.
   a. Disposable cleaning supplies are discarded after each use.
   b. Reusable cleaning tool components are made of cleanable materials that are nonporous (excluding wood) are cleaned and disinfected before and after each use.

iv. Clean compounding equipment used (e.g., mortar and pestle, cylinders, beakers, stir bars, etc.) as soon as possible after compounding is completed.

v. Use the dedicated sink located in the non-classified general pharmacy/lab area for cleaning compounding equipment and supplies.

g. Documentation of Cleaning

i. Document all cleaning, disinfecting, and application of sporicidal disinfectants electronically within Simplfi 797 or on form **(F-0702)** in the event of system downtime (see **P-1802**) after completion of the task by the personnel performing the work. Detailed cleaning records are retained and readily accessible.

Section Name: Cleaning, Disinfecting, and Applying Sporicidal Disinfectants	Policy Name: Monthly Cleaning and Disinfecting Sterile Compounding Areas
Policy Number/ Version: P-0702.1	Last Revision/Review Date: 12/31/2024

1. Overview and Scope

a. This policy describes the procedures for daily cleaning and disinfecting compounding areas where Compounded Preparations (CSP) are prepared within Source Pharmacy.
b. Surfaces in classified areas and segregated compounding areas are potential sources of microbial contamination. In order to reduce the risk of contact contamination, surfaces within classified areas used to prepare Category 1 and Category 2 are cleaned, disinfected, and have sporicidal disinfectants applied according to the processes and frequencies described in this procedure.
    a. **Cleaning** involves removing organic and inorganic materials (e.g., dirt, debris, microbes, and residual drugs or chemicals) form surfaces with the use of a cleaning agent and manual or mechanical action.
    b. **Disinfecting** involves using a chemical or physical agent on surfaces to destroy microorganisms including fungi, viruses, and bacteria.
    c. **Sporicidal disinfectants** are a chemical or physical agent that destroys all vegetative microorganisms including bacterial and fungal spores while applied at a sufficient concentration and for a specified "wet" contact time.
    d. **Sterile 70% isopropyl alcohol (sIPA)** is a staple in day-to-day compounding activities and plays a critical role in sanitizing and reducing the bioburden on gloved hands, surfaces, and materials through both chemical application and physical wiping. sIPA, however, is not a cleaning or disinfecting agent. While it does have some disinfectant properties, it does not possess the broad-spectrum coverage of cleaning, disinfecting, or sporicidal agents and requires a lengthy (and impractical) contact time to truly convey bactericidal or fungicidal activity.

2. Policy

a. Cleaning and disinfecting of all surfaces inside compounding areas, including sinks, as well as the application of a sporicidal disinfectant occur on a regular basis and at a minimum frequency as specified in *USP <797> Pharmaceutical Compounding – Sterile Preparations 2022* and according to this policy **(see Section 4a)**.
b. Surfaces in compounding areas are cleaned daily prior to being disinfected with an EPA-registered (or equivalent outside of the US) agent. An EPA-registered (or equivalent) one-step disinfectant cleaner is an appropriate alternative that allows for both processes to occur in one step.
c. Sporicidal disinfecting agents are EPA-registered (or equivalent outside of the US) and allow for cleaning, disinfecting, and sporicidal activity concurrently in a single step.
d. Manufacturer's directions or published data for the minimum wet contact time is followed for each of the cleaning, disinfecting, and sporicidal agents used to ensure the agents have full microbial destroying action.
e. If compounding (and cleaning) is not performed each day, cleaning and disinfecting is completed before reinitiating compounding.
f. Cleaning and sanitizing is repeated when spills occur and when surfaces are visibly soiled.
g. All personnel involved in cleaning and disinfecting of classified compounding and segregated compounding areas receive training and demonstrate competency in Hand Hygiene and Garbing **(P-0301)** initially and at least annually. Refresher training is provided as needed and when changes in procedures or agents occur.

h. All cleaning and disinfecting activities are performed by appropriately garbed personnel using facility-approved agents and procedures including frequency, method, and location of cleaning activity.
i. Sterile cleaning agents are used to clean the interior of, and all equipment housed inside of PECs. Sterile cleaning agents are also used to clean SECs.
j. Cleaning agents and supplies used in PECs and SECs are assigned an expiration (or "in-use") date once opened or prepared; expiration dates are clearly and permanently written on the bottle, container, or wrapping of the supply and do not exceed manufacturer expiration dates or recommended "in-use" dates.

Cleaning Agent or Supply	Location Used	Expiration Date* (from initial puncture, use, or preparation)
Ready-to-Use (RTU) STERILE Cleaning, Disinfecting, and Sporicidal Agents	Inside PECs	30 Days
STERILE Premoistened or Low-Lint Dry Wipes	Inside PECs	30 Days unless wipes appear dry

k. Safety Data Sheets (SDSs) are retained for all cleaning supplies, included in training of cleaning personnel, and are readily retrievable by all compounding staff members.
l. Since cleaning solutions are irritants and can damage the skin and eyes, safety glasses must be worn during cleaning of ceiling and walls; during mixing of cleaning agents and on other occasions when there is an increased likelihood of splashing or dripping of solution.
m. Compounding equipment (i.e. automated compounders, devices or pumps) placed into ISO Class 5 PECs are subject to the same cleaning requirements as the LAFW, BSC, CACI or CAI itself. These devices must be moved during daily cleaning so that the surface underneath may be cleaned and disinfected.

3. Roles & Responsibilities

a. The Designated Person(s) (DP):

i. Ensures cleaning staff receives appropriate training and maintains current cleaning and related competencies.
ii. Oversees selection of appropriate EPA-registered cleaning, disinfecting, and sporical agents and ensures staff understands and adheres to appropriate dwell times for each agent.
iii. Ensures the organization or facility maintains a current SDS for each cleaning agent in a readily retrievable format and location and ensures cleaning personnel understand how to access and use the SDS in case of a spill or accident.
iv. Determines appropriate remedial cleaning requirements for ad hoc and out-of-specification occurrences up to and including a triple clean of effected compounding areas including the following circumstances:
    a. Actionable environmental findings from total particle counts, viable air sampling, or surface sampling results and/or trends.
    b. Scheduled and unscheduled power and/or airflow disruptions directly impacting sterile compounding area(s).
    c. Certification of sterile compounding area(s).

i. Cleaning activities occur from cleanest to dirtiest areas. When performing cleaning, wipe from top to bottom in overlapping strokes so that the surface is thoroughly wetted but not dripping. Allow the cleaning agent PeridoxRTU (sporicidal agent) to dwell for 3 minutes and to dry on its own and disinfecting agent (sterile 70% IPA) to dry on its own. Do not wipe off or dry the surface since that will reduce the dwell time and render the agent less effective.
    a. To minimize odor, squeeze PeridoxRTU (do not use spray triggers) directly onto wipes and/or mop head to reduce odor. Cleaning agents must be applied to the applicator, not to the target surface.
    b. Apply only the amount of PeridoxRTU needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time per product label instructions.
    c. If excess PeridoxRTU is unintentionally applied, use a dry wipe, suitable for the controlled environment, to absorb the excess.

ii. Cleaning and disinfecting are performed as separate steps, cleaning is performed prior to disinfecting.

iii. After the application of a cleaning agent, or sporicidal disinfectant (PeridoxRTU), is allowed to dwell, or maintain a wet contact time, for the minimum duration of 3 minutes as specified by the manufacturer or published data to ensure full bactericidal, fungicidal, virucidal, and/or sporicidal action.

iv. Daily cleaning and disinfecting occurs on days when compounding occurs. If compounding does not occur for more than 48 hours (e.g., over a long weekend or holiday):
   a. Clean and disinfect the sink(s) before initiating hand hygiene and garbing
   b. Complete daily cleaning and disinfecting prior to the start of compounding on the day compounding resumes.

v. Monthly cleaning and application of sporicidal disinfectant (PeridoxRTU) occurs approximately every 30 days, whenever possible, to ensure a regular and consistent cleaning schedule and is completed as one continuous process.

vi. Cleaning and disinfection of the inside of a PEC and any equipment housed and used inside a PEC occurs prior to and at the conclusion of daily and/or shift compounding.

b. Cleaning, Disinfecting, and Applying Sporicidal Disinfectants in the PEC

i. If needed, remove visible particles, debris, or residue with an appropriate solution (e.g., Sterile Water for Injection or Sterile Water for Irrigation) using sterile, low-lint wipers.

ii. **For cleaning and disinfecting:** Use a sterile low-lint wiper and apply PeridoxRTU (a sterile cleaning agent) followed by a sterile IPA 70% a (disinfecting agent).

iii. Begin cleaning activity within the LAFW environment moving outward working from top to bottom and inner to outer surface. **Note:** Apply only the amount of PeridoxRTU needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time (3 minutes). Do not use spray triggers at any time on the HEPA filter with any cleaning or disinfectant solution. Carefully clean the HEPA grills. Order of cleaning of surfaces inside any PEC is as follows:
   a. Ceiling inside the PEC which contains the HEPA filters in vertical flows.
   b. Back surface which contains the HEPA filters in horizontal flows being careful not to splash the HEPA filter while cleaning the diffuser or protective screen.
   c. Sides (left and right) as well as IV bar and hangers.
   d. Anything on the deck (work surface of the PEC).
   e. Deck itself.

iv. Ensure the wet contact/dwell time (3 minutes) specified by the manufacturer is achieved. If necessary, reapply to maintain a properly wet surface in order to achieve desired results.

v. After the application of cleaning, disinfecting, agent inside PEC, apply sIPA 70% to equipment and all interior surfaces to remove residue.

vi. Allow the surface to dry completely before beginning compounding. If daily cleaning was performed the night before, at the start of each new workday, the LAFW must be wiped down with a wipe wetted with sterile 70% IPA **(see Section 4i)**.

vii. **For application of a sporicidal disinfectant:** After cleaning and disinfecting, apply a sterile sporicidal disinfectant (PeridoxRTU) using a sterile low-lint wiper to all equipment, interior surfaces; since PeridoxRTU (the sporicidal disinfectant is an EPA-registered) is a one-step disinfectant sporicidal cleaner, separate cleaning and disinfecting steps are not required.

viii. Ensure the wet contact time of 3 minutes as specified by the manufacturer is achieved. If necessary, reapply to maintain a properly wet surface in order to achieve desired results.

ix. After the application of cleaning, disinfecting, and/or sporicidal agent inside PEC, apply sIPA 70% to equipment and all interior surfaces to remove residue.

x. Allow the surface to dry completely before beginning compounding. If daily cleaning was performed the night before, at the start of each new workday, the LAFW must be wiped down with a wipe wetted with sterile 70% IPA **(see Section 4i)**.

c. Use of Sterile 70% IPA inside of a PEC

i. Do not spray cleaning solutions, including sIPA, inside of a PEC to avoid deteriorating the integrity of the HEPA filter. Wet a sterile low-lint wiper with the cleaning solution or sIPA and apply directly with mechanical/manual action to the interior hood surfaces and equipment.

ii. Apply sIPA 70% to the horizontal work surface of each PEC and allow to dry before compounding:
   a. Immediately before initiating compounding or a new compounding process.
   b. At least every 30 minutes if the compounding process takes 30 minutes or less.
   c. After completing a compounding process if the process takes more than 30 minutes.

d. Other Cleaning Considerations

i. Clean high touch surfaces outside of PECs on a daily basis and all other surfaces plus the high touch surfaces on a monthly frequency, including but not limited to:

High Touch Surfaces*	Other Surfaces

Section Name: Cleaning, Disinfecting, and Applying Sporicidal Disinfectants	Policy Name: Remedial (Triple) Cleaning and Disinfecting Sterile Compounding Areas for Out of Specification Conditions
Policy Number/ Version: P-0703.1	Last Revision/Review Date: 12/31/2024

1. Overview and Scope

i. This policy describes the procedures for cleaning and disinfecting compounding areas where Compounded Preparations (CSP) are prepared within Source Pharmacy when an out of specification condition or remedial (triple) cleaning is required.
   i. As directed by the Designated Person or designee, perform and document remedial cleaning on an as needed basis. Remedial cleaning ranges from cleaning and disinfection to application of a sporicidal disinfectant to triple cleaning effected compounding areas.
   ii. A triple clean consists of two separate and distinct applications of an approved one-step disinfectant cleaner (allowing for full wet contact time between applications) followed by a separate application of an approved sporicidal disinfectant; remove cleaning agent residue with sIPA 70%.
   iii. At a minimum, document purpose, date, and cleaning agent(s) used when conducting remedial cleaning. Ensure remedial cleaning documentation is retained and readily retrievable.

ii. Surfaces in classified areas and segregated compounding areas are potential sources of microbial contamination. In order to reduce the risk of contact contamination, surfaces within classified areas used to prepare Category 1, and Category 2, are cleaned, disinfected, and have sporicidal disinfectants applied according to the processes and frequencies described in this procedure.
   a. **Cleaning** involves removing organic and inorganic materials (e.g., dirt, debris, microbes, and residual drugs or chemicals) form surfaces with the use of a cleaning agent and manual or mechanical action.
   b. **Disinfecting** involves using a chemical or physical agent on surfaces to destroy microorganisms including fungi, viruses, and bacteria.
   c. **Sporicidal disinfectants** are a chemical or physical agents that destroys all vegetative microorganisms including bacterial and fungal spores while applied at a sufficient concentration and for a specified "wet" contact time.
   d. **Sterile 70% isopropyl alcohol (sIPA)** is a staple in day-to-day compounding activities and plays a critical role in sanitizing and reducing the bioburden on gloved hands, surfaces, and materials through both chemical application and physical wiping. sIPA 70%, however, is not a cleaning or disinfecting agent. While it does have some disinfectant properties, it does not possess the broad-spectrum coverage of cleaning, disinfecting, or sporicidal agents and requires a lengthy (and impractical) contact time to truly convey bactericidal or fungicidal activity.

2. Policy

a. Cleaning and disinfecting of all surfaces inside compounding areas, including sinks, as well as the application of a sporicidal disinfectant occur on a regular basis and at a minimum frequency as specified in USP <797> Pharmacecutical Compounding – Sterile Preparations 2022 and according to this policy **(see Section 4a).**
b. Surfaces in compounding areas are cleaned prior to being disinfected with an EPA-registered (or equivalent) agent. An EPA-registered (or equivalent) one-step disinfectant cleaner is an appropriate alternative that allows for both processes to occur in one step.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.
©2025 Source Pharmacy. All rights reserved

c. Sporicidal disinfecting agents are EPA-registered (or equivalent) and allow for cleaning, disinfecting, and sporicidal activity concurrently in a single step.
d. Manufacturer's directions or published data for the minimum wet contact time is followed for each of the cleaning, disinfecting, and sporicidal agents used to ensure the agents have full microbial destroying action.
e. If compounding (and cleaning) is not performed each day, cleaning and disinfecting is completed before reinitiating compounding.
f. Cleaning and sanitizing is repeated when spills occur and when surfaces are visibly soiled.
g. All personnel involved in cleaning and disinfecting of classified compounding and segregated compounding areas receive training and demonstrate competency in Hand Hygiene and Garbing **(P-0301)** initially and at least annually. Refresher training is provided as needed and when changes in procedures or agents occur.
h. All cleaning and disinfecting activities are performed by appropriately garbed personnel using facility-approved agents and procedures including frequency, method, and location of cleaning activity.
i. Sterile cleaning agents are used to clean the interior of, and all equipment housed inside of PECs. Sterile cleaning agents are also used to clean SECs.
j. Cleaning agents and supplies used in PECs and SECs are assigned an expiration (or "in-use") date once opened or prepared; expiration dates are clearly and permanently written on the bottle, container, or wrapping of the supply and do not exceed manufacturer expiration dates or recommended "in-use" dates.

Cleaning Agent or Supply	Location Used	Expiration Date* (from initial puncture, use, or preparation)
Ready-to-Use (RTU) STERILE Cleaning, Disinfecting, and Sporicidal Agents	Inside PECs	30 Days
STERILE Premoistened or Low-Lint Dry Wipes	Inside PECs	30 Days unless wipes appear dry

k. Safety Data Sheets (SDSs) are retained for all cleaning supplies, included in training of cleaning personnel, and are readily retrievable by all compounding staff members.
l. Since cleaning solutions are irritants and can damage the skin and eyes, safety glasses must be worn during cleaning of ceiling and walls; during mixing of cleaning agents and on other occasions when there is an increased likelihood of splashing or dripping of solution.
m. Compounding equipment (*i.e. automated compounders, devices or pumps*) placed into ISO Class 5 PECs are subject to the same cleaning requirements as the LAFW itself. These devices must be moved during daily cleaning so that the surface underneath may be cleaned and disinfected

3. Roles & Responsibilities

a. Designated Person(s) (DP):

i. Ensures cleaning staff receives appropriate training and maintains current cleaning and related competencies.

ii. Oversees selection of appropriate EPA-registered cleaning, disinfecting, and sporical agents and ensures staff understands and adheres to appropriate dwell times for each agent.
iii. Ensures the organization or facility maintains a current SDS for each cleaning agent in a readily retrievable format and location and ensures cleaning personnel understand how to access and use the SDS in case of a spill or accident.
iv. Determines appropriate remedial cleaning requirements for ad hoc and out-of-specification occurrences up to and including a triple clean of effected compounding areas including the following circumstances:
    a. Actionable environmental findings from total particle counts, viable air sampling, or surface sampling results and/or trends.
    b. Scheduled and unscheduled power and/or airflow disruptions directly impacting sterile compounding area(s).
    c. Certification of sterile compounding area(s).
    d. New or major construction or maintenance work performed within or adjacent to the sterile compounding area(s).

b. Compounding personnel:

i. Undergo training and demonstrate competency initially and at least once annually in skills and competencies related to cleaning and disinfecting **(F-0212)**.
ii. Adhere to all cleaning procedures **(P-0701-0703)** including cleaning agent selection, frequency, method, and sequence of cleaning activities (i.e., cleanest to dirtiest).
iii. Ensure appropriate use of sterile 70% IPA before, during, and after the compounding process.
iv. Complete timely documentation of all cleaning activities performed.

i. Cleaning activities occur from cleanest to dirtiest areas. When performing cleaning, wipe from top to bottom in overlapping strokes so that the surface is thoroughly wetted but not dripping. Allow the cleaning agent PeridoxRTU (sporicidal agent) to dwell for 3 minutes and to dry on its own and disinfecting agent (sterile 70% IPA) to dry on its own. Do not wipe off or dry the surface since that will reduce the dwell time and render the agent less effective.

   a. To minimize odor, squeeze PeridoxRTU (do not use spray triggers) directly onto wipes and/or mop head to reduce odor. Cleaning agents must be applied to the applicator, not to the target surface.
   b. Apply only the amount of PeridoxRTU needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time per product label instructions.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.

c. If excess PeridoxRTU is unintentionally applied, use a dry wipe, suitable for the controlled environment, to absorb the excess.

ii. Cleaning and disinfecting are performed as separate steps, cleaning is performed prior to disinfecting.

iii. After the application of a cleaning agent, or sporicidal disinfectant (PeridoxRTU), is allowed to dwell, or maintain a wet contact time, for the minimum duration of 3 minutes as specified by the manufacturer or published data to ensure full bactericidal, fungicidal, virucidal, and/or sporicidal action.

b. Cleaning, Disinfecting, and Applying Sporicidal Disinfectants in the PEC

i. If needed, remove visible particles, debris, or residue with an appropriate solution (e.g., Sterile Water for Injection or Sterile Water for Irrigation) using sterile, low-lint wipers.

ii. **For cleaning and disinfecting:** Use a sterile low-lint wiper and apply PeridoxRTU (a sterile cleaning agent) followed by a sterile IPA 70% a (disinfecting agent).

iii. Begin cleaning activity within the LAFW environment moving outward working from top to bottom and inner to outer surface. Note: Apply only the amount of PeridoxRTU Plus needed to clean the immediate area, while ensuring the applicator is sufficiently wet to facilitate achievement of dwell time (3 minute). Do not use spray triggers at any time on the HEPA filter with any cleaning or disinfectant solution. Carefully clean the HEPA grills. Order of cleaning of surfaces inside any PEC is as follows:

a. Ceiling inside the PEC which contains the HEPA filters in vertical flows.
b. Back surface which contains the HEPA filters in horizontal flows being careful not to splash the HEPA filter while cleaning the diffuser or protective screen.
c. Sides (left and right) as well as IV bar and hangers.
d. Anything on the deck (work surface of the PEC).
e. Deck itself.

iv. Ensure the wet contact/dwell time (3 minutes) specified by the manufacturer is achieved. If necessary, reapply to maintain a properly wet surface in order to achieve desired results.

v. After the application of cleaning, disinfecting, agent inside PEC, apply sIPA 70% to equipment and all interior surfaces to remove residue.

vi. Allow the surface to dry completely before beginning compounding. If daily cleaning was performed the night before, at the start of each new workday, the LAFW must be wiped down with a wipe wetted with sterile 70% IPA **(see Section 4c).**

a. **For application of a sporicidal disinfectant:** After cleaning and disinfecting, apply a sterile sporicidal disinfectant (PeridoxRTU) using a sterile low-lint wiper to all equipment, interior surfaces; since PeridoxRTU (the sporicidal disinfectant is an EPA-registered) is a one-step disinfectant sporicidal cleaner, separate cleaning and disinfecting steps are not required. Ensure the wet contact time of 3 minutes as specified by the manufacturer is achieved. If necessary, reapply to maintain a properly wet surface in order to achieve desired results.

vii. After the application of cleaning, disinfecting, and/or sporicidal agent inside PEC, apply sIPA 70% to equipment and all interior surfaces to remove residue.

viii. Allow the surface to dry completely before beginning compounding. If daily cleaning was performed the night before, at the start of each new workday, the LAFW must be wiped down with a wipe wetted with sterile 70% IPA **(see Section 4c)**.

c. Use of Sterile 70% IPA inside of a PEC

i. Do not spray cleaning solutions, including sIPA 70%, inside of a PEC to avoid deteriorating the integrity of the HEPA filter. Wet a sterile low-lint wiper with the cleaning solution or sIPA 70% and apply directly with mechanical/manual action to the interior hood surfaces and equipment.

ii. Apply sIPA 70% to the horizontal work surface of each PEC and allow to dry before compounding:
   a. Immediately before initiating compounding or a new compounding process.
   b. At least every 30 minutes if the compounding process takes 30 minutes or less.
   c. After completing a compounding process if the process takes more than 30 minutes.

d. Other Cleaning Considerations

i. Clean high touch surfaces outside of PECs, including but not limited to:

High Touch Surfaces*	Other Surfaces
• Horizontal work surfaces, tables, counters, or carts • Chair seats, arms, and backs • Keyboards/keypads, mouse, RF scanner, touch screen monitors or tablets • Telephones and other communication devices • Light switches, door handles or hands-free activator • Sink surfaces, drain, and faucet • Gowning stool and storage bins	• Exterior of PECs • Legs, underside of horizontal surfaces, and feet/wheels of work surfaces, tables, counters, carts, chairs, or benches • Trash bins and hazardous waste disposal containers • Doorframes, window ledges, and other irregular surfaces •

ii. Cleaning, disinfecting, and the application of a sporicidal agent does not take place while active compounding is occurring.

iii. Perform cleaning from cleaner to dirtier areas (e.g. ISO 5, ISO 7, and then ISO 8 areas) therefore, the of the primary engineering controls (ISO Class 5 area) is cleaned first followed by the ISO Class 7 buffer area followed by the ISO Class 8 ante-area then general pharmacy preparation area.

iv. For all sites, clean and disinfect as needed after spills and when surface contamination (e.g., splashes) is known or suspected.

v. Replace all garb after cleaning and prior to resuming compounding duties; repeat hand hygiene and replace sterile gloves before returning to compounding.

f. Selection and Use of Cleaning Agents

i. Select and use cleaning and disinfecting agents with careful consideration of compatibilities, effectiveness, and user safety including, but not limited to, antimicrobial activity, inactivation by organic matter, residue, shelf life, preparation requirements of the agent, and suitability for surfaces being disinfected.

Permanently and legibly write or label the expiration date on all cleaning supplies. Date opened, expiration date, and individual's initials but be clearly notated.

v. Store opened packages of sterile wipes inside of the PEC; if removed from a PEC once opened, they are no longer considered sterile and can only be used in ISO Class 7 and 8 areas. Disinfect sterile cleaning solution bottles stored outside of a PEC prior to introduction and use inside of the PEC with sIPA 70% per **P-0801.**

vi. Use sterile cleaning and disinfecting agents in all classified areas including PECs and SECs.

g. Selection and Use of Cleaning Supplies and Tools

i. Use sterile cleaning supplies (pads, mop heads) and tools inside; clean and disinfect prior to use (e.g., tool handles and holders).

1. Overview and Scope

a. This policy describes the handling, storage, packaging, shipping, and transportation requirements and procedures for Compounded Sterile Preparations (CSPs) prepared at Source Pharmacy for patients that reside outside the state of Florida.

b. CSP quality and integrity can be adversely affected by inappropriate handling, storage, packaging, shipping, & transport methods. Care and consideration are given to the determination and selection of these methods and personnel and/or vendors to carry out these duties. Proper training, processes, quality assurance and control measures are integral to maintaining the quality of CSP during these processes.

2. Policy

a. Personnel handling, packaging, and shipping CSPs are trained in the knowledge and skills needed to perform job-related responsibilities. Refer to Sterile Compounding Personnel Training & Evaluation policy **(P-0204)** for further information.

b. CSPs are handled in a manner that maintains CSP quality and packaging integrity and are stored in temperature-controlled designated storage areas to ensure storage temperatures remain within the appropriate range prior to packaging and shipping.

c. Designated CSP storage area temperatures are monitored continuously via STAT Temp unless downtime procedures have been enacted, then the manual forms will be used.

d. CSP packaging materials protect CSPs from damage, leakage, contamination, degradation, and adsorption as well as prevent accidental exposure to transport personnel.

e. Tamper-evident closures are used for all CSPs shipped outside of Source Pharmacy.

f. Light-resistant packaging materials are used for light-sensitive CSPs.

g. Shipping and transportation methods and vendors are selected that reasonably and reliably deliver properly packaged CSPs in an undamaged, sterile, and stable condition.

h. CSPs delivered or shipped outside of Source Pharmacy bear the appropriate visible and legible labeling on the outer packaging or container conveying in-transit storage requirements, special handling instructions (if applicable), and immediate storage requirements (if appropriate) upon receipt. Refer to the Labeling of CSPs policy **(P-1301)** for further information.

3. Roles & Responsibilities

a. **Designated Person(s) (DP):**

i. Provides appropriate training and competency evaluations for personnel performing CSP handling, storage, packaging, and transport.

ii. Ensures CSP storage locations are appropriately monitored, and temperature is recorded daily or readily accessible.

iii. Researches CSP stability and integrity when drug storage temperature excursions occur and determine if CSPs have retained quality and can be dispensed or must be destroyed due to a lack of uncertainty in the available stability and sterility data in the event of an excursion.

iv. Ensures packaging procedures and materials are appropriate to help retain the quality of the CSP.

d. Tamper-evident closures are used for all CSPs shipped outside of Source Pharmacy.

e. Light-resistant packaging materials are used for light-sensitive CSPs.

f. Shipping and transportation methods and vendors are selected that reasonably and reliably deliver properly packaged CSPs in an undamaged, sterile, and stable condition.

g. CSPs delivered or shipped outside of Source Pharmacy bear the appropriate visible and legible labeling on the outer packaging or container conveying in-transit storage requirements, special handling instructions (if applicable), and immediate storage requirements (if appropriate) upon receipt. Refer to the Labeling of CSPs policy **(P-1301)** for further information.

c. **Third Party Delivery and Shipping Vendors:**
   i. Maintain appropriate CSP storage conditions during transit per labeling and delivery or shipping instructions.

4. Procedures

a. **Order/Data Entry**
   i. Upon receipt of a prescription for an out-of-state patient the data entry personnel will, enter the requested shipping method in the "Delivery Hand-Off Method" field within Pharmetika. In the event a method is not notated on the original prescription the employee will contact the patient to discuss options.
   ii. Should additional details or special instructions be required, they will be entered in the appropriate note section for the prescription in order to facilitate communication with the personnel responsible for preparing the final shipment.

b. **CSP Packaging/Shipping Preparation**
   i. Only medication/prescriptions that have been through the complete dispensing process in Pharmacist verification steps 1 and 2 can be packaged and prepared for shipping.
   ii. Packaging/storage conditions are clearly indicated on all patient prescription labels. This information was determined by utilizing all information available about a product or compounded preparation e.g., product package insert, compounded preparation-USP, to determine shipping precautions to maintain the integrity of the product or compounded preparation.
   iii. Place the medication in the appropriate shipping container. Select packing containers and materials based on product/ preparation specifications, experience, vendor requirements, mode of transportation, prevention of unintended exposure to transport personnel and that are expected to:
      a. Maintain physical integrity
      b. Sterility
      c. Stability of the compounded preparation during transit
      d. Protect from light if required
      e. Protect from temperature fluctuations
      f. Protect from adsorption

      i. Protect from contamination
      j. Protect from degradation
      k. Protect transport personnel from harm
      l. Protect recipients from harm
   iv. Pack compounded preparations according to the storage requirements and special packaging requirements in the preparation's Master Formula Record, SOP: Basic Compounding Documentation—The Master Formula Form.
      a. If colder than controlled room temperature is required for storage of a finished preparation then use a cold method to ship.
      b. The designated responsible person will determine if a temperature monitoring device is placed in the packaging container used to ship finished preparations.

   a. Delivery of the compound preparation is in undamaged and stable condition.
   b. Expected delivery date
   c. Climate conditions in transit
      i. A compounded preparation transit temperature cannot exceed the warmest specified temperature range on its label.
      ii. When common carriers are used, refrigerated products should use an exterior "Refrigerate" marking.
   d. Protection against over shaking
   e. Specific handling instructions when stability is a concern.

ii. Complete a shipping label to include the pharmacy's name and address on the label and the patient's name/third party recipient and mailing information, confirming that the shipping label information is correct.

ii. No shipment of temperature sensitive medication will be processed the day preceding a National Holiday, unless confirmation can be obtained that service level required is available for the recipient's address.

iii. All Friday shipments must be reviewed to prevent shipments being handled/stored by the 3rd party carrier over the weekend and to ensure no disruption of therapy will occur as a result of these restrictions.

iv. If appropriate, notify the patient/third party recipient when they may expect their prescription/preparation.

For Internal Use Only—Not for External Distribution. This document is the property of Source Pharmacy. It contains proprietary and confidential information.

v. Request delivery confirmation from the courier company on a periodic basis to ensure packages are arriving on time and in useable condition. Include delivery confirmation as a monitoring index for quality assurance.

vi. Request that the patient notify the pharmacy if the prescription is not received with the expected timeframe.

f. Quality assurance

i. Periodically review the delivery performance of the courier company. A monitoring index is included in the Investigation Forms and will be periodically reviewed, at least annually, for Performance.

ii. Periodically review the delivery performance of shipments that require special treatment i.e. heat sensitive, cold sensitive. A monitoring index is included in the Investigation Form and will be periodically reviewed, at least annually for performance e.g., semi-annually ship to self or check with recipient and document result, one time each in the summer (warmest time) and winter (coldest time).

iii. If a temperature sensitive indicator is used, develop an education sheet to be sent with the delivery to the end user explaining the interpretation process for success or failure of a temperature sensitive indicator and therefore the state of the product/ preparation.

iv. Consider developing a set of questions to quiz the end user about the arrival condition of the shipping container if the quality assurance process includes speaking to the end user. This will aid in the evaluation of the success or failure of the shipped process.

Sterile Compounding Personnel Records Review

Select personnel with compounding responsibilities for your records review; preferably select staff performing compounding duties at time of inspection or staff identified during CR review.
- Recommend also pulling supervising personnel file.
- Inspector can consider pulling non-compounder employee file ("Other") who cleans and stocks compounding area but who does not compound (Note: frequency of competency assessment will be defined by pharmacy SOPs).
Review five (5) personnel files and document your observations. (For applicants seeking a Class E-S Non-Resident Sterile Compounding inspection (Texas Sampling), review a total of 10 personnel records.)
- *Note: long-term employees may not have initial training available, if this is the case, you may select an alternative file. If an alternate file is not available, document length of service of long-term employee.
Inspector Note: soybean casein digest medium and trypticase soy broth are the same media.

Inspector Instructions	Demonstrating Knowledge and Competency of Core Skills (Section 2.1)
1. Use the drop-down list and make the appropriate selection for the Employee Title, Personnel Function, and CSP Category Type for the files reviewed. *Do not record the employee name, only the title or position. 2. Review the selected files to verify that the required training and competency records are present in the personnel file and comply with USP <797> standards for training and demonstrated competency. 3. Select the appropriate response for each item reviewed. -Select "Yes" if the document is present in the records and the competency evaluation was conducted in compliance USP <797> standards. -Select "No" if the document is present but is not compliant with USP <797> standards (eg, incorrect frequency of test, GFT and surface sample was not conducted after media-fill, failed tests did not include a corrective action, etc). Document the area(s) of non-compliance in the notes column. -Select "Missing" if the document is not present in the file. -Select "N/A" if the training does not apply, eg, long-term employees may not have initial training available. Document further in the notes column. 4. Use the notes column to document any pertinent information.	USP requirements: 1. Personnel who perform or oversee compounding *or support activities* must be trained in the SOPs and trained on maintaining the quality of the environment (See Table 2). 2. Compounding personnel and supervising personnel must complete training needed to demonstrate knowledge of principles and competency of skills for performing sterile manipulations and achieving and maintaining appropriate environmental conditions (See Table 2 and Table 3). This must be completed initially and every 12 months in at least the following areas: -Hand hygiene -Garbing -Cleaning and disinfection -Calculations, measuring, and mixing -Aseptic technique -Achieving and/or maintaining sterility (and apyrogenicity if compounding with nonsterile components) -Use of equipment -Documentation of the compounding process (eg, master formulation and compounding records) -Principles of high-efficiency particulate air (HEPA)-filtered unidirectional airflow within the ISO Class 5 area -Proper use of PECs -Principles of movement of materials and personnel within the compounding area 3. Personnel who only perform restocking or cleaning and disinfecting duties outside of the primary engineering control (PEC) must complete ongoing training as required by the facility's SOPs (See Table 3). 4. Personnel compounding only immediate-use CSPs must complete training as required by the facility's SOPs (See Table 3). 5. All training and evaluations must be documented.

The initial three (3) successful completions must be in succession—failure of any of the three (3) initial garbing competency evaluations requires repeat testing until personnel successfully complete three (3) evaluations in a row. 3. The pharmacy uses a microbiological growth media device (eg, plates, paddles, or slides) containing general microbial growth agar (eg, trypticase soy agar [TSA]) supplemented with neutralizing additives (eg, lecithin and polysorbate 80) that supports both bacterial and fungal growth. 4. The media device is incubated at 30°C-35°C for no less than 48h and then at 20°C-25°C for no less than an additional five days. 5. Failure is indicated by visual observation of improper hand hygiene and garbing procedures and/or GFT results that exceed the defined action levels. GLOSSARY USP <797>
ACD: Automated compounding device.
ACPH: Air changes per hour.
Active pharmaceutical ingredient (API): Any substance or mixture of substances intended to be used in the compounding of a preparation, thereby becoming the active ingredient in that preparation and furnishing pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease in humans and animals or affecting the structure and function of the body. Also referred to as *Bulk drug substance*. A conventionally manufactured drug product is not an API but is typically manufactured from an API(s).
Added substance: An ingredient that is necessary to compound a preparation but is not intended or expected to cause a pharmacologic response if administered alone in the amount or concentration contained in a single dose of the compounded preparation. The term is used synonymously with the terms *inactive ingredient, excipient, and pharmaceutical ingredient.*
Administration: The direct application of a sterile product or preparation to a single patient by injecting, infusing, or otherwise providing a sterile product or preparation in its final form.
Airlock: A space with interlocked doors, constructed to maintain air pressure control when items move between two adjoining areas (generally with different air cleanliness standards). The intent of an airlock is to prevent ingress of particulate matter and microbial contamination from a lesser-controlled area.
Alcohol-based hand rub: An alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands of health care personnel to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients, excipients, and humectants.
Allergenic extract compounding area (AECA): A designated space, area, or room that is not required to be classified, with a visible perimeter that is suitable for preparation of allergenic extract prescription sets.
Allergenic extract prescription set: Combinations of licensed allergenic extracts that would be mixed and diluted to provide subcutaneous immunotherapy to an individual patient, even though these allergenic extract combinations are not specified in the approved BLAs for the licensed biological products.
Allergenic extract: A biological substance used for the diagnosis and/or treatment of allergic diseases such as allergic rhinitis, allergic sinusitis, allergic conjunctivitis, bee venom allergy, and food allergy.
Anteroom: An ISO Class 8 or cleaner room with fixed walls and doors where personnel hand hygiene, garbing procedures, and other activities that generate high particulate levels may be performed. The anteroom is the transition room between the unclassified area of the facility and the buffer room.

GLOSSARY USP <797>
Aseptic processing: A method by which separate, sterile components (eg, drugs, containers, or closures) are brought together under conditions that maintain their sterility. The components can either be purchased as sterile or, when starting with nonsterile components, can be separately sterilized prior to combining (eg, by membrane filtration or by autoclave).
Aseptic technique: A set of methods used to keep objects and areas free of microorganisms and thereby minimize infection risk to the patient. It is accomplished through practices that maintain the microbe count at an irreducible minimum.
Assigned trainer: One or more individuals assigned by the designated person(s) to be responsible and accountable for directly providing the training, observation, and/or evaluation of personnel for the preparation of CSPs.
Batch: More than one CSP prepared as described in the MFR in a single, discrete process, and expected to have uniform character and quality, within specified limits.
Beyond-use date (BUD): The date, or the hour and date, after which a CSP must not be used, stored, or transported. The date is determined from the date and time the preparation is compounded.
Biological safety cabinet (BSC), Class II: A ventilated cabinet with an open front and inward and downward unidirectional HEPA-filtered airflow and HEPA-filtered exhaust. A BSC used to prepare a CSP must be capable of providing an ISO Class 5 or better environment for preparation of the CSPs.
Biological safety cabinet (BSC): A ventilated cabinet that may be used for compounding. These cabinets are divided into three general classes (Class I, Class II, and Class III). Class II BSCs are further divided into types (Type A1, Type A2, Type B1, Type B2, and Type C1).
BLA: Biological license application.
Blood components: Any therapeutic constituent of blood separated by physical or mechanical means (eg, white cells, red cells, platelets, plasma, serum). It is not intended to include plasma-derived products (eg, albumin, coagulation factors, immunoglobulins) manufactured under an approved BLA or equivalent.
BMBL: Biosafety in Microbiological and Biomedical Laboratories.
Buffer room: An ISO Class 7 or cleaner room with fixed walls and doors where PEC(s) that generate and maintain an ISO Class 5 environment are physically located. The buffer room may only be accessed through the anteroom or another buffer room.
Bulk drug substance: See the entry for *Active pharmaceutical ingredient.*

Re: State Board Actions

Please note that we have responded "yes" to one of the disciplinary questions on the application. Below, please find full details of state actions involving Almac Clinical Services, LLC (Almac), covering both our Souderton, PA location and our Durham, NC location.

All state board actions are administrative in nature and none of Almac's licenses have been revoked or suspended as a result. It is also important to note that only the Alaska disciplinary action was issued against Almac's pharmacy licenses. All other state discipline was taken against Almac's wholesale licenses; however, we are disclosing full details of all disciplinary history for Almac in the interest of transparency.

Pharmacy Discipline:

Almac PA and Almac NC were the subject of an investigation by the Alaska Board of Pharmacy due to timing of a Pharmacist in Charge (PIC) change notification. This was settled by Almac PA and Alaska in June of 2022 and Almac NC and Alaska in September 2022 with a minimum civil fine. Almac PA and Almac NC continue to hold unrestricted non-resident pharmacy licenses in the state of Alaska.

Wholesale Discipline:

Two separate states (Ohio and Kansas) initiated administrative actions against Almac PA to obtain the out of state wholesale license. These actions were due to application submission timing only and did not involve any incident or action that was deemed harmful to patients within those states. In March 2021 (Ohio) and February 2022 (Kansas), Almac and the Boards of those states resolved the matters by settlement, whereby the Boards issued Wholesale Distributor licenses. As part of the settlements Almac agreed to pay minimal administrative fines.

In August 2023, Almac PA was issued a citation by the State of California. This citation was issued by California during the California wholesale license renewal process, in which Almac appropriately disclosed action taken by the Board of Pharmacy in Kansas for an administrative fine. The citation by California only reiterated the Kansas stipulation and was not issued due to any additional matter within the State of California. In this regard, Almac's License in CA was not restricted in any way, no fine was levied nor was any proof of abatement required.

Should the Board have further questions relating to this matter, please contact us via email at acslicensing@almacgroup.com.
